NASLOV PREDLOŽENE TEME	
Na službenom jeziku	Memristori – od nanočestice do uređaja
Na engleskom jeziku	Memristive nanoscale phenomena – from single nanoparticle to scalable devices
Obrazloženje teme	
Oblast neuromorfnog inženjeringu ima potencijal za realizaciju efikasnijih, biološki motivisanih računskih uređaja. Evoluirala je kasnih 80-tih godina kroz realizaciju neuronom inspirisanih uređaja kao npr. adaptirajuća integrisana elektronska mrežnjača. Memristivni uređaji su glavne komponente neuromorfnih kola jer transport nanelektrisanja u njima ima karakter sličan transportu jona u biološkim sinapsama. Ovi uređaji se mogu integrisati u cross-bar arrays. Važan aspekt je sparivanje detekcije i obrade signala, koji je ostao neistražen kod ovih uređaja jer su fizički mehanizmi na nanoskali i dalje nepoznati. Još jedan problem je statistička varijacija u prebacivačkim svojstvima memristivnih uređaja, što ih ne čini komercijalnim. Korišćenjem <i>gating</i> efekta može se manipulisati pregrštom memristivnih stanja kako bi se razotkrile njihove sposobnosti i primjena u neuromofnom inženjeringu.	
Pregled istraživanja	
U rad su uključeni master studenti Stefan Šćepanović i Rajko Dragojević, koji su boravili na Institutu Jožef Štefan od maja do kraja jula 2022. god.	

Istražavanja se vrše pomoću mikroskopa atomske sile (AFM) i skenirajućeg tunelskog mikroskopa (STM). U navedenom periodu, rad u laboratoriji je bio posvećen upoznavanju i ovladavanju kompleksnih mikroskopa, u cilju samostalnog upravljanja. Mjerenja su započeta i dobijeni prvi eksperimentalni rezultati, posle čijeg kompletiranja se može dobiti osnova za naučnu publikaciju.

Pored učenja rukovanja STM i AFM, ovladano je kriogenim tehnikama za STM, koristeći tečni azot i helijum, i postižući temperaturu od 4.2 K. Takođe je ovladano tehnikama čišćenja uzorka – *sputtering* i *annealing*, zatim tehnikama ultra-visokog vakuma, kao i upravljanjem mikroskopima uz pomoć softvera, i uz određeni manuelni dio upravljanja. Stefan Šćepanović je analizirao podatke mjerenja pomoću programa MATlab.

Prva mjerenja su protekla uspješno, dok glavna mjerenja tek slijede na novim uzorcima i tipovima (silicijima) naručenim od kompanije Rocky Mountain Nanotechnology iz SAD-a, i od kompanije Phasis iz Švajcarske. Pomoću STM-a, fabrikovane su nanotrake grafena na supstratu od zlata (111), i time je nadograđen uzorak. Nanotrake smo vizuelizovali pomoću STM-a.

Da bi se izbjegla formacija frustriranih filamenata i sitnih otvora, memristivni uređaji se pažljivo pripremaju korišćenjem ustanova za mikrofabrikaciju u Kili, u Njemačkoj.

Cilj i hipoteze

Cilj ovog istraživanja je da se kroz proučavanje fizičkih svojstava novoosmišljenih konfiguracija memristora, dode do one konfiguracije sa najoptimalnijim djeljstvom koja oponaša funkciju sinapse u ljudskom mozgu. Takav memristor bi se dalje inkorporirao u memristorske mreže kao neuromorfne mreže, koje kao jedan od novih principa računanja doprinose razvoju kognitivne obrade podataka, analize velikih podataka i sistema vještačke inteligencije male snage baziranih na mašinskom učenju i Internetu stvari.

Materijali, metode i plan istraživanja

Istraživanja se vrše pomoću skenirajućeg tunelskog mikroskopa i mikroskopa atomske sile. Električna karakterizacija uzorka uključuje strujno-naponsku spektroskopiju i imaging (vizuelizaciju) struje, i vrši se pomoću AFM-a.

Pri mjerenu AFM-om, postoje dva moda: *tapping* i kontaktni mod. Sonda AFM-a na vrhu sadrži tip (siljak), koji je od platine, prečnika manjeg od 10 nm.

Uzorci koji se ispituju su memristori koji se sastoje od dvije elektrode i izolatorskog sloja između njih. U izolator ili takozvanu memristivnu matricu (silicijum dioksid ili titanijum dioksid) su uronjene nanočestice legura srebro-platina i srebro-zlato. U tu matricu se inkorporiraju i nanotrake grafena koje se fabrikuju na supstratu od zlata. Taj dodatak uzorku ne služi samo da se pojača memristivno dejstvo i ograniči statistička varijansa električnog prebacivanja između ON i OFF stanja, već i da se ostvari jako sparivanje sa plazmoničnim efektima u uređajima memristivnih (neuromorfnih) mreža.

U nastavku istraživanja koristićemo memristivni tip na nanotrakama grafena fabrikovanim na supstratu zlata (111). Zatim će se postaviti ista memristivna matrica između električnih kontakata. U obje konfiguracije uzorak će se osvijetliti laserom i biće proučavan optički odziv, pod pretpostavkom da laserska svjetlost modulira memristivno dejstvo uređaja.

Očekivani naučni doprinos

Proučavanjem memristivnog dejstva nano-uređaja pomoću mikroskopa atomske sile i njegovom modulacijom pomoću svjetlosti lasera težiće se da se dobije što slabliji uredaj – najbolja verzija vještačke sinapse - koji bi dalje bio inkorporiran u energetski efikasne, brže i pametnije neuromorfne mreže.

ODLUKU O IZBORU U ZVANJE

Dr PREDRAG MIRANOVIĆ bira se u akademsko zvanje redovni profesor Univerziteta Crne Gore za predmet Kvantna fizika na Prirodno-matematičkom fakultetu u Podgorici.

REKTOR,

Prof. dr Ljubiša Stanković

Predrag Miranović -biografija-

Rođen sam 12 decembra 1966. godine u Podgorici, Crna Gora, gdje sam završio osnovnu školu i gimnaziju. Nakon odsluženja vojnog roka u JNA upisao sam 1986. godine studije fizike na Prirodno-matematičkom fakultetu Univerziteta Crne Gore. Studije sam završio u redovnom roku oktobra 1990. godine sa prosječnom ocjenom 9,63. Proglašen sam za najboljeg diplomiranog studenta Univerziteta Crne Gore za školsku 1989/90 i dobio Plaketu Univerziteta Crne Gore.

Odmah nakon završetka studija sam angažovan kao asistent-pripravnik na Univerzitetu Crne Gore. Upisao sam postdiplomske magistarske studije na Fizičkom fakultetu u Beogradu, i paralelno izvodio vježbe na Odsjeku za fiziku u Podgorici. Magistarski rad pod nazivom "NMR linije u visokotemperaturnim superprovodnicima" sam odbranio u oktobru 1993. godine. Kako bih se potpuno posvetio izradi doktorske disertacije u periodu 1993-1995 godine sam bio radno angažovan na Institutu za Fiziku u Žemunu. Doktorsku disertaciju "Magneto-elastični efekti u anizotropnim superprovodnicima" pod mentorstvom Ljiljane Dobrosavljević-Grujić sam odbranio u martu 1996. godine na Fizičkom fakultetu u Beogradu. Rezultati iz doktorske disertacije su objavljeni u dva rada u časopisu Američkog fizičkog društva, Physical Review B. Na osnovu toga sam nagrađen od strane Crnogorske akademije nauka i umjetnosti nagradom iz fonda Petra Vukčevića za uspjeh u istraživačkom radu u periodu 1993-1995. Nakon odbrane doktorske disertacije, u junu 1996. godine sam izabran u zvanje docent za predmet *Kvantna Mehanička fizika* na Univerzitetu Crne Gore.

Tokom ljeta 1996. godine sam započeo saradnju sa Vladimirom G. Koganom na problemu raspodjele magnetnog polja unutar borokarbidičnih superprovodnika, a rad sam dovršio za vrijeme studijskih boravaka u Ames National Laboratory, Iowa, USA, tokom decembra 1996. i aprila 1997. godine. Dva rada, koja su proizila tokom boravaka u Ajovi, su naišli na veoma dobar prijem kod međunarodne naučne javnosti i citirani su preko 100 puta. Na poziv profesora Kenza Mije u periodu jun 1997 – jun 1998 godine sam boravio na Univerzitetu u Tokiju, u zvanju *lecturer*. Nakon povratka iz Japana, boravio sam dva mjeseca na Oak Ridge National Laboratory, Tennessee, USA kod profesora D. K. Christena. Tamo sam dovršio rad na temu „Flux lattice symmetry in V₃Si: Nonlocal effects in a high-kappa superconductor“ koji je po ocjeni Editora zavrijedio da se predstavi u Physical Review Focus (izdanje od 24. juna 1999. godine). Nakon povratka iz USA radio sam na Institutu za Fiziku u Žemunu u zvanju naučni saradnik. Na Univerzitet Crne Gore sam se vratio u ljeto 1999. godine. U zvanje vanredni profesor za predmet *Kvantna fizika* sam izabran 2001. godine. Na konkursu Japanskog društva za promociju nauke sam dobio postdoktorsku stipendiju koja mi je omogućila boravak na Univerzitetu u Okajami kod profesora Kazušige Mačide u periodu 2001-2003. Za vrijeme specijalizacije sam uspio da razvijem posebnu metodu za numeričko rješavanje mikroskopskih jednačina superprovodnosti koja je omogućila mnogo lakšu analizu velikog broja problema koji se tiču termodinamičkih i transportnih osobina superprovodnika.

Plodnu saradnju sa Univerzitetom u Okajami sam nastavio i nakon povratka na Univerzitet Crne Gore.

Nakon povratka iz Japana sam se, pored nauke i nastave, posvetio i drugim aktivnostima. U periodu 2004-2006 godine sam bio predsjednik Društva fizičara Srbije i Crne Gore. U oktobru 2006. godine sam izabran u zvanje redovni profesor. Vijeće Prirodno-matematičkog fakulteta me je izabrao za člana Nastavno-naučnog vijeća, odnosno Senata Univerziteta 2003 godine. Bio sam član Nacionalnog savjeta za naučno-istraživačku djelatnost. Od marta 2007 do avgusta 2008 godine obavljao sam funkciju prorektora za nastavu na Univerzitetu Crne Gore. U periodu 2008-2014 bio sam rektor Univerziteta Crne Gore. Za vanrednog člana Crnogorske akademije nauka i umjetnosti izabran sam u decembru 2008.

Biografija

Borko Vujičić je rođen 20. 02. 1959. u Kazancima, opština Bosansko Grahovo, u bivšoj Bosni i Hercegovini, gde je i završio osnovnu školu. Gimnaziju je završio u Livnu 1978. Te godine se upisao na Odsek za fiziku Prirodno-matematičkog fakulteta Univerziteta u Beogradu. Diplomirao je 1983. na smeru *teorijska fizika* sa diplomskim radom iz oblasti statističke fizike. Od 15. 12. 1983. do danas radi na Prirodno-matematičkom fakultetu Univerziteta Crne Gore. U vojski je proveo čitavu 1987. godinu.

Od januara 1988. do jula 1991. proveo je na usavršavanju na Fizičkom fakultetu Moskovskog državnog univerziteta na katedri za fiziku niških temperatura i superprovodnost. Taj period je dr Vujičić iskoristio za intenzivan naučni rad i učenje. Redovno je posećivao, i u njemu aktivno učestvovao, seminar iz superprovodnosti na katedri na kojoj je bio. Takođe je redovno posećivao i seminar u Institutu za fizičke probleme, kao i opštemoskovski seminar u Fizičkom institutu Akademije nauka SSSR (FIAN). Pored toga, redovno je pohadjao i specijalističke kurseve iz oblasti za koju se opredelio: superprovodnost, kvantna teorija čvrstog stanja i kinetički procesi u čvrstom stanju. Magisterski rad pod nazivom *Anomalne temperaturske zavisnosti termodinamičkih karakteristika superprovodnih superrešetki* odbranio je u februaru 1991. na Fizičkom fakultetu Univerziteta u Beogradu. U zvanje asistenta izabran je 1991.

Doktorsku disertaciju pod nazivom *Magnetne osobine visokotemperaturnih superprovodnika* odbranio je u julu 1996. na Fizičkom fakultetu Univerziteta u Beogradu. U zvanje docenta za predmete *Statistička fizika* i *Fizika čvrstog stanja* izabran je 1997, u zvanje vanrednog profesora za iste predmete 2002, a redovnog 2010.

Dr Vujičić govori ruski i engleski jezik.

We also have employed a new technique that combined STM or AFM with HRTEM to characterized interface properties and their effect on Schottky barrier height. We studied the effect of carbon nanotube contacts on transport properties and performance of thin film transistor.

Major achievement: We have fabricated highly sensitive carbon nanotube thin film transistors and studied the microscopy of contacts and doping effects. The study provided a valuable information on the mechanism of single molecule detection. (Nano Res. 2012, Journal of Chemical Physics C, 2013).

Sept. 2007- July 2009

Visiting Professor at Ohio University, Ohio, USA.

Research themes : Molecular scale organic superconductivity and dielectric properties of single wall carbon nanotubes.

Major achievement:

1. *Nanoscale confined superconducting condensate:*

We have fabricated the world smallest superconductor which is just 4 molecular pairs. This discovery opens up a great opportunity to test theories in a clean system thereby unraveling the mechanism and the nature of superconductivity right at the nanoscale.

2. *Assaying metallic and semiconducting nanotubes at room temperature:*

We have built a facile and fast technique to assay metallic and semiconducting nanotubes based on their dielectric response. We improve techniques further to include gating effects for application in carbon nanotube thin film transistors
