---

**EPA - Environmental Protection Agency**

<http://www.epa.gov/>

□ Agencija se bavi problemima:

- Zaštite vode, vazduha i zemljišta od zagađenja
- Klimatskih promena
- „Greener Living“
- Otpada

□ Aktivnosti Agencije podrazumevaju:

- Razvijanje standarda i propisa
- Finansiranje različitih projekata za rešavanje prethodno navedenih problema
- Naučno istraživački rad

Modelira distributivnu mrežu pod pritiskom

Hidrauličko modeliranje + Modeliranje kvaliteta vode

## KOMUNALNA HIDROTEHNIKA 1 !

# EPA SWMM 5.1?

SWMM (*Storm Water Management Model*) je distributivni dinamički model za simulaciju padavina i oticaja koji se koristi za pojedinačne epizode ili dugotrajne (kontinualne) simulacije kvantiteta i kvaliteta oticaja, pre svega u urbanim sredinama.

# Modeliranje i SWMM?

## SWMM MODEL

PADAVINE +  
UPOTREBLJENA VODA  
(ulaz)

MODEL  
(Sliv+Kan.Mreža)

OTICAJ +  
PROTOK U MREŽI  
(izlaz)

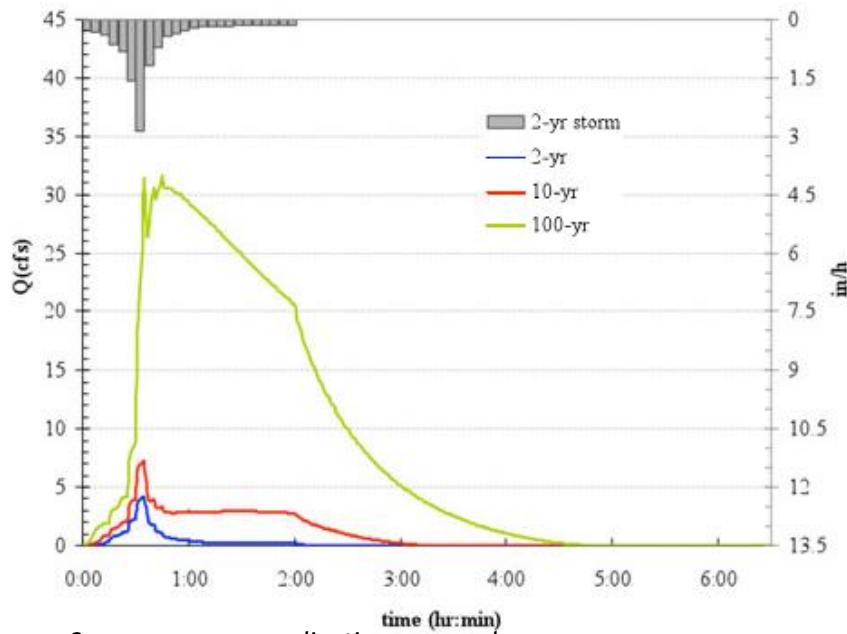

# Modeliranje i SWMM...

## Zašto modelirati, odnosno zašto praviti model (kanalizacione mreže)?

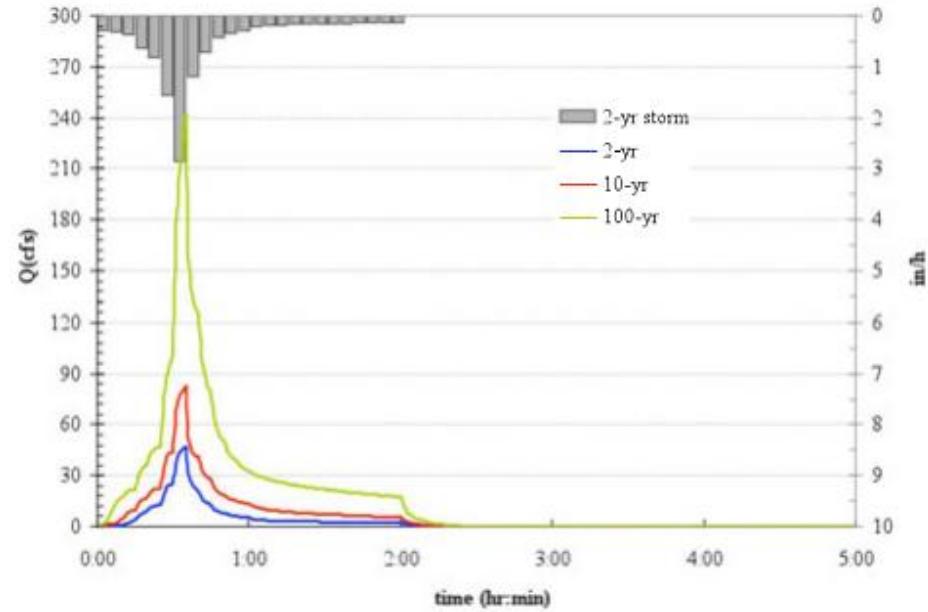

- Analiza stanja i rada postojećeg sistema
- Sagledavanje različitih uticaja na količinu i kvalitet oticaja
- Analiza različitih varijantnih rešenja prilikom projektovanja

Sliv pre urbanizacije

Sources: swmm applications manual

Sliv nakon urbanizacije

# Šema modeliranja u SWMM-u

## Zona atmosfere

Padavine se izlučuju na površinu zemljišta.

## Zona površine zemljišta

Modeliraju se važni hidrološki procesi. (Gubici vode pri padavinama, Površinski oticaj)

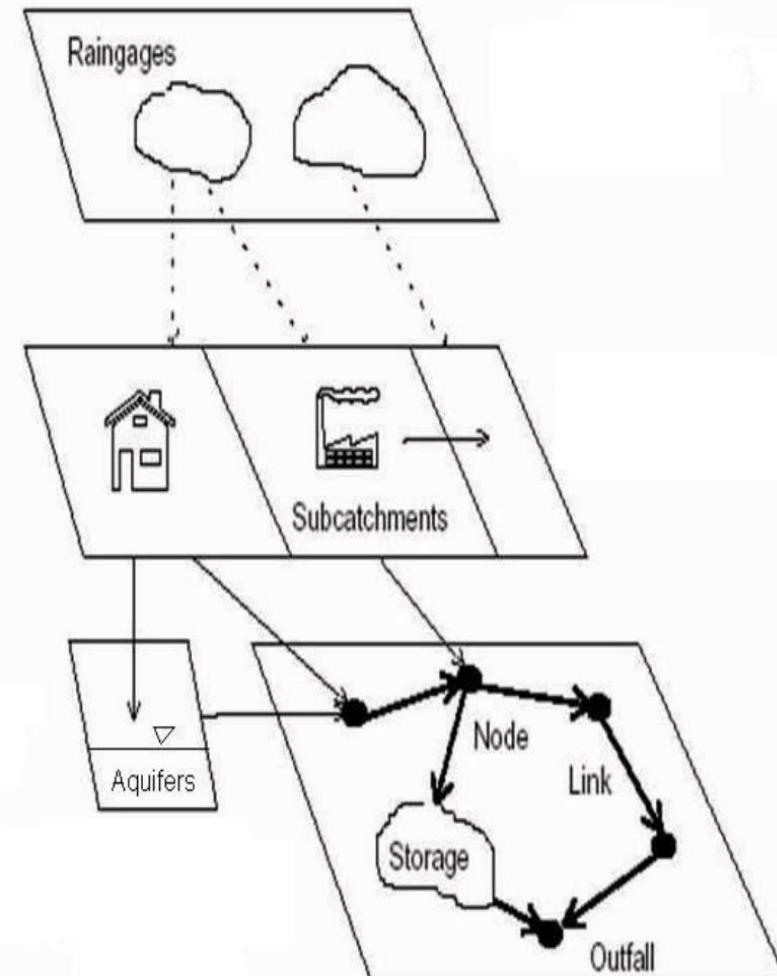

## Zona podzemnih voda

Prima infiltriranu vodu iz zone površine zemljišta.

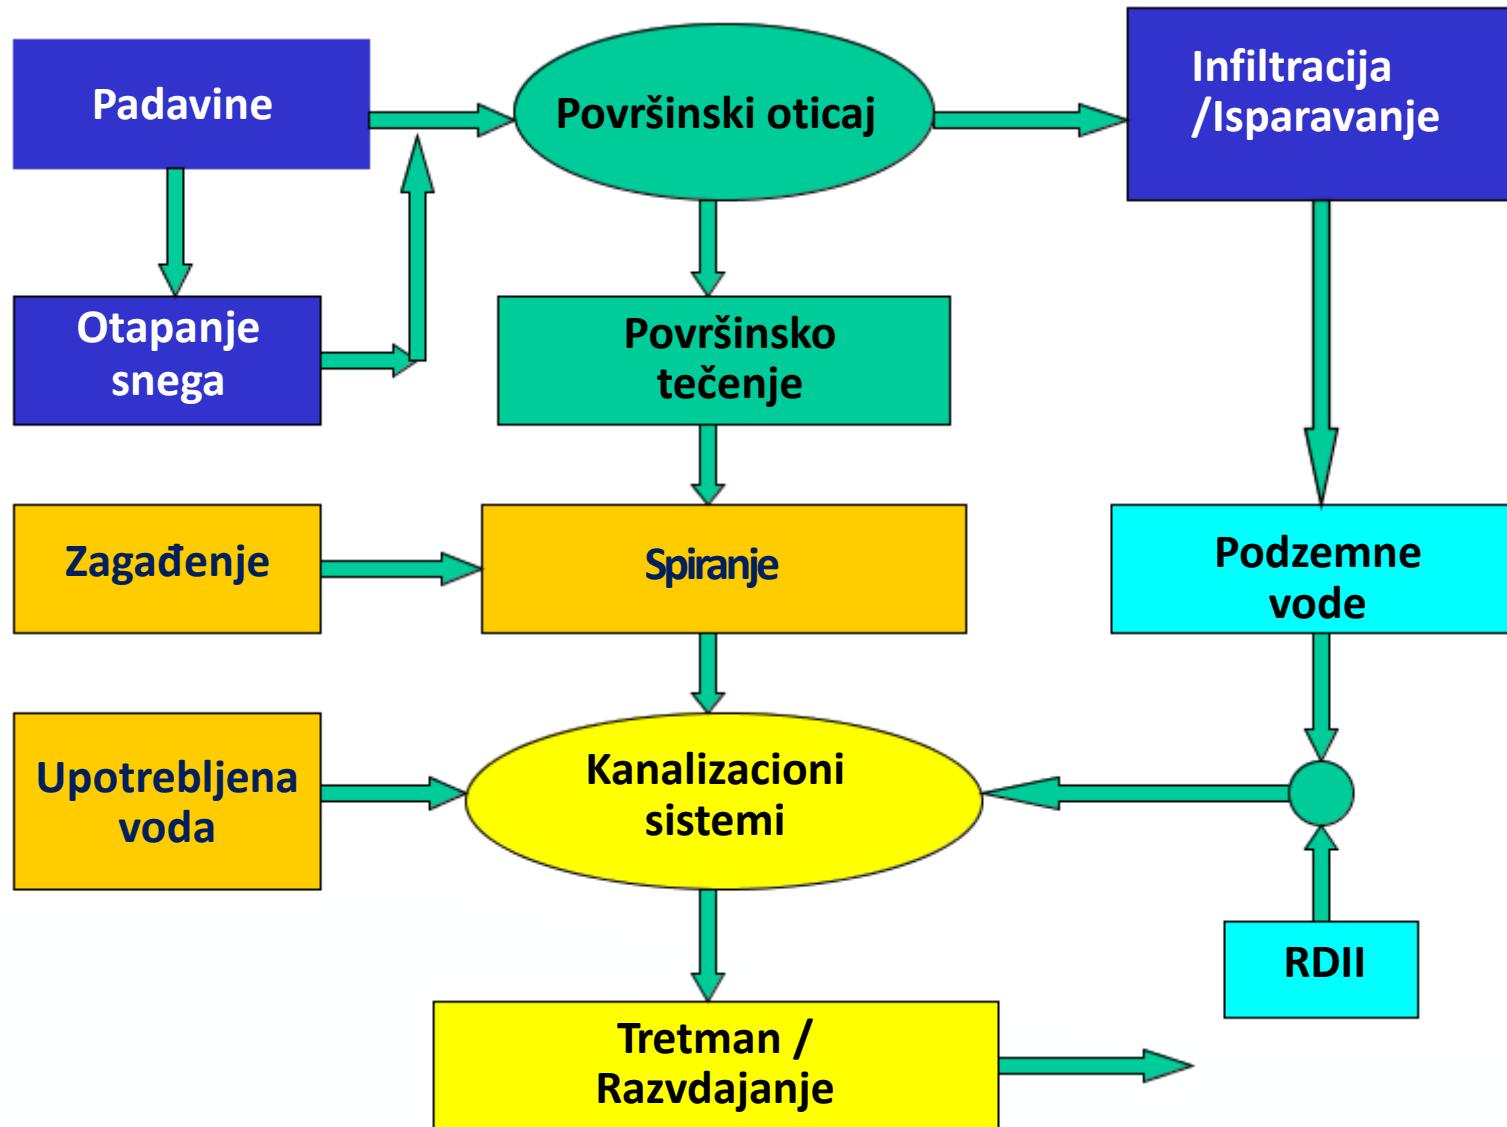

## Zona transporta

Mreža povezanih elemenata: kanala, cevi, šahtova...

Koristi čvorove i mreže u poretku u kome su prikazani u mreži.

# Procesi koji se modeliraju u SWMM-u

## Storm Water Management Model (SWMM)

*Helps predict runoff quantity and quality from drainage systems*

EPA's Stormwater Management Model (SWMM) is used throughout the world for planning, analysis, and design related to stormwater runoff, combined and sanitary sewers, and other drainage systems. It can be used to evaluate gray infrastructure stormwater control strategies, such as pipes and storm drains, and is a useful tool for creating cost-effective green/gray hybrid stormwater control solutions. SWMM was developed to help support local, state, and national stormwater management objectives to reduce runoff through infiltration and retention, and help to reduce discharges that cause impairment of waterbodies.

# EPA SWMM – prednosti

Topic	Item	Model		
		SWMM 5.0	MOUSE / MIKE URBAN	INFOWORKS CS
Hydraulics	Flow Routing	Dynamic Wave	Dynamic Wave	Dynamic Wave
	Routing Engine	Explicit numerical engine can have stability issues if the model not constructed and reviewed carefully.	Implicit numerical engine, a stable and fast hydraulic engine. Though it is considered to be a slightly slower engine than InfoWorks.	Implicit numerical engine. Generally considered the fastest and most stable fully dynamic engine.
	Inlet Control	No	No	Yes
	Detention Storage	Yes	Yes	Yes
	RTC	Yes	Yes	Yes
	Pumps	Yes	Yes	Yes
Hydrology	Irregular XS	Yes	Yes	Yes
	Surface Runoff	Utilizes a non-linear reservoir model to simulate runoff.	Provides a number of surface runoff models, such as a time area method and a Kinematic wave model (Non Linear Reservoir Model). This model behaves exactly the same as the SWMM non-linear reservoir model.	Provides a number of surface runoff models, including the SWMM non-linear reservoir model.
	Infiltration	Provides three infiltration options, Curve Number, Horton's Equation and Green Ampt.	In addition to the RDII model (see below) MOUSE utilizes the Horton's Equation or SCS Curve Number to simulate infiltration.	Fixed PR Model (simple percentage) Green Ampt Model Horton Infiltration Model New UK PR Model Wallingford Procedure Model Constant Infiltration Model US SCS Model
	RDII	Provides either unit hydrographs to simulate RDII or a groundwater infiltration module to simulate the influence of groundwater table on infiltration flow.	MOUSE employs a complex RDII model.	Provides either unit hydrographs to simulate RDII or a groundwater infiltration module to simulate the influence of groundwater table on infiltration flow. As per SWMM.
Water Quality	Continuous Simulation	Yes	Yes	Yes
	Pollutant Build Up / Washoff	Yes	Yes	Yes
	Pollutants Modeled	Yes	Yes	Yes
Miscellaneous	Treatment	Yes	Yes	Yes
	LTS - Job List	No	Yes - MOUSE provides a job list file which allows a selected number of events to be run by the HD model.	No
	Statistics	Yes	Yes	Yes
Use Ability	User Interface	Basic user interface.	Good user interface.	Sophisticated user interface.
	Data Management	None	Reasonable data management with the scenario manager.	Excellent data management.
	Result Display	Reasonable	Good	Excellent
	Support	No formal support, A SWMM Users List server, allows subscribers to ask questions and exchange information.	Comprehensive	Comprehensive
Price	Purchase Cost	Free	~\$15k to \$40k dependant on pipe limitation and modules selected.	~\$30k to \$60k dependant on node limitation selected.
	Maintenance Cost	Free	~10% of the purchase price	~15% of the purchase price

# EPA SWMM – ograničenja

---

- To je hidrološko-hidraulički alat za analizu, a ne za automatsko projektovanje
- Nema direktnog povezivanja sa **GIS**-om
- Nema transporta sedimenata, ni prostiranja erozije
- Nema proračuna kretanja zagađivača u vodotocima (influentima), niti u podzemnim vodama

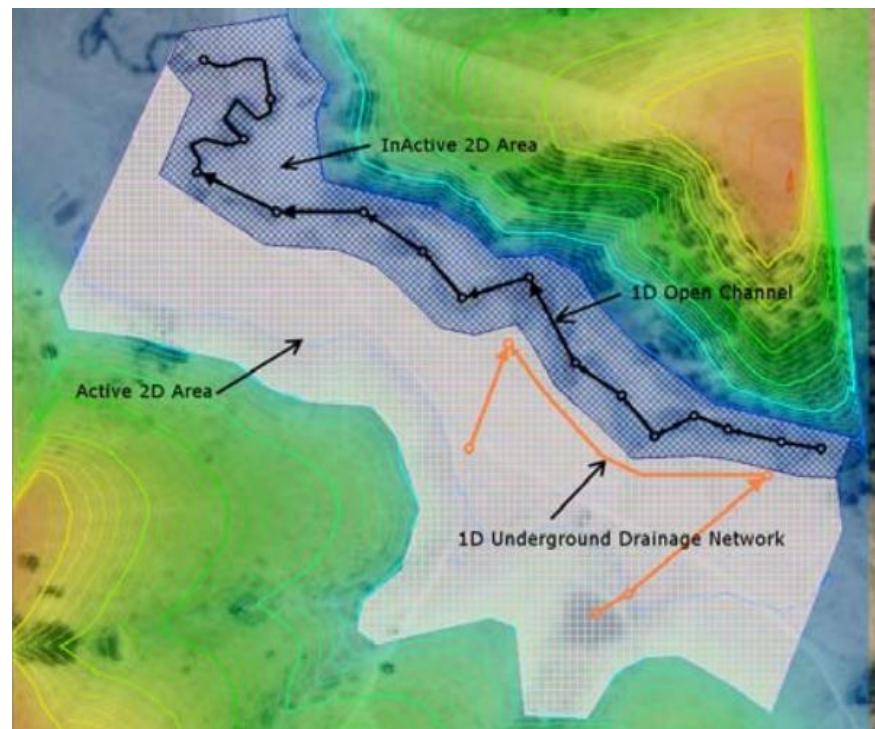

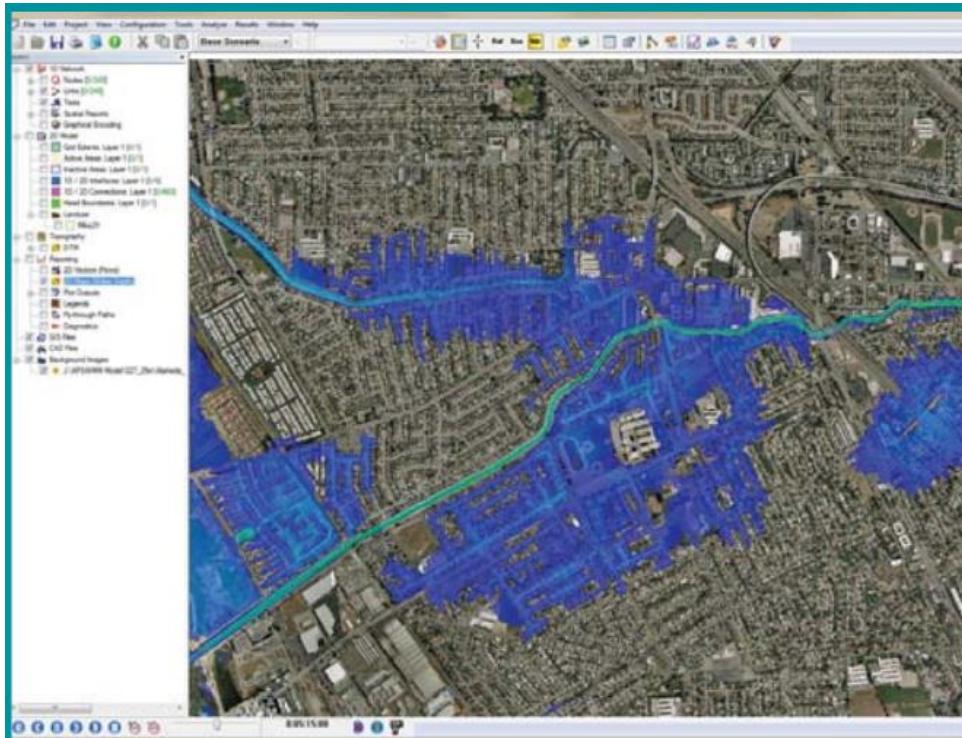

## SWMM wrapers

INFO: solution summary.

The screenshot shows the ArcGIS Subcatchment Tools interface. On the left, there's a map of a watershed area divided into subcatchments, each represented by a different color and pattern. A blue line indicates a flow path or stream network. The right side of the screen displays a 'Subcatchment Tools' dialog box with various options for managing subcatchments, such as 'Create Flow Direction', 'Identify Sink', 'Fill Sink', 'Create Flow Accumulation', 'Create Watershed', and 'Create Flow Stream'. Below the map, there's a detailed 'Subcatchment' properties table for a specific subcatchment labeled 'SUB-98'.
