UNIVERZITET CRNE GORE  
SENATU  
CENTRU ZA DOKTORSKE STUDIJE

U prilogu akta dostavljamo PD prijavu za Msc Stefana Šćepanovića , sa sjednice Vijeća od 23. 04. 2024. godine.

Srdačan pozdrav,

Univerzitet Crne Gore  
Prirodno-matematički fakultet  
Džordža Vašingtona b.b.  
1000 Podgorica, Crna Gora

tel: +382 (0)20 245 204  
fax: +382 (0)20 245 204  
[www.pmf.ac.me](http://www.pmf.ac.me)

Broj: 2024/01-990/1  
Datum: 29.04.2024.

Na osnovu člana 64 Statuta Univerziteta Crne Gore i člana 34 Pravila doktorskih studija, Predloga komisije za doktorske studije PMF-a broj 2024/01-1017 od 15.04.2024.godine, na CXIII sjednici Vijeća Prirodno-matematičkog fakulteta održanoj dana 23.04.2024.godine, donijeta je

#### O D L U K A

I

Predlažemo Centru za doktorske studije i Senatu Univerziteta Crne Gore da imenuje Komisiju za ocjenu podobnosti teze i kandidata pod nazivom : "**Korelacija pulsnih događaja na grafenskim nanotrakama za memristivne primjene**" kandidata Stefana Šćepanovića, u sastavu:

1. Dr Predrag Miranović, redovni profesor PMF-a UCG (naučna oblast : fizika čvrstog stanja);
2. Dr Borko Vujičić, redovni profesor PMF-a UCG (naučna oblast: fizika čvrstog stanja) i
3. Dr Jovan Mirković, redovni profesor PMF-a UCG (naučna oblast: fizika čvrstog stanja)

#### *Obrazloženje:*

Stefan Šćepanović podnio je Vijeću fakulteta Prijavu doktorske teze pod nazivom : "**Korelacija pulsnih događaja na grafenskim nanotrakama za memristivne primjene**". Shodno članu 34 Pravila doktorskih studija, Vijeće je utvrdilo Predlog Odluke o imenovanju komisije za ocjenu doktorske teze i kandidata.

III

Odluka se dostavlja Senatu i Centru za doktorske studije Univerziteta Crne Gore na dalje postupanje.

## PRIJAVA TEME DOKTORSKE DISERTACIJE

<b>OPŠTI PODACI O DOKTORANDU</b>	
Titula, ime i prezime	Msc Stefan Šćepanović
Fakultet	Prirodno-matematički
Studijski program	Fizika
Broj indeksa	1/22
Ime i prezime roditelja	Srđan Šćepanović
Datum i mjesto rođenja	22.07.1997. godine
Adresa prebivališta	IV Proleterske Crnogorske Brigade, bb. Danilovgrad
Telefon	067 012 563
E-mail	<a href="mailto:stefansceparovic@gmail.com">stefansceparovic@gmail.com</a>
<b>BIOGRAFIJA I BIBLIOGRAFIJA</b>

<b>NASLOV PREDLOŽENE TEME</b>	
Na službenom jeziku	Korelacija pulsnih događaja na grafenskim nanotramama za memristivne primjene
Na engleskom jeziku	Correlations of spiking events on graphene nanoribbon for memristive applications
<b>Obrazloženje teme</b>	
<p>Predložena tema se odnosi na dizajn i neinvazivnu karakterizaciju novih nano-memristivnih materijala sa robusnim funkcionalnostima pogodnim za neuromorfno inženjerstvo. Ovi materijali su napravljeni od nanočestica legiranih metala koje su pričvršćene za grafenske nanotrake sa dielektričnim medijem. Novina transporta nanelektrisanja je u tome što kombinuje prednosti migracije pokretnih metalnih katjona vođenih poljem kroz anizotropnu dielektričnu matricu sa efektima gejtinga kao sekundarnog kanala.</p>	

Slično našim prethodnim studijama (Scientific Reports 2019, Nanomaterials 2021 i Particle and Particles Systems characterization 2023), pojedinačne i agregati metalnih nanočestica biće okarakterisani da bi se mapirala njihova memristivna svojstva prebacivanja u različitim dielektricima, koristeći provodnu mikroskopiju atomske sile, kao i konvencionalna mjerena sa dvije sonde. Zbog složenosti transporta nanelektrisanja u ovom sistemu, pitanja od značaja su adekvatno ispitana sistematskim studijama od jedne do nekoliko stotina nanočestica proizvedenih na vrhu AFM-a (memtips). Ovi memtips uređaji omogućavaju mjerena bez pojmeranja i s toga se vremenski zavisne korelacije događaja prebacivanja mogu lako dobiti, čak i na sobnoj temperaturi.

### Pregled istraživanja

#### 1. Uvod:

Memristor [1], memorijski otpornik sa dva terminala, teorijski ga je 1971. godine predložio Leon Čua [2] kao nedostajući element kola koji ispunjava nelinearnu vezu između nanelektrisanja ( $q$ ) i magnetnog fluksa ( $\Phi_m$ ); naime, otpor memristora ili memistansa ( $m$ ) =  $d\Phi_m / dq$ . Za razliku od drugih elemenata kola, memristor može da skladišti i obrađuje informacije što ga čini veoma pogodnim za projektovanje logike pune stanja sa sinaptičkim operacijama koje prevazilaze konvencionalnu Fon Nojmanovu elektronsku arhitekturu [3].

#### 2. Najsavremenije u predloženoj oblasti istraživanja i pregled relevantne literature:

Trenutni predlog se fokusira na dizajn i neinvazivnu karakterizaciju novih nano-memristivnih materijala sa robusnim funkcionalnostima pogodnim za neuromorfni inženjering. Neuromorfni inženjering opisuje nastojanje da se imitiraju neuronske strukture i prenesu određeni aspekti njihovih naprednih funkcionalnosti u elektronska kola [4-6]. Oblast je evoluirala kasnih 1980-ih oko rada Karvera Mida na realizaciji uređaja inspirisanih neuronima, poput adaptivne mrežnjače u smislu integrisanih elektronskih analognih sistema [7]. Od tada, koncept neuromorfnog inženjeringu je proširen na pristupe u rasponu od mreža dubokog učenja, koje se obično oslanjaju na konvencionalne von-Neumannove računarske uređaje i razrađen softver, do realizacije biološki inspirisanih računarskih paradigmi. Iako je poslednji pristup još uvijek daleko od dostizanja pune tehnološke zrelosti, on pokazuje izvanredno dugoročni potencijal za aplikacije jer daje velika obćanja za realizaciju visoko paralelnih, efikasnih, biološki motivisanih računarskih uređaja [8].

Svojstva transporta memristivnih uređaja imaju veoma slične karakteristike kao prihvatanje/oslobađanje jona u biološkim sinapsama. Ova sličnost između memristora i Hodgkin-Huklei moda za neurone je već pomenuta u radu L. Chua iz 1971. godine [2]. Ponašanje analognih višeslojnih prebacivačkih uređaja je veoma slično neuronskim sinapsama, gdje primjena impulsa napona izaziva postepenu reverzibilnu promjenu otpora. Modeli pulsnih neurona za pojedinačne neurone, kao i za sklopove neurona, su detaljno objašnjeni (V. Gerstner i V. Kistler [9]). U suštini, osnovno stanje neurona je stanje mirovanja i može biti pobuđen dovoljno velikim stimulusom da izloži naponski puls (akcioni potencijal). Nakon ovog pulsa, neuron je u refraktornom periodu i dalji pulsevi se efektivno potiskuju. Nakon povezivanja dva neurona sinapsom, promjena u sinaptičkoj težini, koja u suštini opisuje otpor ove veze, je vođena vremenskim intervalom između događaja pulseva u pre- i post-neuronu. Drugim riječima, adekvatan vremenski interval dovodi do jačanja sinaptičke veze, dok neusklađenost u vremenu pulseva dovodi do slabljenja veze. Ovo je takozvana plastičnost (STDP) koja je zavisna od vremena pulsa. U zavisnosti od vremenske razlike, sinaptička težina se povećava (dugotrajno potenciranje) ili smanjuje (dugotrajna depresija), što se u osnovi odnosi na učenje. Ovo ponašanje se lako reprodukuje pomoću vještačkih neuronskih i sinaptičkih uređaja zasnovanih na memristivnim uređajima [1, 10, 11]. Poslednjih godina, istraživanja su fokusirana na integraciju velikog broja takvih vještačkih sinapsi u nizove poprečnih šipki za praktične primjene. U ovom kontekstu, takođe su u fokusu istraživanja višeslojne mreže sa

jednim ili više skrivenih slojeva (slično kao u softverskom dubokom učenju). Dobar pregled istraživačkih aktivnosti u ovoj oblasti daju D. Ielmini et al. [12] i T. Chang et al. [13].

Osim što oponašaju STDP, memristivni uređaji se takođe razmatraju za realizaciju daljih biološki motivisanih funkcionalnosti, npr. adaptacija puls frekvencije je prijavljena u memristivno spregnutim oscilatorima [14, 15]. Jedan posebno važan aspekt u biološkim neuronskim mrežama je bliska veza između detekcije i obrade signala. Ustvari, neuroni se ne nalaze samo u našem mozgu, već su rasprostranjeni po cijelom ljudskom tijelu i služe za prenos i obradu senzornih signala. Do sada je ovaj aspekt (spoj detekcije i obrade signala) ostao u velikoj mjeri neistražen zbog nedostatka detaljnih informacija o fizici memristivnog stanja na nanoskali. Na osnovu prethodnih studija o ugljeničnim nanocjevčicama, razvili smo metodologiju [16-18] za mapiranje svojstava prebacivanja na nanorazmjeri [19]. Drugi otvoreni problem je statistička varijansa u svojstvima prebacivanja memristivnih uređaja koja ometa njihovu upotrebu u komercijalnim aplikacijama.

U nedavnim studijama [20, 21], bavili smo se ovim problemom integracijom memristivnog kanala na AFM vrh. Metodologija koju smo usvojili u tom radu nam je omogućila da mapiramo dugoročni odziv, koji je bio nedostupan prethodnim tehnikama.

### Cilj i hipoteze

Da bi se kontrolisalo memristivno djelovanje, potrebno je da se prevaziđe stanje tehnike i prvo se pozabavi vremenskom složenošću stohastičkih i korelacionih procesa (uključujući i pulsne događaje) za koje se pokazalo da su do sada veoma izazovna pitanja. Predoženo je rešenje ovih pitanja na sledeći način:

- Kanalisanje filamentarnog procesa od jedne ili više nanočestica kroz vrh specijalno dizajniranog AFM vrha. Ovo omogućava mjerena bez pomaka, što je ključ za dobijanje pouzdanih dugoročnih vremenskih i korelacionih studija.
- Drugi korak je da se iskoriste dielektrična svojstva GNR-a da se fokusira struja metalnih jona i svede stohastička varijabilnost na minimum za stabilan rad.
- Kontrolisanje nivoa memristivnog prebacivanja sa plazmonskim efektom, posebno preko pod-praga opsega ugljeničnih nanocjevki i GNR-a, što nikada ranije nije urađeno.

### Materijali, metode i plan istraživanja

Plan istraživanja:

Cilj istraživanja je da se iskoristi hibridno dejstvo između karakteristika efekta polja GNR ili mreže tankog filma ugljeničnih nanocjevki i difuznih memristivnih svojstava nanočestica legiranih metala. Istraživanje je dizajnirano tako da se postignu 3 prekretnice:

#### 1. Lokalno memristivno uključivanje na metalni SWCNT:

U prvoj godini se radi na optimizaciji dielektričnih svojstava GNR-a i nanočestica iz posebno pripremljenih metalnih meta, kao što je AgAu legura. Korišćenjem anizotropnih osobina SWCNT i/ili grafenske nanotrake (GNR), dielektrična matrica će biti projektovana da minimizira varijacije u filamentarnoj putanji između AFM vrha i ugljenične nanocjevki.

Da bi se identifikovao početak jonske emisije i relevantni mehanizam transporta jona, svaki tip legiranih nanočestica će se sistematski proučavati korišćenjem neinvazivnih C-AFM tehnika. Slično našim prethodnim studijama, Scientific Reports, 2019, potrebno je da tražimo optimizovanu kompoziciju, kao i dielektričnu matricu da bismo dobili stabilne memristivne akcije pri relativno niskom naponu (ispod 2 volta). Ovaj proces je veoma važan prije uključivanja SWCNTs mreže u dielektričnu matricu.

U cilju proučavanja mehanizma transporta nanelektrisanja izvršice se prostorno mapiranje električnih svojstava, koristeći pristup mješovite povratne sprege. Fokusiranjem na jednu po jednu nanočesticu, mogući scenariji transporta nanelektrisanja, kao što su skakanje promjenljivog opsega, tuneliranje uz pomoć fluktuacije, difuzija, itd. mogu se identifikovati korišćenjem takvih lokalnih tehnika. U ovom slučaju, jedna nanočestica se može lako identifikovati kroz varijacije u lokalnim dielektričnim funkcijama, kao i fazno snimanje, tako da se IV karakteristike dobijaju na određenoj poziciji.

Ovdje je važno napomenuti da je izabrano da se izvrši karakterizacija na metalnoj jednozidnoj nanocjevcici, kako bi se precizno pratila memristivna struja, pomocu uzetih lokalnih spektra na i van nanočestice. Na taj način moguće je testirati različite legirane NP i izvući relevantna električna svojstva. Pored toga, očekuje se da će netaknuti metalni CNT pokazati slične vrijednosti za pokretljivost elektrona i šupljina, što će takođe pomoći da se izbjegne asimetrija između transporta elektrona i rupa, tj. uređaji mogu podjednako da rade i u direktnim i u reverznim karakteristikama (što je veoma važno za logičke kapije).

## 2. Dejstvo kapije memristivnih uređaja:

Jedno od najistaknutijih svojstava netaknutog poluprovodničkog SWCNT-a je sposobnost podešavanja električne struje u velikom opsegu preko gajtinga polja. Ovdje će fokus biti na srž studija mapiranjem interakcije između memristivnih radnji u blizini pod-prag opsega uređaja. Na osnovu prethodnih C-AFM studija SWCNT-a i drugih materijala, gejting je izuzetno moćan alat za kontrolu memristivne struje u velikom dinamičkom opsegu i s toga se može koristiti kao ključni parametar za variranje memristivnog stanja i izvođenje logičkih operacija. Kombinovana akcija pojačanja signala, otpornog skladištenja i logičkih operacija čini ovaj uređaj veoma relevantnim za neuromorfne proračune.

Prvo se uređaj proizvodi selektivnim deponovanjem netaknutih poluprovodničkih SWCNT-a, korišćenjem reaktora sa plutajućim katalizatorom koji je opremljen suvom elektroforetskom tehnikom. Korišćenjem ovog procesa, dobijamo uređaj koji je 95% napravljen od poluprovodničkog SWCNT-a koji direktno premošćuje metalne jastučice. Ovi metalni jastučići djeluju kao izvorne i odvodne elektrode za jednocijevni uređaj. Ponašanje poluprovodnika se verificuje ili izmjeranim dielektričnim odzivom ili konvencionalnim efektom polja preko lokalnog AFM kontakta ili globalnog zadnjeg gejta.

U zavisnosti od predznaka AFM vrha u odnosu na SWCNT, nanelektrisanja se mogu preferencijalno uskladištiti ili iscrpiti lokalno, što olakšava pokretanje i podešavanje memristivnog dejstva pri relativno niskom naponu u SWCNT-u. U svakom slučaju, preduslov je nametnut pokretačkom naponu da ne izazove struktturnu degradaciju samog SWCNT-a. Uz pomoć zadnje kapije, rad uređaja se pokreće unutar pod-prag područja kako bi se maksimizirale performanse tako da se memristivna struja pokreće kroz veliki dinamički opseg. Neka pitanja od značaja su sažeta u nastavku:

1. Mehanizam transporta nanelektrisanja.
2. Maksimalna memristivna struja.
3. Prozor pouzdanosti rada „SET i RESET vrijednosti“.
4. Vrijednost memristivnog stanja.
5. Otpornost uređaja na produženi rad.
6. Optički modulisana memristivna akcija.

Pošto je od interesa primjena uređaja, ukupne IV karakteristike će se mjeriti sa konvencionalnim mjerjenjima jednosmjerne struje da bi se proizveli prototip uređaji za jednostavne logičke kapije.

### 3. Optički modulisani GNR i SWCNT memristor;

Poslednja prekretnica u istraživanju je prikupljanje pojačanja bliskog polja između nanočestica, kako bi se pokrenuli putevi za efikasan transport jona. U ovim eksperimentima biće dizajniran sistem, tako da uključuje rezonantne optičke impulse sa ograničenim površinskim plazmonima nanočestica (200-500 nm). Intenzitet i vremenske oznake na ovim rezonantnim signalima bi djelovale kao obrazac učenja za memristivne uređaje. Sposobnost memristivnih struja da emuliraju profil signala sa vremenskim žigom će se istražiti za nadgledano učenje. Imajući to na umu, uređaj radi unutar pod-prag oblasti, tako da je memristivno djelovanje olakšano (kao i modulisano) izvorom svjetlosti dalekog polja. Prvo će se studija izvoditi na memtip uređajima različitog radijusa zakrivljenosti prije nego što se primjeni na makroskopske uređaje.

Moguća jaka sprega ograničenih površinskih plazmona i pojačanje bliskog polja između pojedinačnih nanočestica može djelovati kao okidač posrednog koherentnog prebacivanja u većim sistemima nanočestica. Iz tog razloga, proučavaće se vremenski zavisni efekat korelacije optički modulisanih memristora mijenjajući veličine sistema da bi se uključilo od nekoliko do par stotina nanočestica.

### Očekivani naučni doprinos

Postoji nekoliko zanimljivih očekivanih rezultata ovih istraživanja, na primjer:

1. Optimizovana sinteza, distribucija i karakterizacija i numeričke simulacije nanočestica sa anizotropnom dielektričnom matricom na raznim metalnim površinama.
2. IV mjerjenja bez drifta jedne i nekoliko nanočestica na sobnoj temperaturi.
3. Izvještaj o stohastičkoj varijansi i kako na nju utiču dielektrična anizotropija i prečnik vrha.
4. Optički modulisana memristivna akcija sa GNR-om.

**FIZIKA**

Broj dosjeda: 1/2022

Na osnovu člana 33 Zakona o upravnom postupku (Službeni list CG, br. 56/14, 20/15, 40/16 i 37/17), člana 115 Zakona o visokom obrazovanju (Službeni list CG, br. 44/14, 52/14, 47/15, 40/16, 42/17, 71/17, 55/18, 3/19, 17/19, 47/19, 72/19, 74/20 104/21) i službene evidencije, a po zahtjevu studenta Šćepanović (Srđan) Stefan, izdaje se

### **UVJERENJE O POLOŽENIM ISPITIMA**

Student **Šćepanović (Srđan) Stefan** rođen **22.07.1997.** godine u mjestu **Podgorica**, opština **Podgorica**, Republika **Crna Gora** upisan je studijske **2022/2023** godine u I godinu studija, kao student koji se **finansira samostalno** na **doktorske akademske studije**, studijski program **FIZIKA**, koji realizuje **PRIRODNO MATEMATIČKI FAKULTET** Univerziteta Crne Gore u trajanju od **3 (tri)** godine sa obimom od **180 ECTS** kredita

Student je polozio ispite iz sljedećih predmeta:

Red. broj	Se	Naziv predmeta	Datum polaganja	Ocjena	Uspjeh	Broj ECTS kredita
1.	1	EKSPERIMENTALNI METODI IZUČAVANJA NANOSTRUKTURA	12.12.2023.	'A'	(odličan)	10.00
2.	1	FIZIKA NANOMATERIJALA	12.12.2023.	'A'	(odličan)	10.00
3.	1	METODE FABRIKACIJE NANOSTRUKTURA	12.12.2023.	'A'	(odličan)	10.00
4.	1	VIŠI KURS KVANTNE MEHANIKE	12.12.2023.	'B'	(vrlo dobar)	10.00

Zaključno sa rednim brojem 4.

Ostvareni uspjeh u toku studija:

- srednja ocjena položenih **(A) 9.75**
- broj osvojenih ECTS kredita **40.00 ili 66.6 %**
- indeks uspjeha **6.50**

Uvjerenje se izdaje na osnovu službene evidencije, a u svrhu ostvarenja prava na: (djeci dodatak, porodičnu penziju, invalidski dodatak, zdravstvenu legitimaciju, povlašćenu vožnju za gradski saobraćaj, studentski dom, studentski kredit, stipendiju, regulisanje vojne obaveze i slično).

Broj: -

Podgorica 12.04.2024.

На основу члана 75 stav 2 Zakona o visokom obrazovanju (Sl.list RCG br. 60/03.) i člana 18 Statuta Univerziteta Crne Gore, Senat Univerziteta Crne Gore, na sjednici održanoj 23.11.2006. godine, donio je

## ОДЛУКУ О ИЗБОРУ У ЗВАНЈЕ

Dr PREDRAG MIRANOVIC bira se u akademsko званје redovni profesor Univerziteta Crne Gore za predmet Kvantna fizika na Prirodno-matematičkom fakultetu u Podgorici.

РЕКТОР,  
Prof.dr Ljubiša Stanković

## Predrag Miranović -biografija-

Roden sam 12 decembra 1966. godine u Podgorici, Crna Gora, gdje sam završio osnovnu školu i gimnaziju. Nakon odsluženja vojnog roka u JNA upisao sam 1986. godine studije fizike na Prirodno-matematičkom fakultetu Univerziteta Crne Gore. Studije sam završio u redovnom roku oktobra 1990. godine sa prosječnom ocjenom 9,63. Proglašen sam za najboljeg diplomiranog studenta Univerziteta Crne Gore za školsku 1989/90 i dobio Plaketu Univerziteta Crne Gore.

Odmah nakon završetka studija sam angažovan kao asistent-pripravnik na Univerzitetu Crne Gore. Upisao sam postdiplomske magistarske studije na Fizičkom fakultetu u Beogradu, i paralelno izvodio vježbe na Odsjeku za fiziku u Podgorici. Magistarski rad pod nazivom "NMR linije u visokotemperaturnim superprovodnicima" sam odbranio u oktobru 1993. godine. Kako bih se potpuno posvetio izradi doktorske disertacije u periodu 1993-1995 godine sam bio radno angažovan na Institutu za Fiziku u Zemunu. Doktorsku disertaciju "Magnetoelastični efekti u anizotropnim superprovodnicima" pod mentorstvom Ljiljane Dobrosavljević-Grujić sam odbranio u martu 1996. godine na Fizičkom fakultetu u Beogradu. Rezultati iz doktorske disertacije su objavljeni u dva rada u časopisu Američkog fizičkog društva, Physical Review B. Na osnovu toga sam nagrađen od strane Crnogorske akademije nauka i umjetnosti nagradom iz fonda Petra Vukčevića za uspjeh u istraživačkom radu u periodu 1993-1995. Nakon odbrane doktorske disertacije, u junu 1996. godine sam izabran u zvanje docent za predmet *Kvantna Mehanika* na Univerzitetu Crne Gore.

Tokom ljeta 1996. godine sam započeo saradnju sa Vladimirom G. Koganom na problemu raspodjele magnetnog polja unutar borokarbidičnih superprovodnika, a rad sam dovršio za vrijeme studijskih boravaka u Ames National Laboratory, Iowa, USA, tokom decembra 1996. i aprila 1997. godine. Dva rada, koja su proizilašla tokom boravaka u Ajovi, su bili na veoma dobar prijem kod međunarodne naučne javnosti i citirani su preko 100 puta. Na poziv profesora Kenza Miye u periodu jun 1997 – jun 1998 godine sam boravio na Univerzitetu u Tokiju, u zvanju *Lecturer*. Nakon povratka iz Japana, boravio sam dva mjeseca na Oak Ridge National Laboratory, Tennessee, USA kod profesora D. K. Christena. Tamo sam dovršio rad na temu „Flux lattice symmetry in V<sub>3</sub>Si: Nonlocal effects in a high-kappa superconductor“ koji je po ocjeni Editora zavrijedio da se predstavi u Physical Review Focus (izdanje od 24. juna 1999. godine). Nakon povratka iz USA radio sam na Institutu za Fiziku u Zemunu u zvanju naučni saradnik. Na Univerzitet Crne Gore sam se vratio u ljetu 1999. godine. U zvanje vanredni profesor za predmet *Kvantna fizika* sam izabran 2001. godine. Na konkursu Japanskog društva za promociju nauke sam dobio postdoktorsku stipendiju koja mi je omogućila boravak na Univerzitetu u Okajami kod profesora Kazušige Mačide u periodu 2001-2003. Za vrijeme specijalizacije sam uspio da razvijem posebnu metodu za numeričko rješavanje mikroskopskih jednačina superprovodnosti koja je omogućila mnogo lakšu analizu velikog broja problema koji se tiču termodinamičkih i transportnih osobina superprovodnika.

Plodnu saradnju sa Univerzitetom u Okayami sam nastavio i nakon povratka na Univerzitet Crne Gore.

Nakon povratka iz Japana sam se, pored nauke i nastave, posvetio i drugim aktivnostima. U periodu 2004-2006 godine sam bio predsjednik Društva fizičara Srbije i Crne Gore. U oktobru 2006. godine sam izabran u zvanje redovni profesor. Vijeće Prirodno-matematičkog fakulteta me je izabralo za člana Nastavno-naučnog vijeća, odnosno Senata Univerziteta 2003 godine. Bio sam član Nacionalnog savjeta za naučno-istraživačku djelatnost. Od marta 2007 do avgusta 2008 godine obavljao sam funkciju prorektora za nastavu na Univerzitetu Crne Gore. U periodu 2008-2014 bio sam rektor Univerziteta Crne Gore. Za vanrednog člana Crnogorske akademije nauka i umjetnosti izabran sam u decembru 2008.

Školovanje:

1986-1990 BSc Fizika, Univerzitet Crne Gore, Prirodno-matematički fakultet

1990-1993 MSc Fizika, Univerzitet u Beogradu, Fizički fakultet

1993-1996 PhD Fizika, Univerzitet u Beogradu, Fizički fakultet  
Doktorska disertacija *Magneto-elastični efekti u anizotropnim superprovodnicima*  
Mentor: Ljiljana-Dobrosavljević-Grujić

Profesionalne pozicije:

1996-2001 Docent na Univerzitetu Crne Gore

1997-1998 Lecturer na Univerzitetu u Tokiju, Japan

1997-1999 Naučni saradnik, Institut za Fiziku, Zemun, Srbija

2001-2003 Stipendista Japanskog društva za promociju nauke na Univerzitetu u Okayami, Japan

2006- Redovni profesor na Univerzitetu Crne Gore

2004-2006 Predsjednik Društva fizičara Srbije i Crne Gore

2003- 2014 Član Senata Univerziteta Crne Gore

2007- 2008 Prorektor za nastavu Univerziteta Crne Gore

2007- 2010 Član Nacionalnog savjeta za naučno-istraživačku djelatnost.

2008- 2014 Rektor Univerziteta Crne Gore

2008- 2018 Vanredni član CANU

2018 - Redovni član CANU

Nagrade i suspendije:

- Plaketa Univerziteta Crne Gore kao najbolji diplomirani student Univerziteta za školsku 1989/90.
- Nagrada CANU iz fonda Petra Vukčevića za uspjeh u istraživačkom radu u periodu 1993-1995.

- Postdoktorska stipendija stipendija Japanskog društva za promociju nauke za period 2001-2003

#### Studijski boravci:

1996 (Decembar)	Ames National Laboratory, Ames, Iowa, USA (prof. V. G. Kogan)
1997 (April)	Ames National Laboratory, Ames, Iowa, USA (prof. V. G. Kogan)
1997-1998	Faculty of engineering, University of Tokio, Japan (prof. K. Miya)
1998 (Avgust)	Oak Ridge National Laboratory, Tennessee, USA (prof. D. K. Christen)
2001-2003	Department of Physics, Okayama University, Japan, (prof. K. Machida)
2004 (Januar)	Department of Physics, Okayama University, Japan, (prof. K. Machida)
2006 (Januar)	Department of Physics, Okayama University, Japan, (prof. K. Machida)
2007 (Januar)	Department of Physics, Okayama University, Japan, (prof. K. Machida)
2008 (Januar)	Department of Physics, Okayama University, Japan, (prof. K. Machida)

#### Publikacije:

Koautor sam u 40 radova objavljenih u renomiranim naučnim časopisima (koji su na SCI listi) kao što su časopisi Američkog fizičkog društva (Physical Review Letters, Physical Review B) i Japanskog fizičkog društva (Journal of Physical Society of Japan).

#### Spisak radova

1. Title: Zero bias conductance in d-wave superconductor/ferromagnet/d-wave superconductor trilayers

Author(s): Popović, Z; Miranović, P.; Zikic R.

Source: PHYSICA STATUS SOLIDI B Volume: Issue: Article Number: 1700554  
Published: 2018

2. Title: Anisotropy of spin polarized transport in ferromagnet/d-wave superconductor bilayer: Role of small exchange field

Author(s): Popović, Z; Miranović, P.

Source: PROGRESS OF THEORETICAL AND EXPERIMENTAL PHYSICS Volume Issue:  
Article Number:  
To Be Published: 2018

3. Title: Generic first order orientation transition of vortex lattice in type II superconductors

Author(s): Suzuki, M. Kenta; Inoue, Kenji; Miranović, Predrag; Ichioka, Masanori;  
Machida, Kazushige

Source: JOURNAL OF THE PHYSICAL SOCIETY OF JAPAN Volume: 79 Issue: 1 Article  
Number: 013702  
Published: 2010

4. Title: Field-angle-dependent specific heat measurements and gap determination of a heavy fermion superconductor URu<sub>2</sub>Si<sub>2</sub>

Author(s): Yano, K.; Sakakibara, T.; Tayama, T.; Yokoyama, M.; Amitsuka, H.;  
Homma, Y.; Miranović, P.; Ichioka, M.; Tsutsumi, Y.; Machida, K.

Source: PHYSICAL REVIEW LETTERS Volume: 1 Issue: 1 Article Number: 017004  
Published: 2008

5. Title: Low energy excitations in the mixed state of the anisotropic s-wave superconductor  
CeRU2

Author(s): Yamada, Atsushi; Sakakibara, Toshiro; Custers, Jeroen; Hedo, Masato; Ōnuki, Yoshichika; Miranović, Predrag; Machida, Kazushige

Source: JOURNAL OF THE PHYSICAL SOCIETY OF JAPAN Volume: 76 Issue: 12 Article Number: 123704 Published: 2007

6. Title: Electronic thermal conductivity in a superconducting vortex state

Author(s): Adachi, H.; Miranovic, P.; Ichioka, M.; Machida, K.

Source: PHYSICA C-SUPERCONDUCTIVITY AND ITS APPLICATIONS Volume: 463 Pages: 36-39 Published: 2007

7. Title: Quasiclassical calculation of the quasiparticle thermal conductivity in a mixed state

Author(s): Adachi, Hiroto; Miranović, Predrag; Ichioka, Masanori; Machida, Kazushige

Source: JOURNAL OF MAGNETISM AND MAGNETIC MATERIALS Volume: 310 Issue: 2 Pages: 640-642 Part: Part 1 Published: 2007

8. Title: Quasi-classical calculation of the mixed-state thermal conductivity in s- and d-wave superconductors

Author(s): Adachi, Hiroto; Miranović, Predrag; Ichioka, Masanori; Machida, Kazushige  
Source: JOURNAL OF THE PHYSICAL SOCIETY OF JAPAN Volume: 76 Issue: 6 Article Number: 064708 Published: 2007

9. Title: Effect of field-dependent core size on reversible magnetization of high-kappa superconductors

Author(s): Kogan, V. G.; Prozorov, R.; Bud'Ko, S. L.; Canfield, P. C.; Thompson, J. R.; Karpinski, J.; Zhigadlo, N. D.; Miranović, P.

Source: PHYSICAL REVIEW B Volume: 74 Issue: 18 Article Number: 184521 Published: 2006

10. Title: Ubiquitous V-shape density of states in a mixed state of clean limit type II superconductors

Author(s): Nakai, N.; Miranović, P.; Ichioka, M.; Hess, H. F.; Uchiyama, K.; Nishimori, H.; Kaneko, S.; Nishida, N.; Machida, K.

Source: PHYSICAL REVIEW LETTERS Volume: 97 Issue: 14 Article Number: 147001 Published: 2006

11. Title: Basal-plane magnetic anisotropies of high-k d-wave superconductors in a mixed state: A quasiclassical approach

Author(s): Adachi, Hiroto; Miranović, Predrag; Ichioka, Masanori; Machida, Kazushige

Source: JOURNAL OF THE PHYSICAL SOCIETY OF JAPAN Volume: 75 Issue: 8 Article Number: 084716 Published: 2006

12. Title: Specific heat and low-lying excitations in the mixed state for a type-II superconductor

Author(s): Nakai, N.; Miranović, P.; Ichioka, M.; Machida, K.

Source: PHYSICAL REVIEW B Volume: 73 Issue: 17 Article Number: 172501 Published: 2006

13. Title: Theory of gap-node detection by angle-resolved specific heat measurement

Author(s): Miranovic, P.; Ichioka, M.; Machida, K.; Nakai, N.

Source: JOURNAL OF PHYSICS-CONDENSED MATTER Volume: 17 Issue: 50 Pages: 7971-7980 Published: 2005

14. Title: Theoretical study on the field dependence of the zero energy density of states in an anisotropic gap superconductors

Author(s): Nakai, N.; Miranović, P.; Ichioka, M.; Machida, K.

Source: JOURNAL OF PHYSICS AND CHEMISTRY OF SOLIDS Volume: 66 Issue: 8-9 Pages: 1362-1364 Published: 2005

15. Title: Field-angle-dependent specific heat in the unconventional heavy-fermion superconductor CeCoIn<sub>5</sub>

Author(s): Aoki, H.; Sakakibara, T.; Shishido, H.; Settai, R.; Onuki, Y.; Miranović, P.; Machida, K.

Source: PHYSICA B-CONDENSED MATTER Volume: 359 Pages: 410-412 Published: 2005

16. Title: Anisotropic diamagnetic response in type-II superconductors with gap and Fermi-surface anisotropies

Author(s): Adachi, H.; Miranović, P.; Ichioka, M.; Machida, K.

Source: PHYSICAL REVIEW LETTERS Volume: 94 Issue: 6 Article Number: 067007 Published: 2005

17. Title: Electronic state around vortex in a two-band superconductor

Author(s): Ichioka, Masanori; Machida, Kazushige; Nakai, Noriyuki; Miranović, Predrag

Source: PHYSICAL REVIEW B Volume: 70 Issue: 14 Article Number: 144508 Published: 2004

Nationality

Montenegrin

Date of birth

July 31, 1961

Gender

Male

Desired employment /  
Occupational field

Physics – research and education

## Work experience

Dates

2008 – present

Occupation or position held

Full professor

Main activities and responsibilities

Education and research in physics, materials science and nanotechnologies

Teaching courses:

- Experimental Physics (Faculty of Sciences and Mathematics, Department of Physics)
- Biophysics (Department of Biology)
- History and Philosophy of Physics (Department of Physics)
- Modern Physics - Solid State Physics (Department of Physics) – Graduate School
- Automatic Data Acquisition (Department of Physics) – Graduate School
- General Physics (Faculty of Mechanical Engineering)
- Biophysics (Faculty of Medicine)
- Biophysics (School of Dental Medicine)
- Dental materials – physics contest (School of Dental Medicine)
- Physics and Philosophy (Faculty of Economics)
- The Japanese Economy (Faculty of Economics)
- Low temperature physics and superconductivity

Name and address of employer	Faculty of Science and Mathematics University of Montenegro, George Washington Str, bb, 81 000, Podgorica, Montenegro
Visiting professor, Graduate School of Pure & Applied Sciences, University of Tsukuba, Japan	
Type of business or sector	Public sector - High Education
Dates	2005 - 2010
Occupation or position held	Associate professor
Main activities and responsibilities	<p>Teaching courses:</p> <ul style="list-style-type: none"> <li>• Experimental Physics (Faculty of Natural Sciences and Mathematics – FNSM, Department of Physics)</li> <li>• Courses of Vacuum Physics - Solid State Physics (FNSM, Department of Physics) – MSc level</li> <li>• Auto natic Data Acquisition (FNSM, Department of Physics) – MSc level</li> <li>• Physics and Philosophy (Faculty of Economics)</li> <li>• The Japanese Economy (Faculty of Economics)</li> </ul> <p>2003 COE 21st Century Researcher, University of Tsukuba, JAPAN,      2003-2005 Researcher, 21st Century Center of Excellence Program, University of Tsukuba      2006 Visiting Professor, University of Tsukuba, Japan</p> <p>Research in Superconductivity and Nano-engineering; S&amp;T in Montenegro; Science popularization.</p> <p>Projects:</p> <ul style="list-style-type: none"> <li>• „Theoretical and experimental investigation of thermodynamic and transport properties of superconductors“ Ministry of Education and Science, Montenegro, 2005-2007,</li> <li>• „Introduction to Experimental Physics“, Course development program (CDP+), WUW-Austria, 2004</li> <li>• „Multidisciplinary Centre for Experimental Study“, WUW-Austria, 2003</li> </ul>
Name and address of employer	Faculty of Science and Mathematics, University of Montenegro, George Washington Str. bb, 81 000, Podgorica, Montenegro
Type of business or sector	Public sector - High Education
Dates	1997- 2002
Occupation or position held	Assistant professor
Main activities and responsibilities	<p>Teaching courses:</p> <ul style="list-style-type: none"> <li>• Introduction to experimental physics (Faculty of Science and Mathematics, Department of Physics)</li> <li>• Physics (Faculty of Electrical Engineering)</li> <li>• Physics (Faculty of Civil Engineering)</li> </ul> <p>Research in vortex dynamics of high-temperature superconductors.</p>
Name and address of employer	1997-2000 CREST (JST) Researcher, Institute of Materials Science, University of Tsukuba
	Faculty of Natural Sciences and Mathematics, University of Montenegro, George Washington Str bb 81 000, Podgorica, Montenegro
Type of business or sector	Public sector - High Education
Dates	1996
Occupation or position held	1996 Post-doctoral STA fellow, National Research Institute for Metals, Tsukuba, Japan

Main activities and responsibilities	Research – experimental study of vortex dynamics In high-temperature superconductors.
Name and address of employer	Science and Technology Agency of Japan, National research Institute for Metals, Tsukuba,
Type of business or sector	Public sector – Scientific Research
Dates	1991 - 1994
Occupation or position held	Researcher
Main activities and responsibilities	Research – electromagnetic properties of ceramic and melted high-temperature superconductors
Name and address of employer	Moscow State University "M. V. Lomonosov", Faculty of Physics, Russia
Type of business or sector	All Russian Electric Engineering Institute, Moscow, Russia
	Public sector – Education and Research
Dates	1987-1990
Occupation or position held	Research fellow
Main activities and responsibilities	Teaching assistant Teaching courses / experimental and theoretical exercises: • Physics - Faculty o' Electrical Engineering, Faculty of Civil Engineering, Faculty of Metallurgy and Technology, Faculty of mathematics and Natural Sciences – Biology Department
Name and address of employer	Institute of Mathematics and Physics, University of Veljko Vlahovic, Montenegro, Cetinjski put bb, 81 000, Titograd, Montenegro
Type of business or sector	Public sector – High Education
<b>Education and training</b>	
Dates	1996
Title of qualification awarded	PhD in Physics
Principal subjects/occupational skills covered	Condensed Matter Physics – High Temperature Superconductors
Name and type of organisation providing education and training	Moscow State University "M. V. Lomonosov", Faculty of Physics, Russia
Level in national or international classification	PhD
Title of qualification awarded	BSc in Physics (4 years studies)
Principal subjects/occupational skills covered	Physics
Name and type of organisation providing education and training	Institute of Mathematics and Physics, University of Veljko Vlahovic, Titograd, Montenegro, Yugoslavia
Level in national or international classification	BSc
<b>Personal skills and competences</b>	<p>Scientific disciplines:</p> <ul style="list-style-type: none"> <li>• Physics</li> <li>• Solid State Physics.</li> </ul> <p>Specific research subjects:</p> <ul style="list-style-type: none"> <li>• Experimental solid state physics</li> <li>• Superconductivity</li> <li>• Nanotechnology</li> </ul>
<b>Experience:</b>	

- » Project Management
- » Foresight analysis
- » Science communication

На основу члана 75 stav 2 Zakona o visokom obrazovanju (Sl.list RCG br. 60/03) i člana 18 Statuta Univerziteta Crne Gore, Senat Univerziteta Crne Gore, na sjednici održanoj 25.03.2010. godine, donio je

## ODLUKU O IZBORU U ZVANJE

Dr BORKO VUJIČIĆ bira se u akademsko zvanje redovni profesor Univerziteta Crne Gore za predmete: Statistička fizika i Fizika čvrstog stanja na Prirodno-matematičkom fakultetu.

REKTOR  
*Мирдраг Мирановић*  
Prof.dr Predrag Miranović

## Biografija

Borko Vujičić je rođen 20. 02. 1959. u Kazancima, opština Bosansko Grahovo, u bivšoj Bosni i Hercegovini, gde je i završio osnovnu školu. Gimnaziju je završio u Livnu 1978. Te godine se upisao na Odsek za fiziku Prirodno-matematičkog fakulteta Univerziteta u Beogradu. Diplomirao je 1983. na smeru *teorijska fizika* sa diplomskim radom iz oblasti statističke fizike. Od 15. 12. 1983. do danas radi na Prirodno-matematičkom fakultetu Univerziteta Crne Gore. U vojsci je proveo čitavu 1987. godinu.

Od januara 1988. do jula 1991. proveo je na usavršavanju na Fizičkom fakultetu Moskovskog državnog univerziteta na katedri za fiziku niskih temperatura i superprovodnost. Taj period je dr Vujičić iskoristio za intenzivan naučni rad i učenje. Redovno je posećivao, i u njemu aktivno učestvovao, seminar iz superprovodnosti na katedri na kojoj je bio. Takođe je redovno posećivao i seminar u Institutu za fizičke probleme, kao i opštemoskovski seminar u Fizičkom institutu Akademije nauka SSSR (FIAN). Pored toga, redovno je pohadjao i specijalističke kurseve iz oblasti za koju se opredelio: superprovodnost, kvantna teorija čvrstog stanja i kinetički procesi u čvrstom stanju. Magistarski rad pod nazivom *Anomalne temperaturske zavisnosti termodinamičkih karakteristika superprovodnih superrešetki* održan je u februaru 1991. na Fizičkom fakultetu Univerziteta u Beogradu. U zvanje asistenta izabran je 1991.

Doktorsku disertaciju pod nazivom *Magnetne osobine visokotemperaturnih superprovodnika* održan je u julu 1996. na Fizičkom fakultetu Univerziteta u Beogradu. U zvanje docenta za predmete *Statistička fizika* i *Fizika čvrstog stanja* izabran je 1997, u zvanje vanrednog profesora za iste predmete 2002, a redovnog 2010.

Dr Vujičić govori ruski i engleski jezik.
