

NO-DEPENDENCE Days: HYDROGEN IN MONTENEGRO – FROM POTENTIAL TO PRACTICE

About Our Project

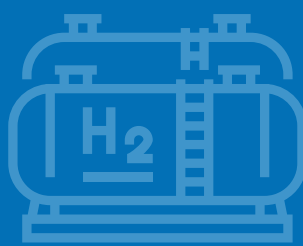

The NO-DEPENDENCE project is focused on the development of a technically innovative multi-stage hydrogen compression system for application in autonomous refueling stations, with the aim of improving their safety, economic viability, and accessibility. We recognized the need to facilitate an open dialogue on potential directions for the development of hydrogen energy in Montenegro by organizing interactive workshops and a panel discussion, bringing together representatives of the academic community, public administration, the energy sector, regulators, the financial sector, and civil society.

Panel Discussion

Workshops

Hands-on session
