UNIVERZITET CRNE GORE

ODBORU CENTRA ZA DOKTORSKE STUDIJE

SENATU

Poštovani,

Molim Vas da u skladu sa članom 41 Pravila doktorskih studija Univerziteta Crne Gore, imenujete Komisiju za ocjenu doktorske disertacije pod nazivom: "Somatotipske karakteristike, bazično - motoričke, specifične - motoričke i funkcionalne sposobnosti mlađih fudbalera prema njihovoj poziciji u igri", kandidata mr Malsora Gjonbalaja.

U prilogu Vam dostavljamo Vam dostavljamo:

- D 2 obrazac
- Potvrdu o predaji doktorske disertacije organizacionoj jedinici
- Odluku Vijeća o imenovanju komisije za pregled i ocjenu doktorske disertacije broj 1247 od 18.06.2018.
- Kopiju rada kandidata publikovanog u časopisu sa odgovarajuće liste
- Saglasnost mentora
- Bio-bibliografiju kandidata
- Bio-bibliografije sa odlukama o izbornim zvanjima predloženih članova Komisije

S poštovanjem,

Dekan

Differences in Anthropometric Characteristics, Somatotype Components, and Functional Abilities Among Young Elite Kosovo Soccer Players Based on Team Position

Diferencias en las Características Antropométricas, los Componentes del Somatotipo y las Habilidades Funcionales Entre Jóvenes Futbolistas de Élite de Kosovo Basadas en la Posición en el Equipo

GJONBALAJ, M.; GEORGIEV, G. & BJELICA, D. Differences in anthropometric characteristics, somatotype components, and functional abilities among young elite Kosovo soccer players based on the team position. *Int. J. Morphol.*, 36(1):41-47, 2018.

SUMMARY: The height, weight, diameters, volumes and skin folds were measured on a sample of 242 young soccer players from the Republic of Kosovo and therefore, the body composition, somatotype components, BMI index and maximum oxygen consumption. These were indirectly measured in order to determine their common morphological and functional features and analyze specificity i.e., the likely differences based on the playing positions (goalkeepers, defense, middle players and attackers). Within the statistical analysis, the basic descriptive statistical parameters were calculated, and a multivariate and univariate analysis of variance and post-hoc analysis were applied. Goalkeepers have statistically significantly higher body height and humeral breadth, and lower values of maximum oxygen consumption, in comparison to players who play the other positions on the team and higher body weight regarding the players who play in the middle and the attackers. Defense players have statistically significant higher body weight than the middle players. In the other anthropometric measures and somatotype components, there are no statistically significant differences among the players who play on different positions in the team. The achieved results could serve as normative morphological and functional indicators for regular sports medical examinations of young soccer players in the Republic of Kosovo. They could also be used as a template for comparison of the morphological and functional data of young soccer players at similar level in different countries.

KEY WORDS: Body composition; Morphological and Functional Indicators; Footballers.

INTRODUCTION

Success in sports is directly related to the specific anthropometric characteristics, body composition and somatotype components (Carter & Heath, 1990). During the football match (90 minutes), the movements of the players are characterized with high intensity, short actions and breaks with different duration. Soccer players should have the optimum combination of technical, tactical, physical characteristics (e.g. somatotype), and mental and motivational predispositions (Bangsbo, 1994) among other sports characteristics in order to be successful. Therefore, for football coaches, managers, sports physiotherapist, scientists, an in-depth understanding of the determinants of success, such as the specific anthropometric characteristics of players, may be important. Some research suggest that there are specifics of anthropometric characteristics of the

players who play on different positions in the team (Bale, 1986; Rienzi *et al.*, 2000; Gil *et al.*, 2007). Goalkeepers are taller than the players who play in the middle, such as central defensive and offensive players (Reilly *et al.*, 2000; Gil *et al.*). Similar results were obtained in some studies that researched the specifics of anthropometric characteristics regarding the position at which the player is, as follows: Australian football (Pyne *et al.*, 2006), Gaelic soccer (McIntyre & Hall, 2005), rugby (Bale), American football (Bale; Garstecki *et al.*, 2004), Brazilian football (Fidelix *et al.*, 2014), Ethiopian football (Hailu *et al.*, 2016; Ibrahim *et al.*, 2017) and Macedonian football (Gontarev *et al.*, 2016).

The somatotype components could be measured on the basis of certain anthropometric measures (Carter &

Heath; Reilly & Marfell-Jones, 2003). A somatotype can be defined in terms of its three components: endomorphy, mesomorphy and ectomorphy (Carter & Heath). The combination of these three physical parameters allows the athlete to be classified in different somatotype category. Generally, mesomorphic component dominates at soccer players, and their somatotype category is balanced mesomorphic such as 2.5-5.0-2.5 (Carter & Heath; Rienzi *et al.*).

Having in mind that specialization begins at early age, the understanding of morphological features for each position of the team is pretty much important for coaches, sports physicians, and scientists. The purpose of this paper was to determine the morphological and functional characteristics in soccer players who play in the Junior Super League in Kosovo and to determine the possible differences in the monitored characteristics, regarding the position which the player has.

MATERIAL AND METHOD

Subjects. The study was conducted in the National Center for Sport Medicine (NCSM) in Prishtina, where all active athletes from the Republic of Kosovo are obliged to undergo regular medical and sports examination. Measurements are made in the month of February 2017, when players have the obligatory sports medical examinations.

The sample consisted of 242 young soccer players who play in the best clubs of Junior Super League in Kosovo (U19), age 19 to 21 years old and have at least 5 years sport experience. The sample was divided into four (4) different groups according to the position which players have in the team: 20 goalkeepers ($n = 20$); 84 defense players ($n = 84$); 88 midfielders ($n = 88$) and 50 forwards ($n = 50$). The respondents were treated in accordance with the recommendations of the Helsinki Declaration.

Protocols and equipment. All measurements were conducted by highly skilled, trained and experienced sports doctors. Height and body weight were measured using stadiometer (Seca, Leicester, UK) and electronic weighing machine (HD-351, Tanita, Illinois, USA). Skin folds were measured using John Bull calipers. The volumes are measured with a standard flexible measuring tape, while the diameters are measured using sliding calipers (GPMc).

Besides height and weight, the following anthropometric measures were also measured: two

diameters (femoris breadth and humeral breadth); two circumferences (biceps girth and calf girths), as well as four skin folds (triceps, subscapular, supraspinale and calf skinfold).

The maximum oxygen consumption was measured using standard treadmill exercise testing according to the Bruce protocol which is a sub-maximal treadmill test. Bruce test consists of multiple stages of progressively increasing workloads, which should be performed until the examinee reaches his sub-maximal heart rate. The test includes 7 stages, each lasting for 3 minutes and with each subsequent stage the speed and the inclination of the track is significantly increased. VO_{2max} is calculated from the Bruce nomogram using the exercise time (ET - duration of the test expressed in minutes) and the sex of the examinee.

Statistical Methods. The data were analyzed using the Statistical Package for Social Sciences software (SPSS, v. 22.0 for WINDOWS; SPSS Inc., Chicago, IL, USA), and values of $p < 0.05$ were considered statistically significant. Basic descriptive parameters of anthropometric variables were calculated: arithmetic mean (Mean), standard deviation (SD), minimum and maximum value of the results registered (MIN, MAX). The normality of distribution was verified following the Kolmogor-Smirnov test. The between positions differences were computed by the multivariate and univariate analyses of variance (ANOVA) and LSD test was used as a post-hoc test.

RESULTS

Basic descriptive statistical parameters of anthropometric measures, somatotype components and maximum oxygen consumption of the whole group of respondents are shown in Table I. The results of the analysis indicate that the majority of applied variables are normally distributed.

On multivariate level, statistically significant differences in the researched variables between players who play in different positions on the team are not determined (Table II). On univariate level (Table II), statistics between group differences in anthropometric measures, somatotype components and maximum oxygen consumption between players who play in different positions on the team are determined in the variables: height ($F = 3.60$; $p = .014$), weight ($F = 4.09$; $p = .007$), calf thickness ($F = 3.00$; $p = .031$), humeral width ($F = 3.24$; $p = .023$) and VO_{2max} (ml / min / kg) ($F = 3.79$; $p = .011$).

The differences between positions are obtained by post-hoc analysis of variance (Table III). The results of the analysis show that there are differences in morphological profile among the players who play in different positions on the team. Goalkeepers have statistically significant higher body height and humeral breadth, and lower values of the maximum oxygen consumption in comparison to players who play in other

positions on the team and more weight regarding the players who play in the middle and forward. Defensive players have statistically significant higher body weight in comparison to the middle players. Statistically significant differences among the players who play in different positions on the team are not determined in other anthropometric measures and somatotype components.

DISCUSSION

There are a number of studies that research the anthropometric characteristics and somatotype components among top soccer players, or comparative research between elite and non-elite players.

The advantage of this study is that anthropometric and functional measurements are conducted on a relatively large sample of young elite players from the Republic of Kosovo which are selected from the best clubs. The results of this research can serve as normative values for comparison of anthropometric, somatotype and functional data of young soccer players in R. Kosovo and abroad.

So far studies suggest that anthropometric characteristics and body composition can influence the selection of athletes in many sports (Hasan *et al.*, 2007). It is important that the athlete have adequate morphological and functional profile in order to be successful in a particular sports discipline (Ziv & Lidor, 2009).

The average body height of Kosovian soccer players (U19) is 177.90 cm, while body weight is 68.94 kg. Different studies show that soccer players in national and international competitions vary in body weight, height and BMI index, depending on geographical location, ethnic and cultural influences or different style of football, dietary habits and the like. Professional and/or the top soccer players in Europe,

the Middle East and South America have average body height ranging from 176.0 - 183.0 cm., and a body weight that is generally lower than 80 kg (and is in the range between 65.6 - 78.7 kg), and BMI index that ranges between 23.00-24.45 kg/m². Mean values of body height, weight and BMI index of Kosovian soccer players are higher regarding the players from Asian teams, and these values are similar to the values of players from European and South American teams (Reeves *et al.*, 1999; Bandyopadhyay, 2007; Pluncevic-Gligoroska *et al.*, 2014). By comparing the morphological characteristics between Kosovian soccer players and players from neighboring countries (Macedonia, Croatia and Serbia), it could be concluded that Kosovian soccer players have nearly identical body height, and slightly lower body weight and BMI regarding the players that play in Macedonia, Croatia and Serbia - 77.7 kg, 77.6 kg and 77.4 kg (Ostojic, 2000; Matkovic *et al.*, 2003; Pluncevic-Gligoroska *et al.*).

Body composition is also an important factor for the success in this sport. The average amount of fat tissue among young healthy boys, who are not engaged in organized sport activity, range from 18-20 % of total body weight, while the percentage of fat component in athletes is generally lower (Matkovic *et al.*). The lowest percentage of fat tissue from 4 to 7 % was established in sportsmen-athletes who run long distances 8. Considering the specifics of the football game, it could be expected that soccer players have relatively low

percentage of fat tissue. However, the results vary significantly and are subject to inter/intra-individual fluctuations, depending on the position, the standards of game and season (Thomas & Reilly, 1979). The average values of the fat component in Kosovian footballers is around 11.6 %, which is within the value of the players from the first Brazilian league (10.9 %), Portuguese players (10.5 %) and English players (12.4 %) according to Matkovic *et al.* The percentage of fat component in Kosovian goalkeepers is somewhat higher, but not statistically significant in terms of the players that play on other positions in the team. A small percentage of fat component (10.0 %) was noted in Portuguese goalkeepers, however, we should have in mind the fact that the measurements were conducted during the season (Matkovic *et al.*). Higher values of the fat component in goalkeepers can be explained in the lower intensity of play to which the goalkeepers were exposed on the other. However, taking into account the specific movements of the goalkeeper: jumps, throws, falls, etc., it can be assumed that the lower percentage of fat tissue will contribute for more effective play. The lowest values of fat tissue that are not statistically significant are noted among forward players - players of the attack.

Generally, mesomorphic component dominates among soccer players and their somatotype category is balanced mesomorphic (Casajús & Aragonés, 1991; Rienzi *et al.*; Bandyopadhyay). It is logical that muscle building is useful to carry out the various activities during the match because these activities define the outcome of the match, for example, start on the opponent, acceleration, kicking and building the ball. In this research Kosovian footballers show ecto-mesomorphic somatotype (2.4-3.4-3.3) and thus partially deviate in somatotype characteristics of elite players from other countries. The somatotype of Portuguese players from the first league is 2.8-5.6-2.2 (Casajús & Aragonés), the Spanish National Team (1990 World Cup) 2.2-5.1-1.9 (Casajús & Aragonés), top level Hungarian 2.1-5.1-2.3, and elite level South American players 2.2-5.4-2.2 (Rienzi *et al.*) were higher than the mesomorphy score obtained in this study. The reason for this deviation is probably conditioned by the specifics of the sample of respondents that include only young players aged 19 to 21 years. In addition to this fact is the research who analyzed the soccer players from the junior national teams from 10 different countries and found, just like Orhan *et al.* (2013), that somatotype values of the players were balanced mesomorphic and ectomesomorphic, on average.

By comparing the body weight of players that play in different positions on the team, it could be noted that goalkeepers are the tallest, while the attackers and middle

players are on average lower by 4 centimeters. Also, it was determined that the height may affect the position of that soccer player in the team, so that taller players are mostly found to the keeper and in defense, where height is an advantage (Bangsbo; Reilly *et al.*, 2000; Matkovic *et al.*). Similar results were obtained in a study of Matkovic *et al.* who found that Croatian goalkeepers are the tallest and heaviest, and have long arms and legs. In our research goalkeepers and defense players are also taller than the players who play in the middle and forward.

The maximum oxygen consumption of Kosovian soccer players is around 53 ml/min/kg. When you compare the maximum oxygen consumption in Kosovian young players with the results of international studies, we find that Kosovar athletes are at the bottom of the scale for this parameter. Namely, the Norwegian soccer players from the First league have a maximum oxygen consumption at about 62 ml/min/kg, New Zealander of 61 ml/min/kg, Australian about 60 ml/min/kg, Croatian 60 ml/min/kg, English 60 ml/min/kg, the soccer players from Hong Kong 59 ml/min/kg, soccer players from US 58 ml/min/kg, and top Brazilian players 52 ml/min/kg (Sporis *et al.*, 2017). On one hand, the conclusion is that Kosovian players have inferior aerobic abilities in comparison with the aforementioned data. It is certainly one of the reasons leading to lack of success of Kosovian soccer players in international matches where the opponent has prepared teams that play dynamic football and also represents a task for the professional teams to advance this important parameter using appropriate modern practice technologies. However, the example of soccer players from Brazilian First League shows that although this parameter is particularly important for the football game, it is not crucial for the success in top football. The team that has weaker aerobic abilities can modify game style but it takes the other potentials (anaerobic parameters, strategy, tactics, and technique) to be at the top level. Reilly *et al.* propose a specific threshold of VO_{2max} (60 ml/min/kg), whereas in the case of values below this threshold will be considered that the player has no much chance of having the physiological attributes for success in top football. Also, VO_{2max} varies depending on the role and position of the player on the team. Gil *et al.* noted that VO_{2max} in 19 professional players in the Portuguese First League was below 60 ml/min/kg for goalkeepers and defense players, and above 60 ml/min/kg for the midfielders and attackers. These findings are similar to those for senior professional players in England, where players from midfield had significantly higher values of VO_{2max} than those of other positions (Reilly *et al.*). In a number of studies, differences in relative maximum oxygen consumption were not determined, regarding the position of the game. The authors suggest that the noted similarities between the players who

play on different positions regarding the VO_{2max} may be due to the requirements imposed by the modern football, more movements of the attacking and defensive players. In this research there are no statistically significant differences in VO_{2max} between players who play defense, middle, and attack.

On the basis of the achieved results of this research, it can be concluded that there are no differences in anthropometric characteristics, somatotype components, and maximal oxygen consumption among other players who play in different positions on the team, except for the goalkeeper. The trend in modern football is increasingly focused on improving the performance of all players who play on all positions that will allow more movements both of attacking and defensive players. The undertaken roles among juniors and elite soccer players according to their positions are related to their physical performance. Somatotype is a method that estimates the physical profile in athletes. However, anthropometric and physiological factors are evaluated, together with genetic factors, and the effect of training. No single method is adequate to determine physical profile (Orhan *et al.*).

Talent selection and guidance is important in sports requiring high performance. Therefore, in talent selection, objective criteria should be used; and collective guidance should be used, based on anthropometric and physiologic tests. Appropriate guidance, based on individual differences and development, should be given priority (Orhan *et al.*).

Evaluation of somatotype components in this study indicate that there are no specifics in somatic typology of players who play in different positions on the team. Bearing in mind that football is one of the most popular sports in the world, during the selection of talented players, tests for assessing physiological and motor performance, together with anthropometric and somatotype research should be used and the players' development should be monitored.

CONCLUSIONS

In order to determine morphological and functional characteristics of young footballers from the Republic Kosovo and to analyze whether there are differences regarding the positions on which they play, there are 11 anthropometric measures which are applied for assessing longitude dimensionality, transversal dimensionality, voluminosity and fat tissue (skin folds), and indirectly the body composition, somatotype components and relative maximum oxygen consumption are measured.

Goalkeepers have statistically significantly higher body height and humeral breadth, and lower values of maximum oxygen consumption in comparison to players who play on other positions in the team and more weight regarding the players who play in the middle and forward. Defense players have statistically significantly higher body weight than the middle players. In the other anthropometric measures and somatotype components there are no statistically significant differences among the players who play on different positions in the team.

Our results suggest that the selection of players in football for individual playing positions must be based on morphological and functional characteristics of the players. Coaches should have a good knowledge of general and specific tasks that the player should perform in the game. It is strongly recommended in top football for certain positions to choose players that are as much as possible compatible with the requirements of that playing positions according to their morphological and functional features.

The achieved results can serve as normative anthropometric indicators for regular sports medical examinations of young players in our country. The data can also be used as a template to compare anthropometric and somatotype data of young players from different countries.

RESUMEN: En el estudio se midieron la altura, peso, diámetros, volumen y pliegues cutáneos en una muestra de 242 jóvenes futbolistas de la República de Kosovo y se midieron indirectamente la composición corporal, los componentes del somatotipo, el índice de IMC y el consumo máximo de oxígeno para determinar sus características morfológicas y funcionales y para analizar la especificidad, es decir, las diferencias probables basadas en las posiciones de juego (porteros, defensa, jugadores medios y atacantes). Dentro del análisis estadístico, se calcularon los parámetros estadísticos descriptivos básicos, y se aplicaron análisis de varianza multivariante y univariado y el análisis post hoc. Los porteros estadísticamente tienen una altura mayor del cuerpo y de amplitud humeral, y valores más bajos de consumo máximo de oxígeno en comparación con los jugadores que juegan en las otras posiciones en el equipo y tienen un mayor peso corporal con respecto a los jugadores que juegan en el medio y los atacantes. Los jugadores de defensa tienen un peso corporal estadísticamente mayor que los jugadores del medio campo. En las otras medidas antropométricas y componentes del somatotipo, no existen diferencias estadísticamente significativas entre los jugadores que juegan en diferentes posiciones en el equipo. Los resultados logrados podrían servir como indicadores normativos morfológicos y fun-

cionales para los exámenes médicos deportivos de los jugadores de fútbol en la República de Kosovo. También podrían usarse como una plantilla para comparar los datos morfológicos y funcionales de jugadores jóvenes de fútbol de niveles similares en diferentes países.

PISMENA SAGLASNOST

Ja, d-r Georgi Georgiev, red. prof. mentor kandidata mr Malsora Gjonbalaja, saglasan sam da doktorski rad na temu „Somatotipske karakteristike, bazično motoričke, specifično motoričke i funkcionalne sposobnosti mlađih fudbalera prema njihovoj poziciji u igri“, krene u dalju proceduru, odnosno da se imenuje Komisija za pregled i ocjenu doktorske disertacije, budući da sadrži sve elemente propisane za dalju proceduru.

Takođe, naglasio bih da kandidat u radu koji je objavio u časopisu indeksiranom u SCIE indeksnoj bazi, koristio je rezultate iz doktorske disertacije na adekvatan način, odnosno u navedenom radu su prezentovane rezultate doktorske disertacije kako nalažu pravila doktorskih studija.

BIOGRAFIJA

Malsor (Hasan) Gjonbalaj rođen je 02. 08.1978. godine u Peći, Kosovo.

Osnovnu školu završio je 1994. godine u Peći, gdje je završio i srednjoškolsko obrazovanje u Gimnaziji "Bedri Pejani" 1998. godine.

Diplomirao je 2004. godine na Fakultetu za fizičku kulturu i sport u Prištini.

Magistarski rad pod naslovom "Struktura treninga za aktuelne potrebe fudbala" odbranio je 2007. godine u Prištini.

Doktorske studije upisao je 2012/2013. na Fakultetu za sport i fizičko vaspitanje Univerziteta Crne Gore.

Bio je dugogodišnji profesionalni fudbaler i igrao je na Kosovu, u Albaniji, Belgiji i Makedoniji.

Tokom fudbalske karijere osvojio je brojne trofeje i nagrade, kao što su titula šampionata, kup države, proglašen bio za najboljeg fudbalera.

Bio je reprezentativac Kosova u svim ekipama počevši od selekcije U15, do seniorske, "A" reprezentacije Kosova.

Poslije fudbalske karijere, bio je trener seniorske reprezentacije Kosova od 2009. do 2013.

U sezoni 2012/2013. bio je glavni trener FK "Vllaznimi" iz Đakovice.

Od 2015. do kraja sezone 2018. bio je sportski direktor makedonskog prvaka FK "Shkendija" iz Tetova.

Od 2012. do 2015. bio je savjetnik ministra za sport u Ministarstvu kulture, omladine i sporta na Kosovu.

Od 2007. do danas asistent je na predmetu Fudbal na Fakultetu za fizičku kulturu i sport Univerziteta u Prištini.

Rukovodilac je sektora za edukaciju trenera Fudbalskog saveza Kosova.

Govori albanski, crnogorski, engleski i francuski jezik.

BIOGRAFIJA

IME I PREZIME: Stevo Popović

Zovem se Stevo (Radivoja) Popović i državljanin sam Republike Crne Gore sa stalnim prebivalištem u Podgorici. Roden sam 16. septembra 1979. godine u gradu Bačka Topola u Republici Srbiji.

Godine 1994. sam završio Osnovnu školu „Nikola Đurković“ u Feketiću, gdje sam zaslužio najprestižniju diplomu za postignuti uspjeh tokom školovanja, Vukovu diplomu i pet posebnih diploma iz sljedećih predmeta: matematika, srpsko-hrvatski jezik i književnost, geografija, njemački jezik i fizika.

Godine 1998. sam završio Gimnaziju „Dositej Obradović“ u Bačkoj Topoli sa odličnim uspjehom, gdje sam tokom završne godine, kao predsjednik svog odjeljenja bio izabran za potpredsjednika zajednice učenika svoje škole.

Dana, 6. novembra 2003. godine sam diplomirao na Fakultetu fizičke kulture Univerziteta u Novom Sadu sa temom „Mogućnosti realizacije sportsko – rekreativnih programa u Nacionalnom parku Fruška gora“ pod mentorstvom prof. dr Milene Mikalački, šefa na katedri za sportsku rekreaciju. Time sam stekao zvanje profesora fizičkog vaspitanja i diplomiranog trenera fudbala. Tokom završne godine studija sam se isticao u vannastavnim aktivnostima tj. kao sekretar Studentske unije Fakulteta fizičke kulture i član izvršnog odbora pomenute studentske organizacije.

Dana, 3. novembra 2009. godine sam magistrirao na Univerzitetu u Novom Sadu (ACIMSI) na smjeru Menadžment u sportu pod mentorstvom prof. dr Stevana Vasiljeva, redovnog profesora u oblasti Marketinga u sportu. Javnom odbranom magistarske teze sa temom „Uloga marketinga u savremenim tokovima na primjeru sportskih organizacija“ sam stekao zvanje magistra nauka iz interdisciplinarnе oblasti menadžmenta u sportu.

Dana, 2. juna 2011. godine sam doktorirao na Univerzitetu u Novom Sadu (ACIMSI) na smjeru Menadžment u sportu pod mentorstvom prof. dr Dragana Kokovića, redovnog profesora u oblasti sociologije sporta. Javnom odbranom doktorske disertacije sa temom „Reklamiranje u sportu kao efektivno sredstvo savremene poslovne komunikacije“ sam stekao zvanje doktora nauka iz interdisciplinarnе oblasti menadžmenta u sportu, koje je odlukom Ministarstva prosvjete i sporta br. 05-1-452 od 1.10.2011. godine izjednačeno sa zvanjem doktor nauka fizičke kulture.

Tokom školske 2011/2012 sam pohadao post-doktorske studije na Fakultetu za sport Univerziteta u Ljubljani pod mentorstvom prof. dr Jakoba Bednarika, vanrednog profesora na katedri za menadžment u sportu. Ovaj dvosemestralni studijski boravak koji sam uspješno priveo kraju 15. jula 2012. godine, omogućila mi je stipendija koju sam dobio putem međunarodnog projekta BASILEUS III.

PODACI O RADNIM MJESTIMA I IZBORIMA U ZVANJE

Honorarno sam angažovan na Univerzitetu Crne Gore od 7. februara 2011. godine, dok sam u radnom odnosu kao saradnik u nastavi na Fakultetu za sport i fizičko vaspitanje u Nikšiću od 1. aprila 2011. godine do izbora u zvanje docenta (19. decembra 2013. godine). Izabran sam u zvanje na sljedećim predmetima: Društveni odnosi u sportu (specijalističke akademske studije - fizička kultura), Liderstvo u sportu (osnovne

akademske studije - fizička kultura) koji se izvode na Fakultetu za sport i fizičko vaspitanje, kao i na predmetim: Socijalna psihologija turizma (osnovne akademske studije - turizam i osnovne primijenjene studije - hotelijerstvo) na Fakultetu za turizam i hotelijerstvo u Kotoru. Od decembra 2014. godine obavljao sam funkciju prodekana za nauku, do izbora za v.d. Dekana, na koju funkciju sam postavljen u maju 2015. godine, dok sam za Dekana Fakulteta za sport i fizičko vaspitanje Univerziteta Crne Gore izabran u junu 2015. godine, a na toj poziciji se i trenutno nalazim.

Takođe sam sticao iskustvo u ljetnjem kampu za djecu, Camp Ramapo Anchorage u Sjedinjenim Američkim Državama, u državi New York, u gradu Rhinebeck. Predstavljao sam Američki institut za inostrane studije (AIFS) i fondaciju Camp America iz Londona i njihove programe kulturne razmjene, zatim sam radio kao animator u kompaniji „Montenegro Stars Hotel Group“, u hotelu Montenegro u Bečićima. Pripravnički staž sam odradio u Osnovnoj školi „Stefan Mitrov Ljubiša“ u Budvi. Zatim sam položio stručni ispit sa temom „Mogućnosti ostvarivanja sportsko-rekreativnih aktivnosti u Nacionalnom parku Skadarsko jezero“. Radio sam kao sportski novinar tj. dopisnik iz Budve za beogradski Dnevni sportski list „Sport“. Obavljao sam funkciju lokalnog predstavnika u Crnoj Gori i intervjuera za fondaciju CCUSA iz San Franciska, a bio sam zadužen za promociju njihovih programa kulturne razmjene i selekciju polaznika. Bio sam potpredsjednik Sportske asocijacije Budve, kao i potpredsjednik Smučarskog kluba „Mogren“ iz Budve i izvršni direktor „Crnogorskog društva za spotski menadžment“ iz Budve. Bio sam honorarno angažovan i kao skaut u švajcarskoj firmi „Sport Data“ koja se bavi prikupljanjem statističkih podataka u oblasti sporta.

Vrijedno je istaći da sam biran u zvanje saradnika u nastavi na Fakultetu sporta i fizičkog vaspitanja Univerziteta u Novom Sadu za realizaciju istraživačkih projekata Fakulteta i vježbi po studijskim programima za osnovne i primijenjene studije, gdje sam radio dvije školske godine. Takođe i da sam dobitnik stipendije u međunarodnom projektu JoinEU SEE I od strane Erasmus Mundus External Cooperation Window i Evropske komisije a proveo sam mjesec dana na akademskoj razmjeni osoblja tokom ljetnjeg semestra 2009/2010 školske godine na Middle East Technical University u Ankari. Nakon povratka sa studijskog boravka, postao sam aktivan član oficijelne mreže „Buddy Network“ koju je pokrenula Kancelarija za međunarodnu saradnju Univerziteta u Novom Sadu sa ciljem da što kvalitetnije dočeka i ugosti inostrane studente i nastavno osoblje koji borave na Univerzitetu putem brojnih programa mobilnosti. Takođe je vrijedno napomenuti da sam, pored BASILEUS III, dobio stipendiju putem međunarodnog projekta BASILEUS IV, te da sam proveo mjesec dana na akademskoj razmjeni osoblja tokom 2013/2014 školske godine na ATEI u Solunu. Nakon toga, u okviru TEMPUS projekta „QinR“ sam izabran da kao mladi istraživač provedem na studijskom boravku na Univerzitetu u Munsteru u Njemačkoj, te boravio na Univerzitetu u Ljubljani u tri navrata po 7 dana u okviru bilateralnog projekta tokom školske 2016/2017 i 2017/2018 godine, kao i 21 dana na Univerzitetu u Nici tokom školske 2016/2017 godine.

Aktivno se bavim istraživačkim radom, a objavio sam u saradnji sa svojim kolegama više od 20 radova u međunarodnim časopisima koji se nalaze u bazama podataka (Web of Science), kao i niz radova u međunarodnim časopisima koji se nalaze u ostalim međunarodnim bazama podataka i imaju redovnu međunarodnu distribuciju i rezime na stranom jeziku. Takođe, redovno posjećujem nacionalne i međunarodne

naučne konferencije na kojima prezentujem najnovije pronalaskе iz oblasti svog interesovanja, prije svega iz društvenih odnosa u sportu, zatim menadžmenta u sportu i antropologije tjelesnog vježbanja i sporta. Vrijedno je dodati da sam anagažovan i u naučnim odborima u naučnim časopisima i na naučnim konferencijama, gdje uredno recenziram prispjele rukopise, dok sam već četiri godine šef naučnog odbora u okviru godišnje međunarodne naučne konferencije koju organizuje Crnogorska sportska akademija i Fakultet za sport i fizičko vaspitanje Univerziteta Crne Gore i jedan od glavnih urednika časopisa „Montenegrin Journal of Sports Science and Medicine“ koji je indeksiran u „Web of Science - ESCI“ i „Scopus“ bazama podataka. Takođe, aktivno se bavim projektnim menadžmentom i rukovodim pripremama za nacionalne i međunarodne prijave, kako na konkurse otvorene za naučno-istraživačke projekte, tako i za projekte u oblasti unaprjeđenja obrazovanja u oblasti sportskih nauka. Bio sam nacionalni koordinator na dva bilateralna projekta, sa Slovenijom i Makedonijom, odobrena od strane Ministarstva nauke. Koordinator sam CEEPUS mreže u okviru koje participira jedanaest institucija iz različitih zemalja iz centralne Evrope.

Član sam Centra mladih naučnika u okviru Crnogorske akademije nauka i umjetnosti kao i glavni i odgovorni urednik Uredivačkog odbora Univerziteta Crne Gore, a bio sam i član Centara za studije i kontrolu kvaliteta Univerziteta Crne Gore i Odbora za monitoring magistrskih studije Univerziteta Crne Gore.

Što se participiranja u profesionalnih udruženja u oblasti sporta tiče, nacionalni sam delegat Crne Gore u FIEP Europe, zatim član borda direktora u FIEP World, kao i član akademskog borda u Azijskoj asocijaciji za sportske nauke i vježbanje, institucionalni predstavnik i član izvršnog odbora HEPA Europe, član Evropskog koledža za sportske nauke, ISAF, SPOLINT i dr.

Tokom svog školovanja i vremena provedenog u inostranstvu naučio sam tečno govoriti engleski jezik a, pored toga služim se i njemačkim jezikom koji sam učio tokom svog osnovnog i srednjeg školovanja. Tokom jednogodišnjeg boravka u Sloveniji naučio sam se koristiti i slovenačkim jezikom. Odlično rukujem računarom, a pored operativnog programa Windows, služim se i sljedećim programima: MS Office - Word, Excel, FrontPage, PowerPoint, zatim SPSS, Corel Draw, Internet Explorer, Outlook Express i E-banking.

REKTOR

Prof. Radmila Vojvodić

BIOGRAFIJA

U zvanje redovnog profesora Univerziteta Crne Gore za predmete: Osnovi antropomotorike, Metodika antropomotorike, Atletika I i Atletika II na Fakultetu za sport i fizičko vaspitanje u Nikšiću izabran sam odlukom Senata Univerziteta Crne Gore, broj: 08-1419, u Podgorici 28. 05. 2015. godine.

Rođen sam 12. avgusta 1970. godine u Nikšiću. Osnovnu školu sam završio u rodnom gradu 1984. godine. U toku osnovne škole dva puta sam biran za učenika godine i nosilac sam diplome "Luča".

Srednju Mašinsko tehničku školu sam završio u Sarajevu 1988. godine, a u istom gradu sam u periodu od 1989. do 1992. godine odslušao prve tri godine Fakulteta za fizičku kulturu. Bio sam najuspješniji student prve godine.

Na Filozofskom fakultetu u Nikšiću 3. novembra 1992. godine stičem diplomu nastavnika fizičkog vaspitanja, a 5. maja 1995. godine diplomu nastavnika razredne nastave. U Prištini na Fakultetu za fizičku kulturu 24. juna 1998. godine diplomiram sa ocjenom 10 i postajem profesor fizičke kulture.

Poslijediplomske studije upisujem na Fakultetu fizičke kulture u Novom Sadu školske 1999/2000. godine i završavam ih kao prvi u generaciji 15. jula 2002. godine odbranivši magistarsku tezu «Relacije motoričkih sposobnosti i morfoloških karakteristika sa sprinterskom brzinom kod učenica srednje škole». Na istom fakultetu sam 29. 10. 2004. godine odbranio doktorsku disertaciju «Struktura i relacije motoričkih sposobnosti i morfoloških karakteristika sa brzinom i eksplozivnom snagom školske omladine».

U dva navrata sam, februar 2006. i februar 2008. godine, studijski boravio na Kineziološkom fakultetu u Zagrebu sa ciljem specijalističkog usavršavanja iz oblasti kondicionog treninga.

Specijalističko usavršavanje sam nastavio i u narednom periodu kroz studijske boravke u:

- Dublinu (Republika Irska) septembar mjesec 2010. godine,
- Madridu (Španija) novembar mjesec 2011. godine,
- Istanbulu (Turska) avgust mjesec 2013. godine i u
- Amsterdamu (Holandija), novembar mjesec 2013. godine.

Stalni radni odnos sam zasnovao 23. oktobra 1995. godine u Osnovnoj školi „Savo Pejanović“ u Podgorici.

Kao saradnik stipendista Univerziteta Crne Gore od 6. marta 2001. godine počinjem da radim na Filozofskom fakultetu u Nikšiću i to na Odsjeku za fizičku kulturu. U zvanje asistenta sam biran 23. septembra 2003. godine. U početku sam izvodio vježbe samo na predmetu Osnovi antropomotorike, dok sam u školskoj 2002/2003. godini osim iz predmeta Osnovi antropomotorike izvodio vježbe i iz predmeta Plivanje i Logorovanje, a u 2003/2004. i iz predmeta Skijanje. Od početka školske 2004/2005. godine na osnovu Odluke Univerziteta Crne Gore i Studijskog programa za fizičku kulturu Filozofskog fakulteta, pored vježbi započinjem izvoditi i predavanja za predmet Osnovi antropomotorike, a u ljetnjem semestru i za predmet Metodika antropomotorike.

Odlukom Senata Univerziteta Crne Gore, broj 01-1167, u Podgorici 26. 05. 2005. godine, izabran sam u akademsko zvanje docent Univerziteta Crne Gore za predmete: Osnovi antropomotorike i Metodika antropomotorike na Studijskom programu fizička kultura na Filozofskom fakultetu u Nikšiću.

Odlukom Senata Univerziteta Crne Gore, broj: 08-710, u Podgorici 29. 04. 2010. godine, izabran sam u akademsko zvanje vanredni profesor Univerziteta Crne Gore za predmete: Osnovi antropomotorike, Metodika antropomotorike, Atletika I i Atletika II na Fakultetu za sport i fizičko vaspitanje u Nikšiću.

Oženjen sam i otac sam dvoje djece.
