

# Računarske mreže i komunikacije

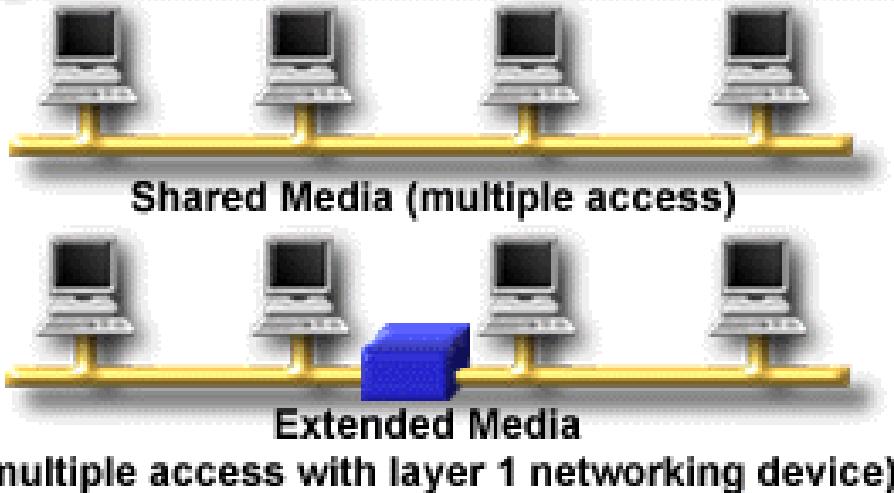

(laboratorijske vježbe)

# III Laboratorijska vježba

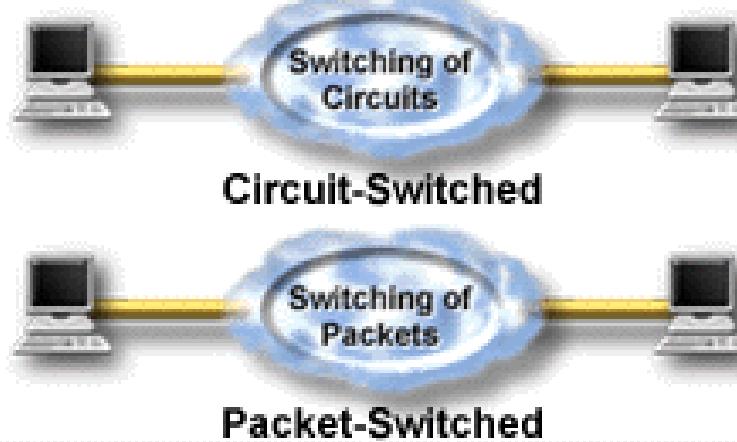

- Povezivanje računara u računarsku mrežu
- UTP kablovi

# Types of Networks

## Directly Connected

## Indirectly Connected

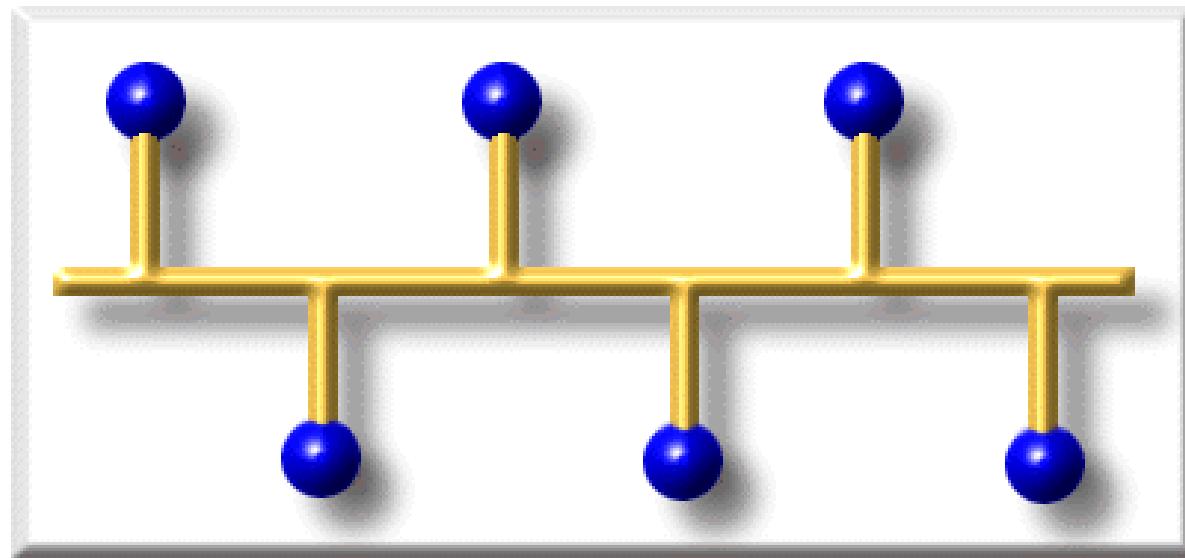

# Mrežne topologije

- Fizička topologija
  - stvarni fizički raspored kablova i uređaja
- Logička topologija
  - način na koji je ostvaren pristup medijumu za prenos podataka

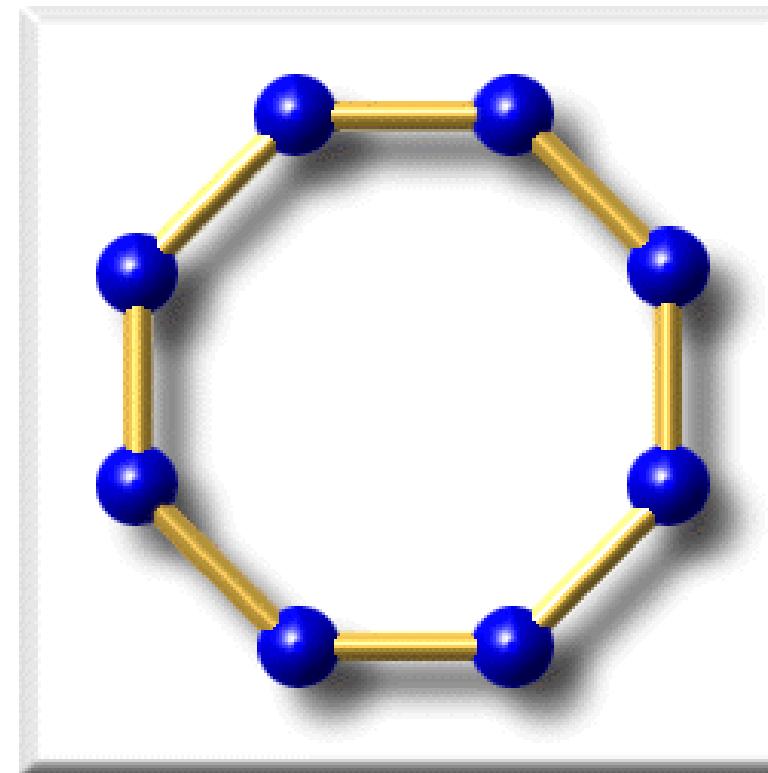

# Fizičke topologije

- Bus
- Prsten i dvostruki prsten (Dual Ring)
- Star - topologija zvijezde
- Extended star - proširena zvijezda
- Hjerarhijska topologija
- Mesh
- Neregularna topologija
- Ćelijska topologija

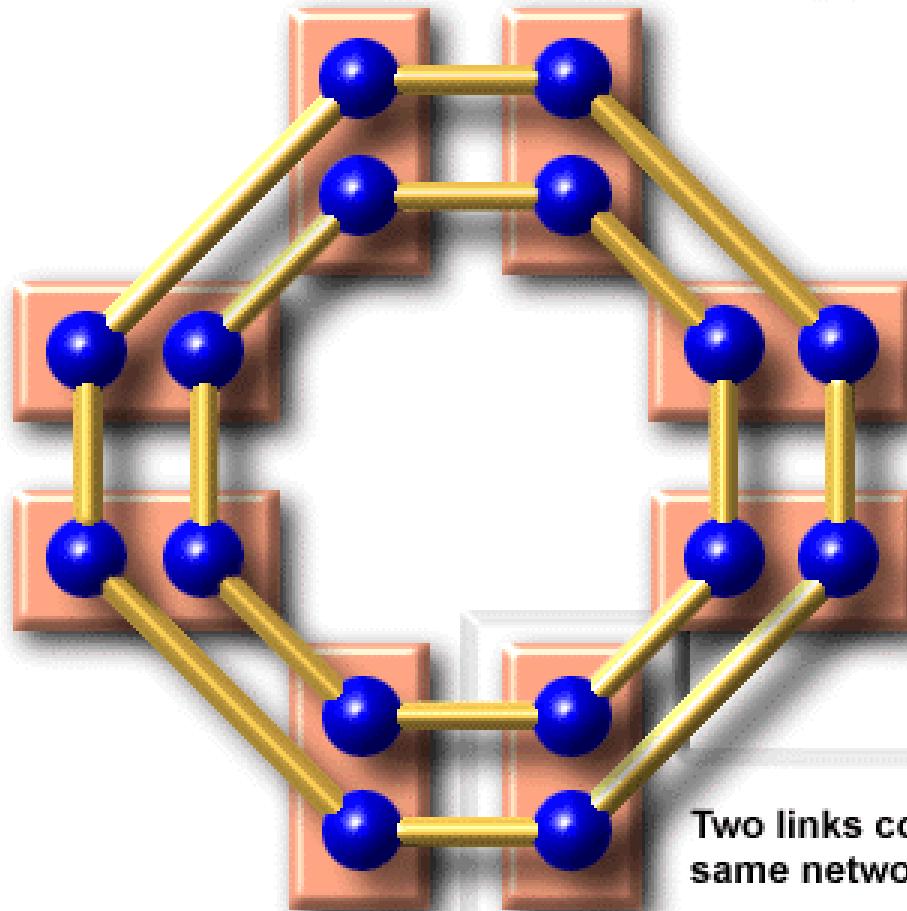

# Bus Topology

# **Ring Topology**

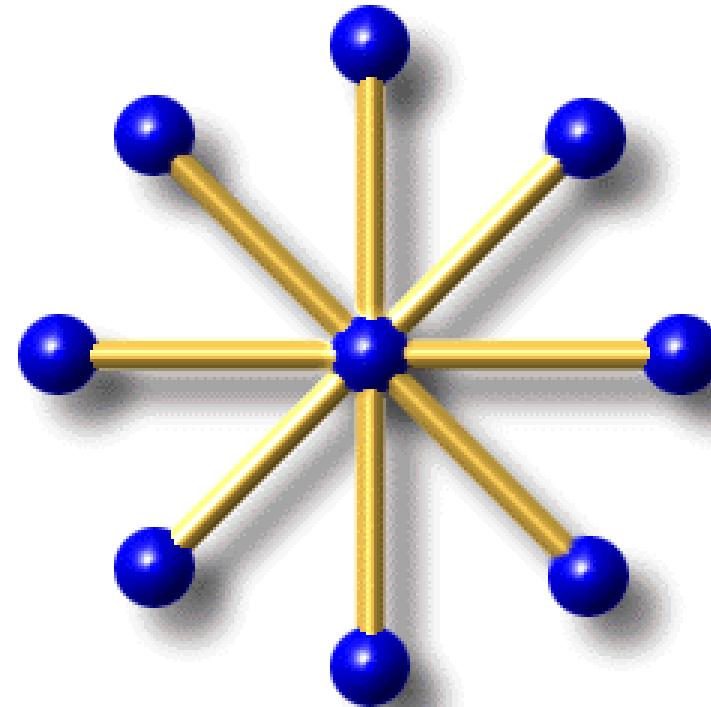

# Dual Ring Topology

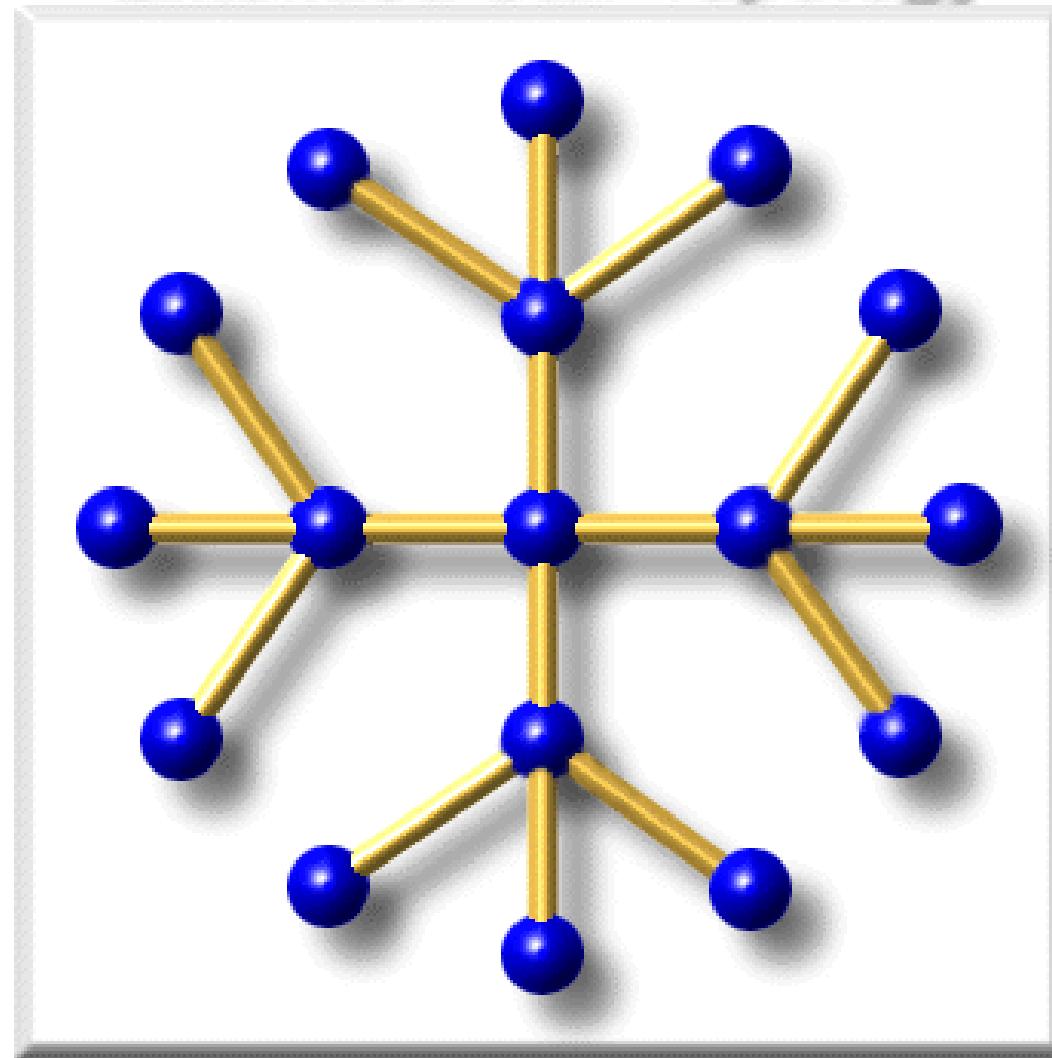

Two links connected to the  
same networking device

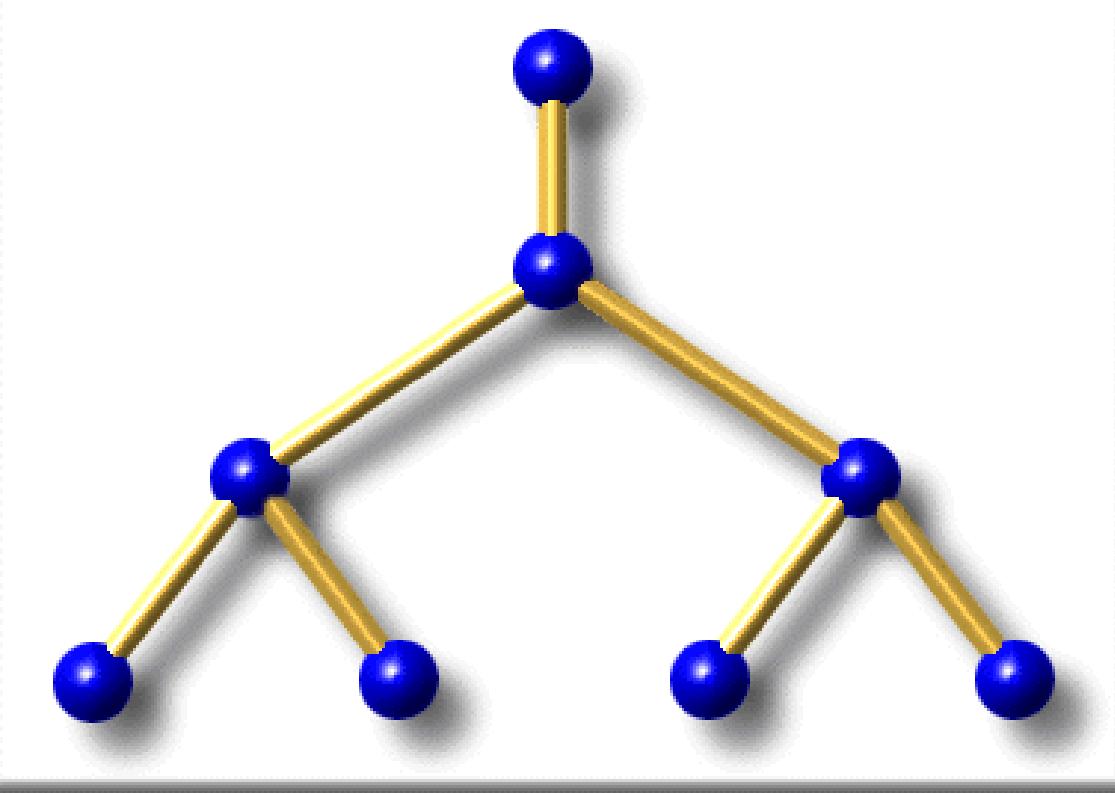

# Star Topology

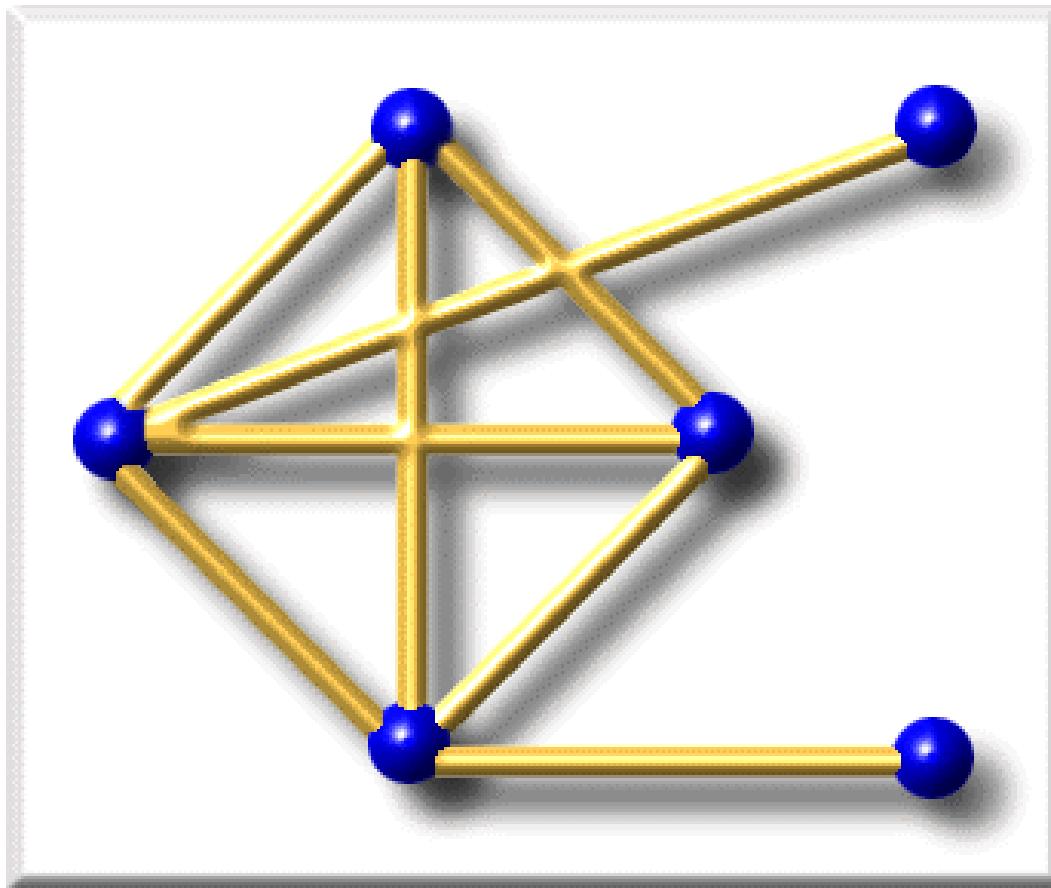

# Extended Star Topology

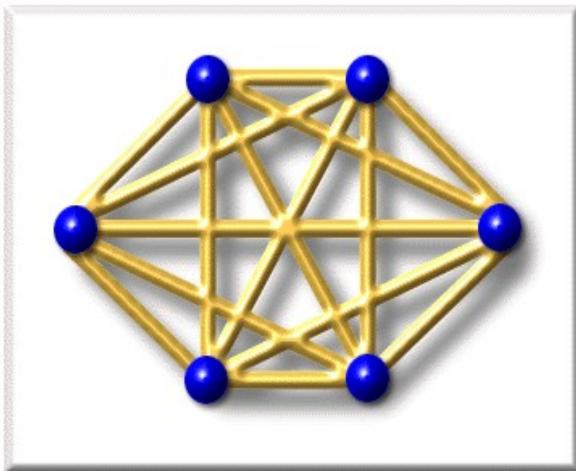

# Tree Topology

# Irregular Topology

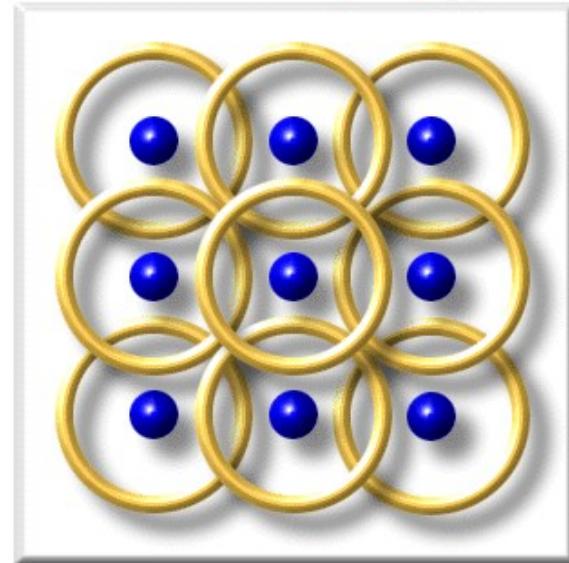

**Complete (Mesh) Topology**

© Cisco Systems, Inc. 1999

$$n(n-1)/2$$

**Cellular Topology**

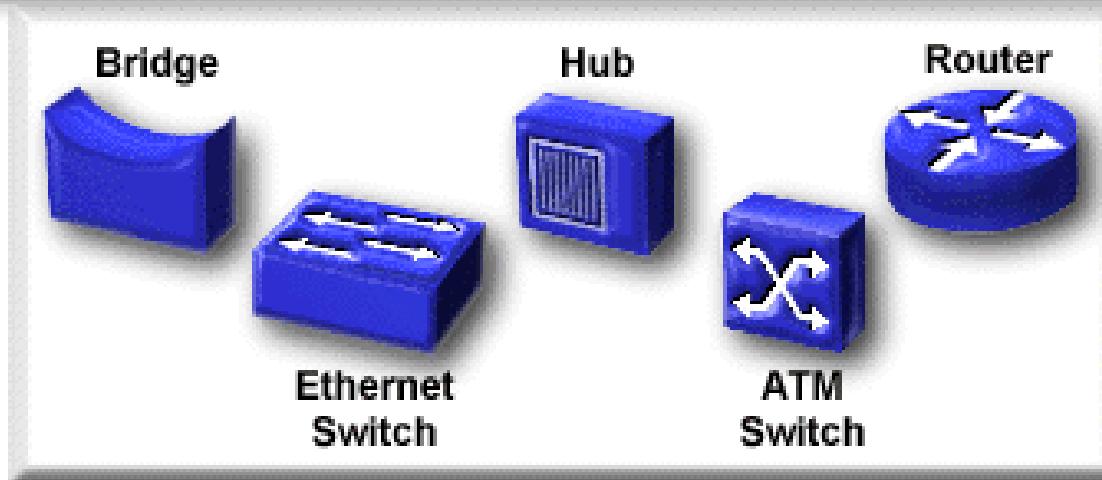

© Cisco Systems, Inc. 1999

# Logičke topologije

- Broadcast
  - svaki host šalje svoje podatke svim ostalim hostovima na mrežnom medijumu (Ethenet tehnologija)
- Token passing
  - samo računar koji je posjedu token-a, može da šalje podatke (Token Ring, FDDI )

# Local Area Networks and Devices

- Operate within a limited geographic area
- Allow multiaccess to high-bandwidth media
- Control the network privately under local administration
- Provide full-time connectivity to local services
- Connect physically adjacent devices

# LAN

- Sastoji se od sledećih komponenti:
  - Računari
  - NIC
  - Periferijski uređaji (printeri, sl.)
  - Mrežni medijumi za prenos podataka
  - Mrežni uređaji
- LAN Tehnologije
  - Ethernet
  - Token Ring
  - FDDI

# Povezivanje računara

- Pomoću mrežnih kablova

- Koaksijalni kablovi
- UTP
- STP
- Optički kablovi

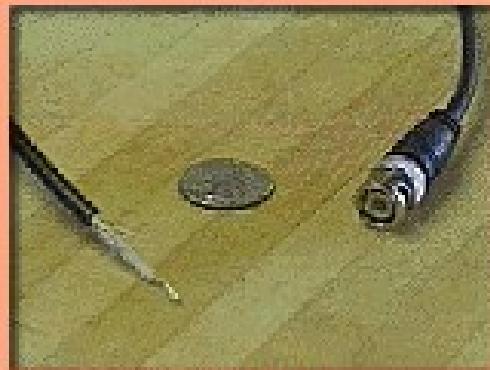

- Direktno povezivanje

- serijski port
- paralelni port
- USB
- Modem

- Bežična veza

- Wireless (RF)
- Infrared

## Various Types of Network Media

Coaxial

Fiber Optic

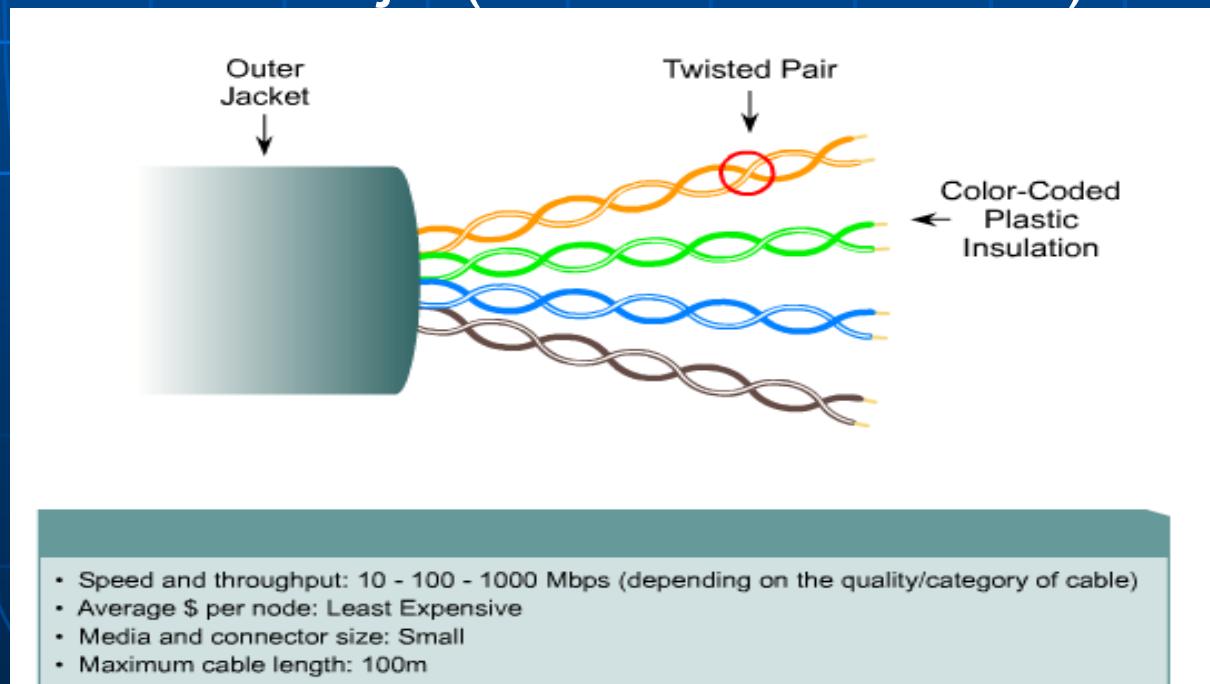

Unshielded Twisted Pair

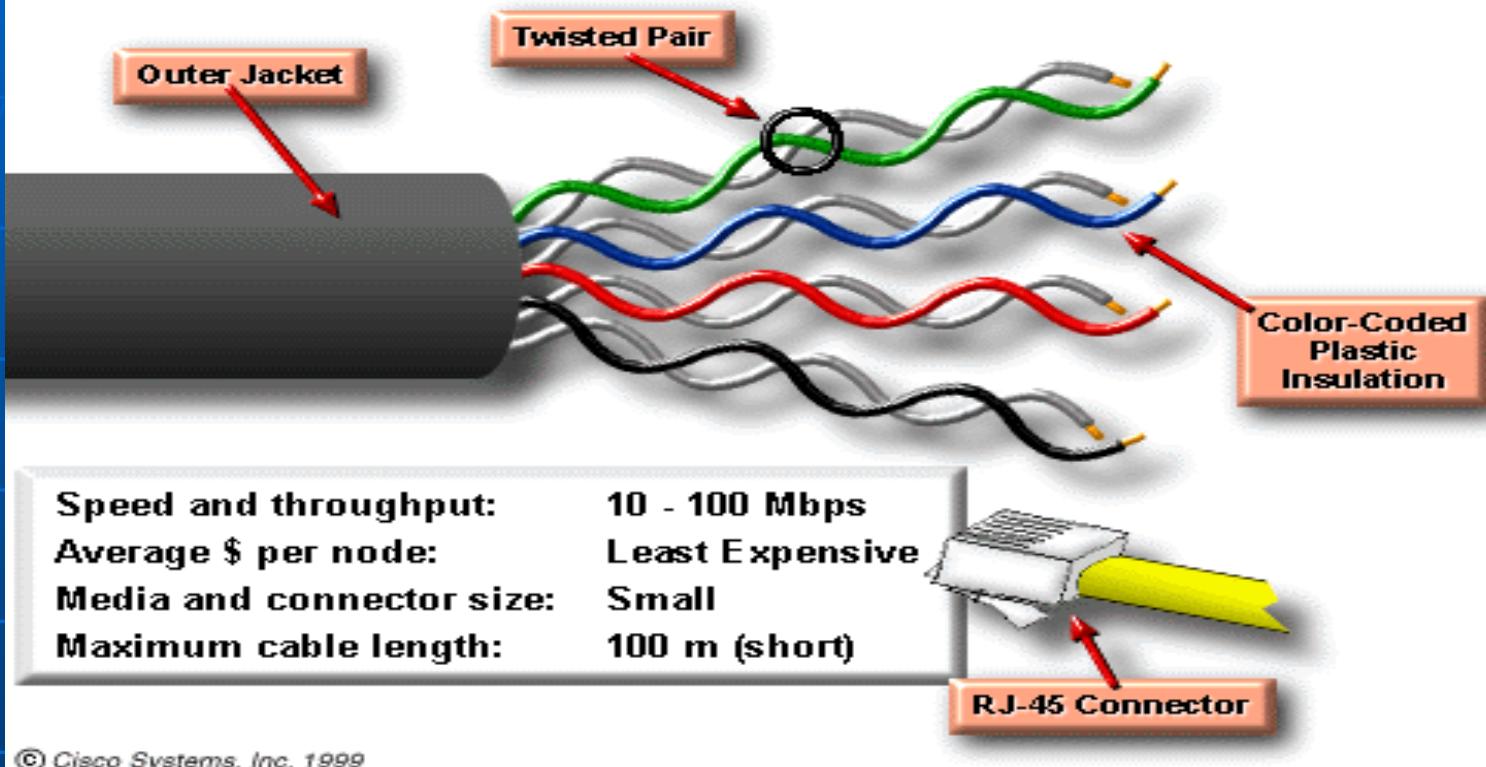

Various types of  
network media.

# UTP kablovi

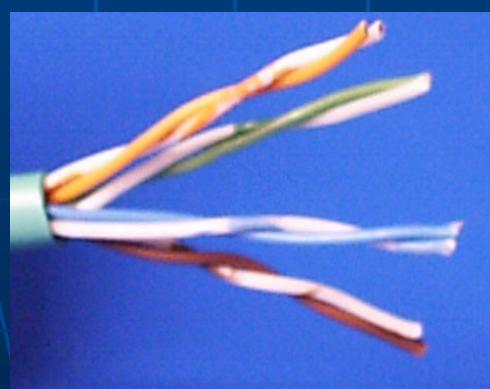

- Unshielded Twisted Pair - UTP
- Svaki par žica prepoznatljiv po boji (zelena, narandžasta, plava, braon)
- Parovi žica su upredeni (twisted) da bi se umanjile međusobne smetnje (cancelation effect)

# Unshielded Twisted Pair (UTP)

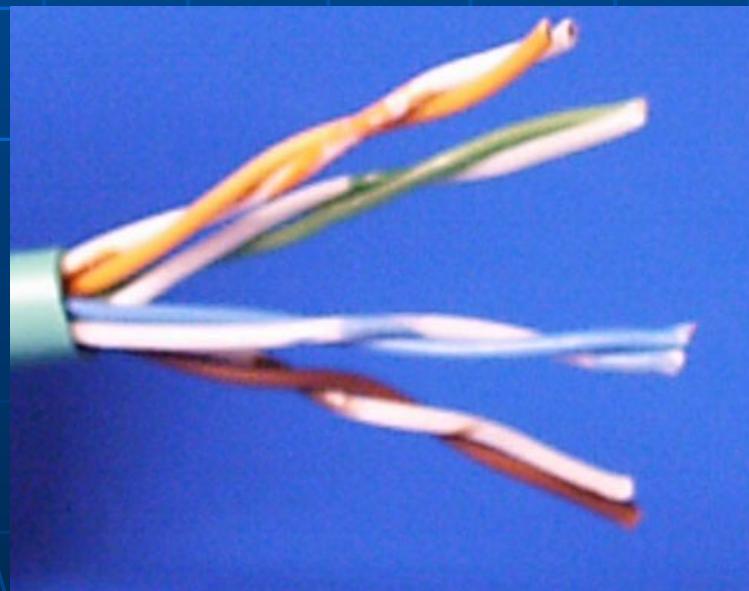

© Cisco Systems, Inc. 1999

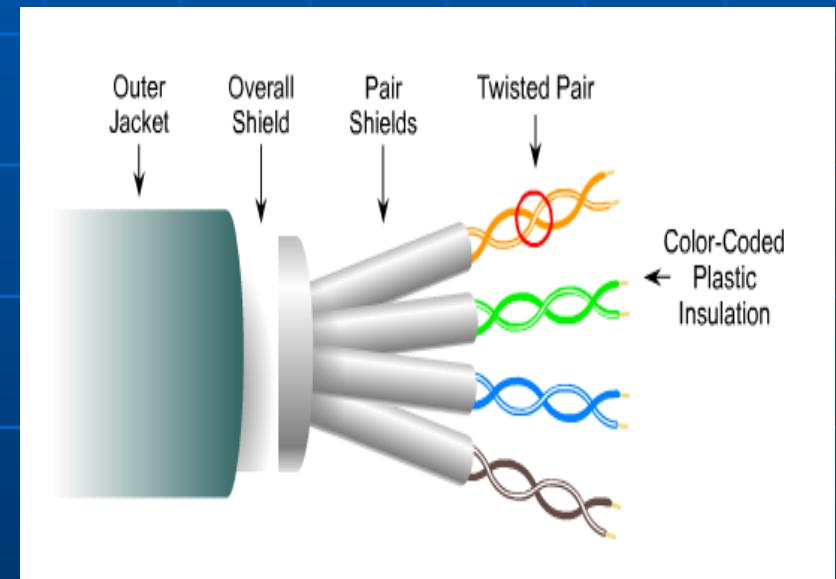

# UTP - Prednosti i mane

- Jeftini i jednostavni za ugradnju
- Malih dimenzija - debljina
- Osjetljivi su na uticaj elektronskog šuma (EMI i RFI)

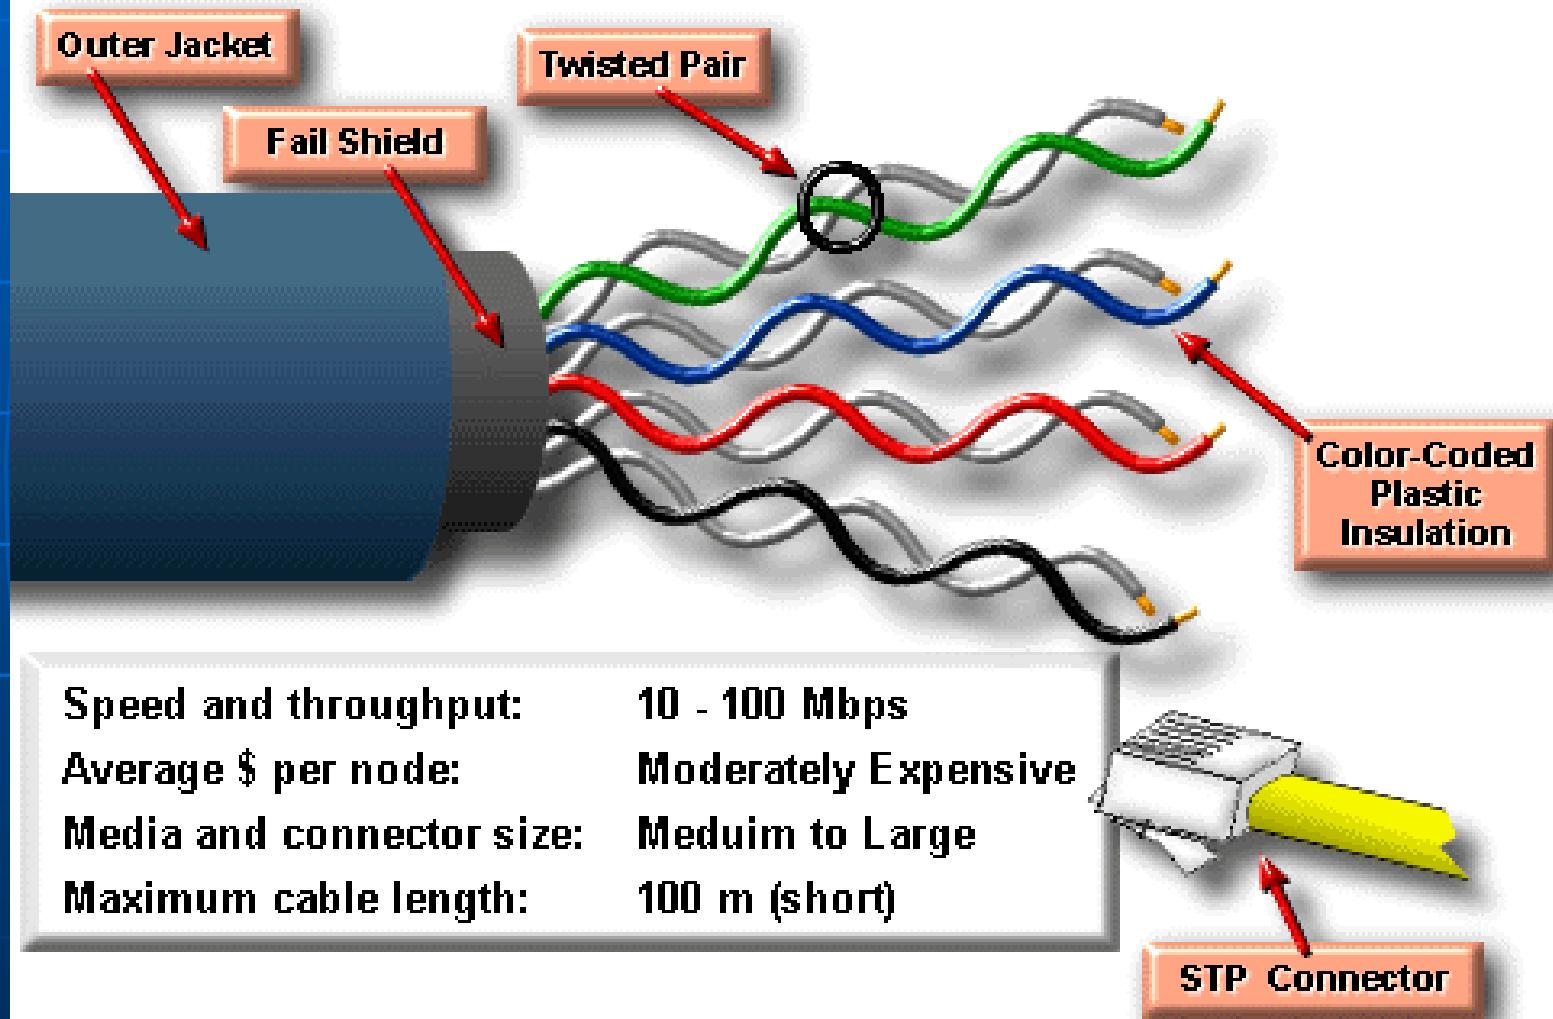

# STP - Shielded Twisted Pair

- Svaki par žica je u metalnoj foliji
- Četiri para žica su u metalnoj pletenici ili foliji
- Umanjen uticaj elektronskog šuma (EMI i RFI)
- Skuplji i komplikovaniji za ugradnju od UTP

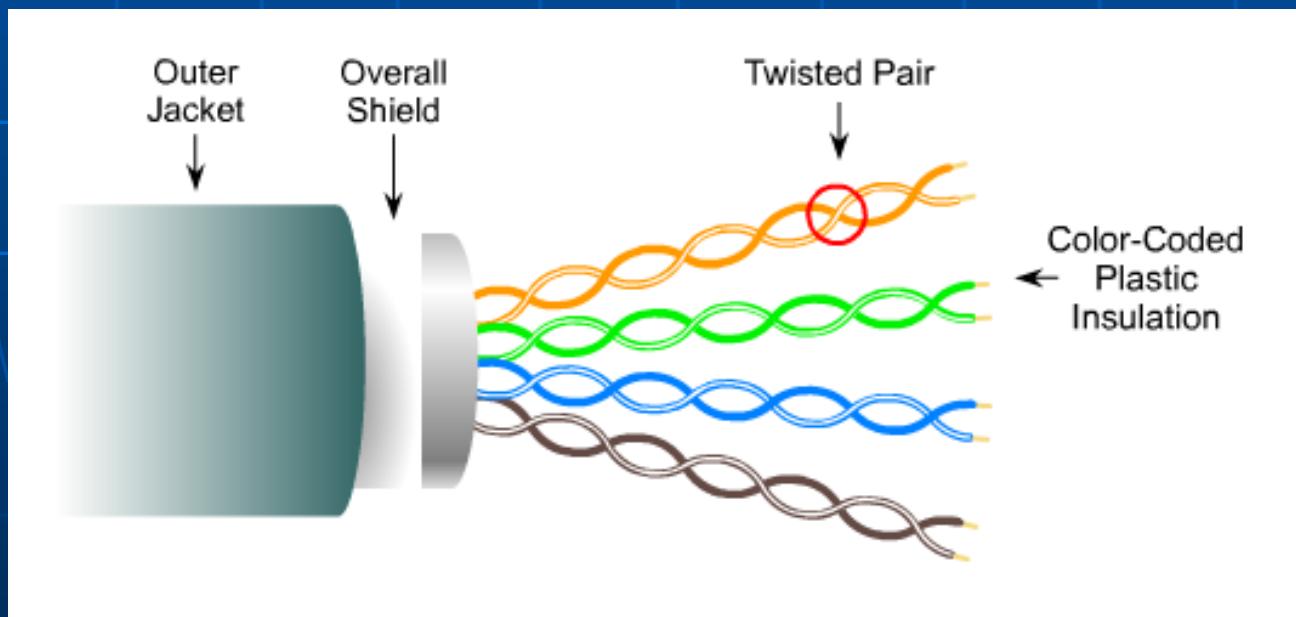

# Shielded Twisted Pair (STP)

# ScTP ili FTP kablovi

- Foil Twisted Pair
- Isto što i UTP kabal ali sa dodatkom metalne folije (shield or screen)

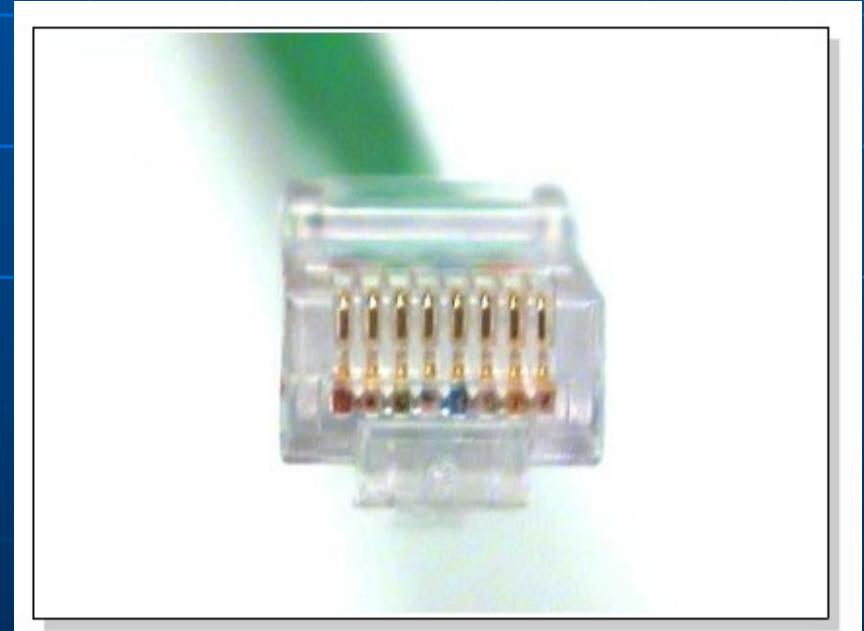

# Metalni šild

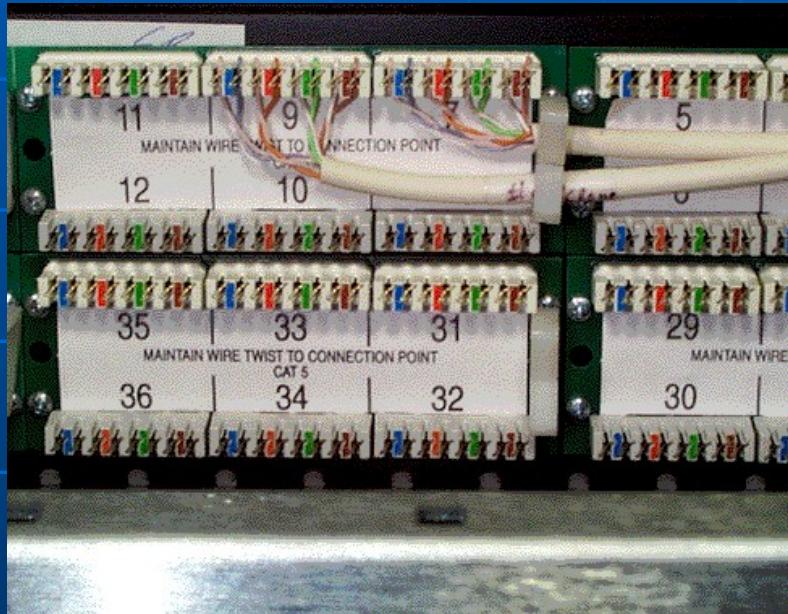

- Kod STP i ScTP (FTP) kablova, zaštitni metalni omot (shield) mora biti uzemljen
- Bez pravilnog uzemljenja shield-a, kabl je podložan uticajima EMI i FRI

# RJ - 45 konektor

- UTP i STP (ScTP, FTP) kablovi koriste RJ-45 konektor

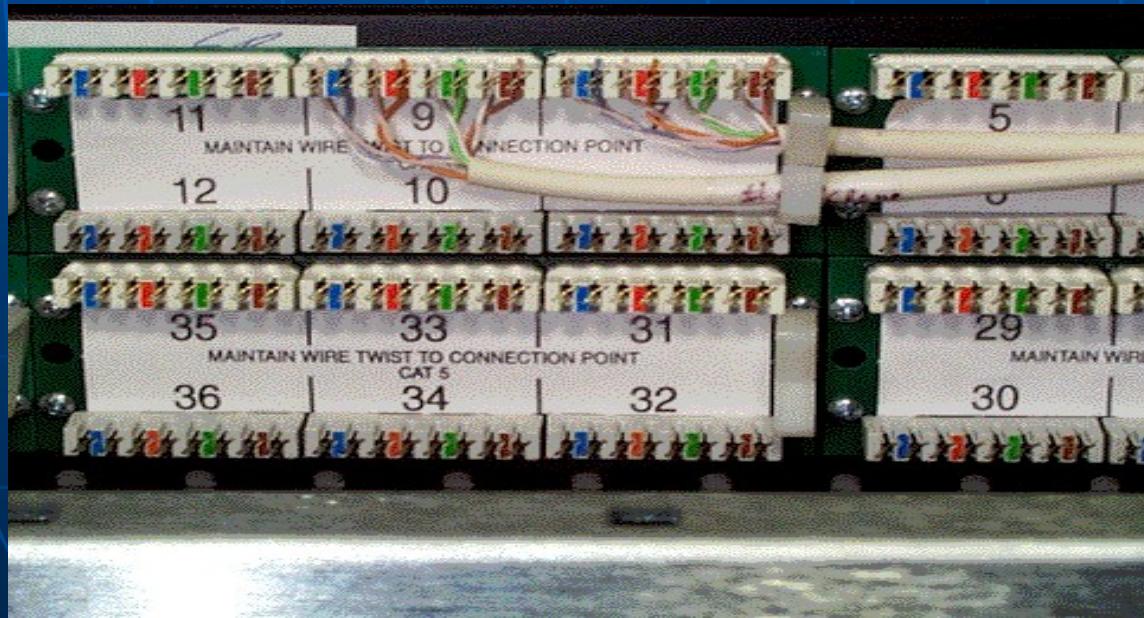

# Utičnice (RJ-45 jack) i Patch panel (UTP i STP)

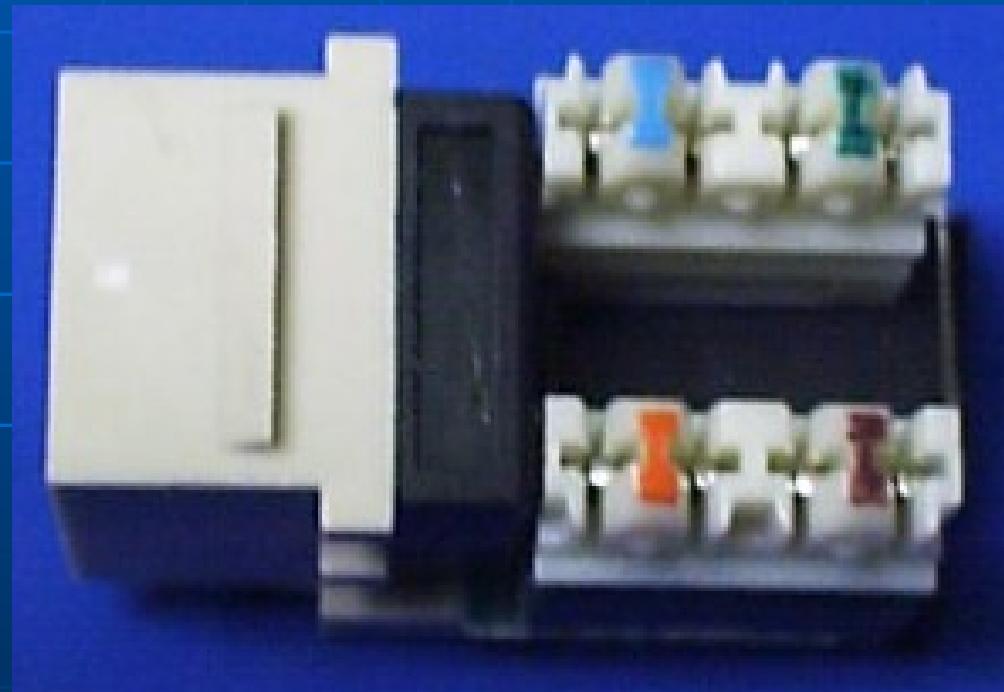

- Wall kabal - utičnice, patch panel
- Fly (patch) kabal - konektor RJ-45

# Fly i Wall

- Wall kabal - ugradnja u zid ili plastične kanale
- Fly kabal (patch)
  - Od mrežne utičnice do računara
  - Od Patch panela do mrežnog uređaja

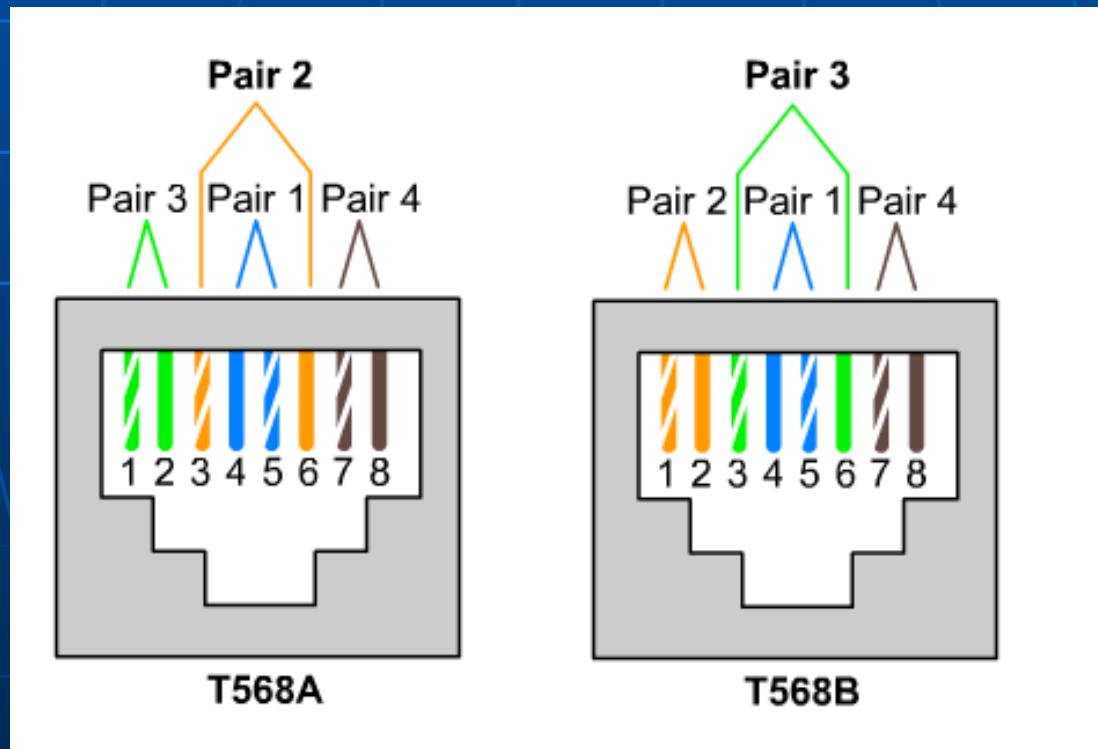

# RJ-45 jack

# Standardi kabliranja

- TIA/EIA-568-B (T568A, standard A)
- TIA/EIA-568-A (T568B, standard B)

# Direktni kabl - straight-through

- Na oba konektora je isti raspored žica

Pin Label

Pin 7	- - - - -	Pin 7
Pin 8	- - - - -	Pin 8

# Direktni kabl - straight-through

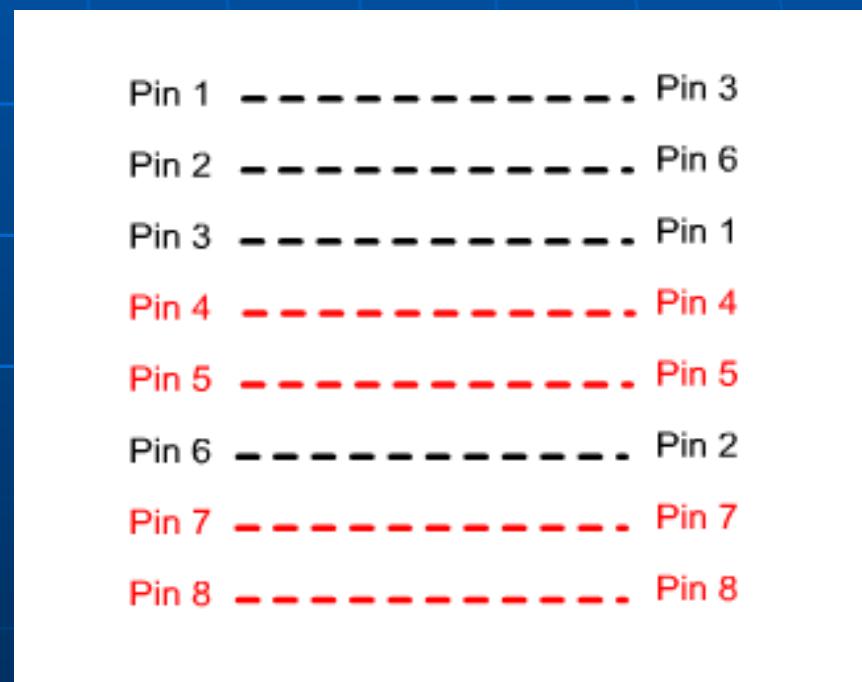

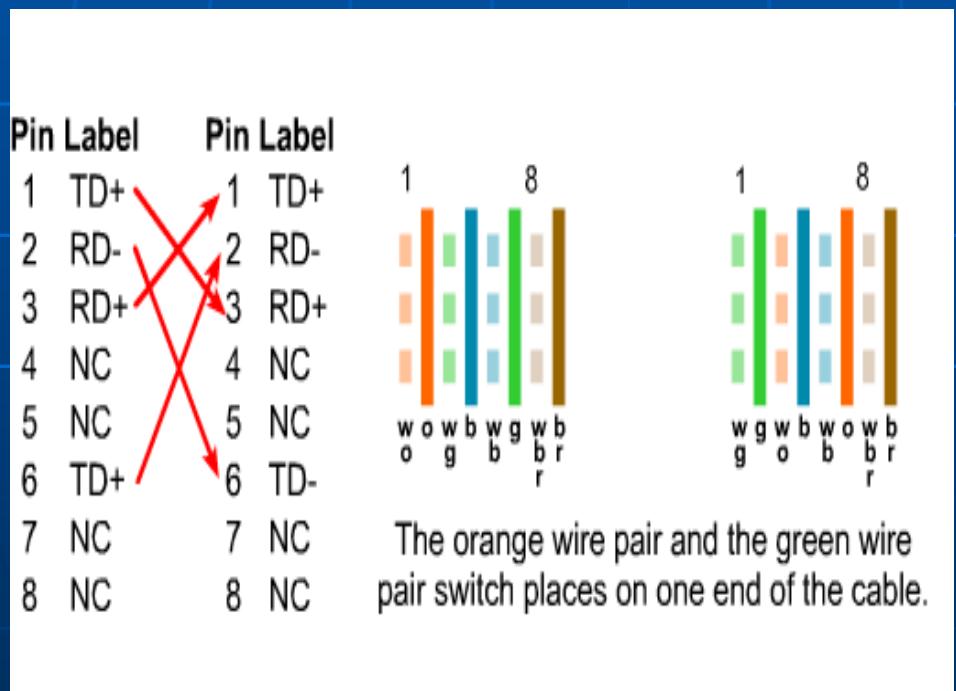

- Na oba konektora je isti raspored žica

- Switch - ruter
- Switch - PC (server)
- Hub - PC (server)

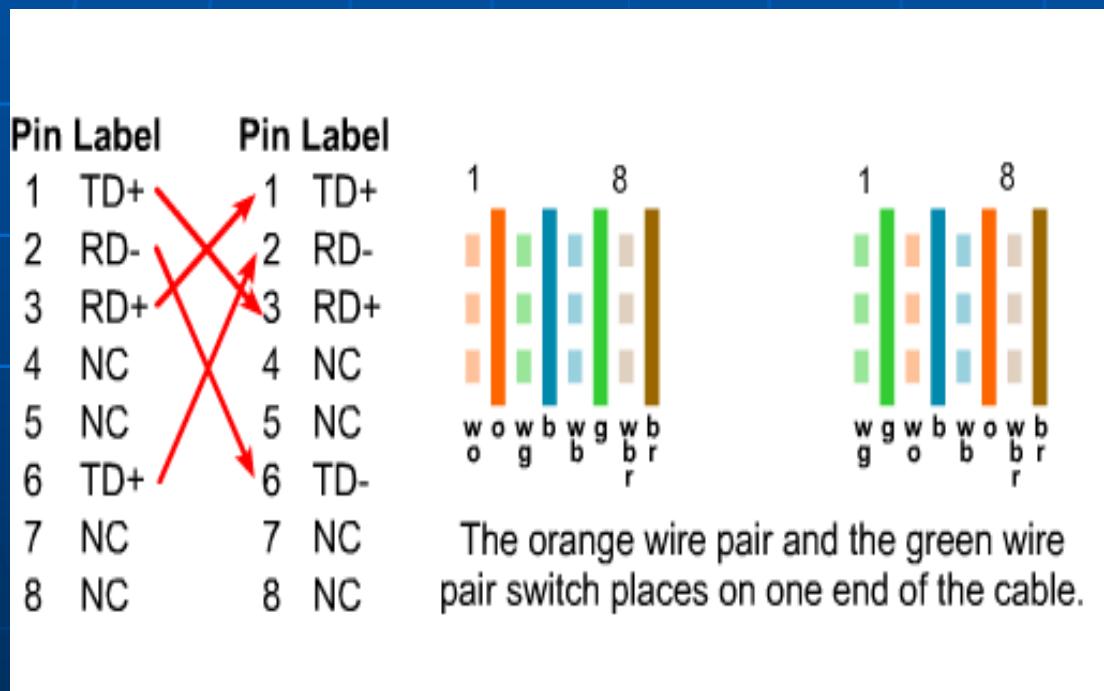

# Ukršteni kabl - crossover

- Na konektorima je različit raspored žica (zeleni i narandžasti par žica mijenja svoje pozicije)

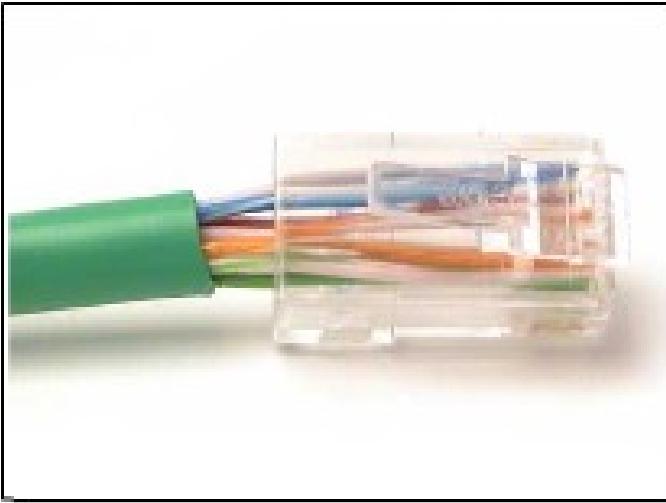

# Ukršteni kabl - crossover

- Na konektorima je različit raspored žica (zeleni i narandžasti par žica mijenja svoje pozicije)

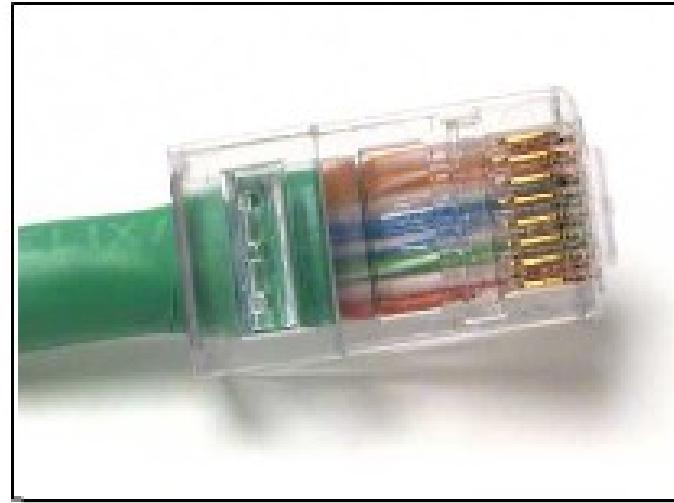

- Switch to switch
- Switch to hub
- Hub to hub
- Router to router
- PC to PC
- Router to PC
- MDI (PC), MDI/X

# Nepravilno i pravino povezan konektor

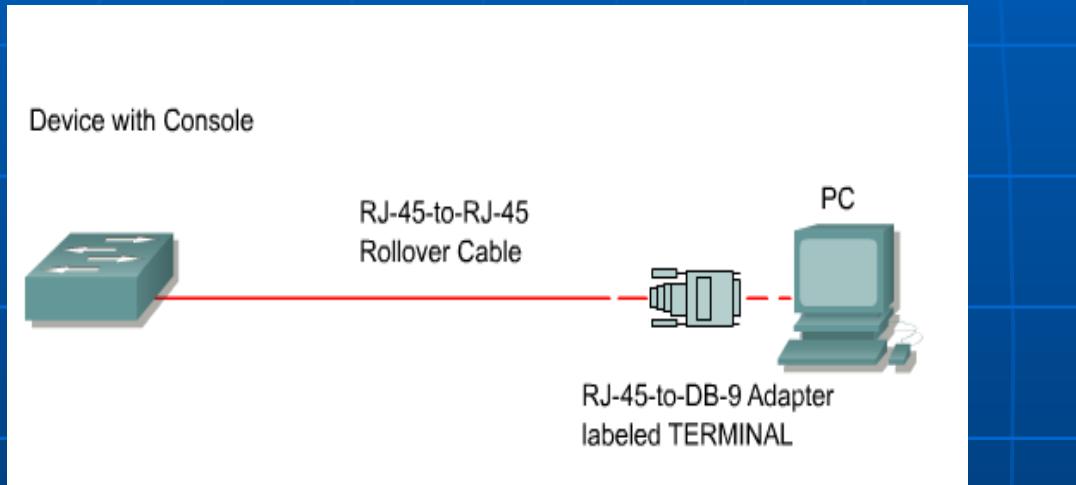

Bad Connector - Wires are  
untwisted for too great a length.

Good Connector - Wires are  
untwisted to the extent  
necessary to attach the  
connector.

Povezivanje RJ-45/com port (serijski port) adaptera računara na konzolni port rutera ili switch-a

# UTP - Povezivanje mrežnih uređaja

- Switch to router
- Switch to PC or server
- Hub to PC or server
- Switch to switch
- Switch to hub
- Hub to hub
- Router to router
- PC to PC
- Router to PC

# Coaxial Cable

**Speed and throughput:**

10 - 100Mbps

**Average \$ per node:**

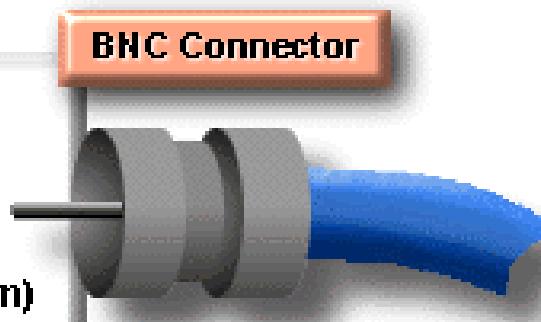

Inexpensive

**Media and connector size:**

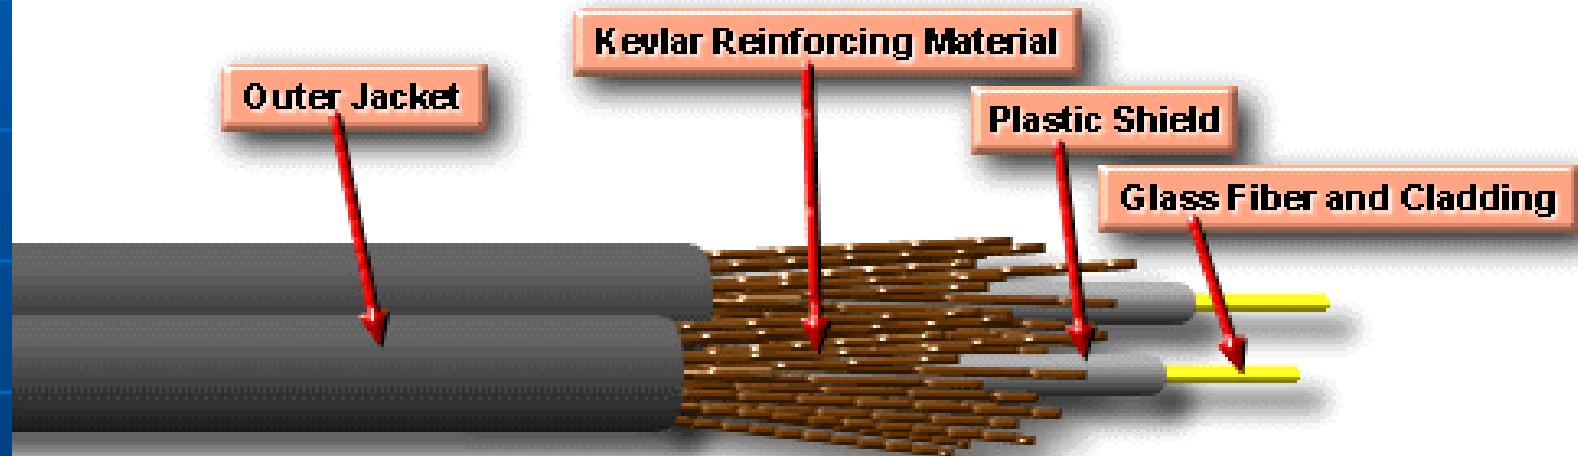

Medium

**Maximum cable length:**

500 m (medium)

# Fiber Optic Cable

**Speed and throughput:**

**100+ Mbps**

**Average \$ per node:**

**Most Expensive**

**Media and connector size:**

**Small**

**Maximum cable length:**

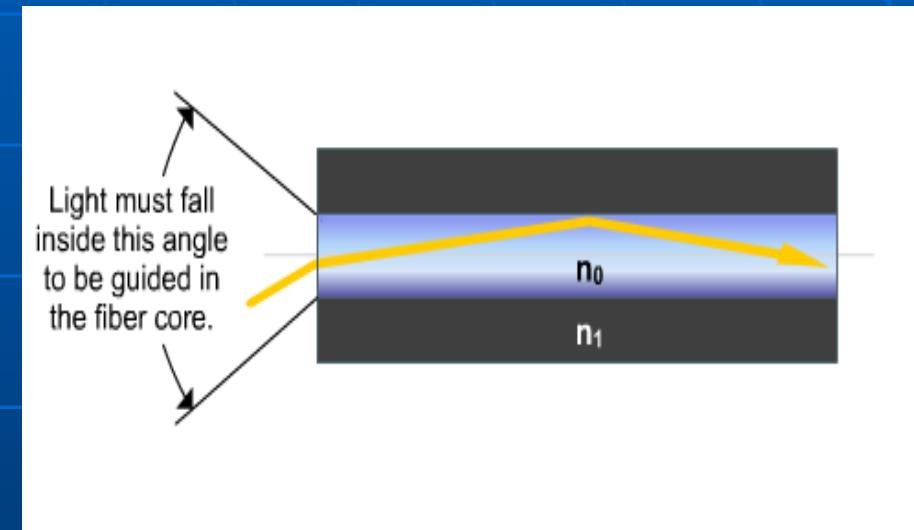

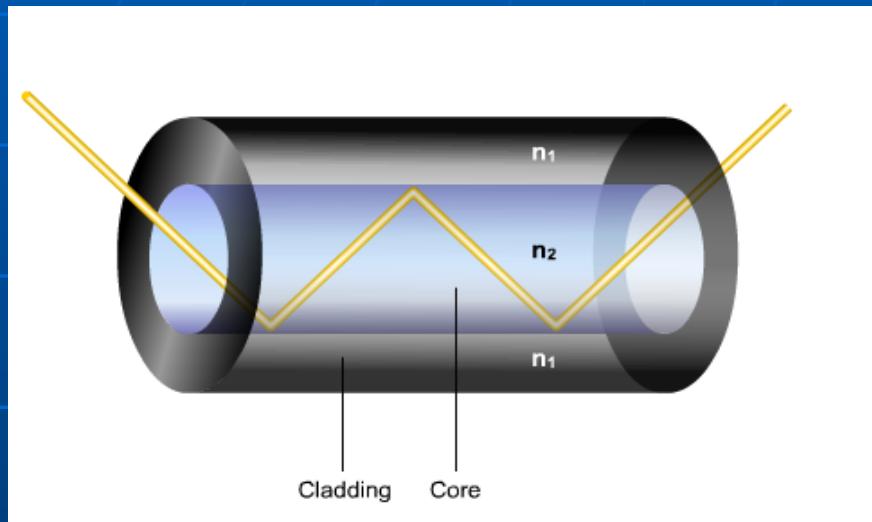

**up to 2 Km**

**Single mode:** One stream of laser-generated light

**Multimode:** Multiple streams of LED-generated light

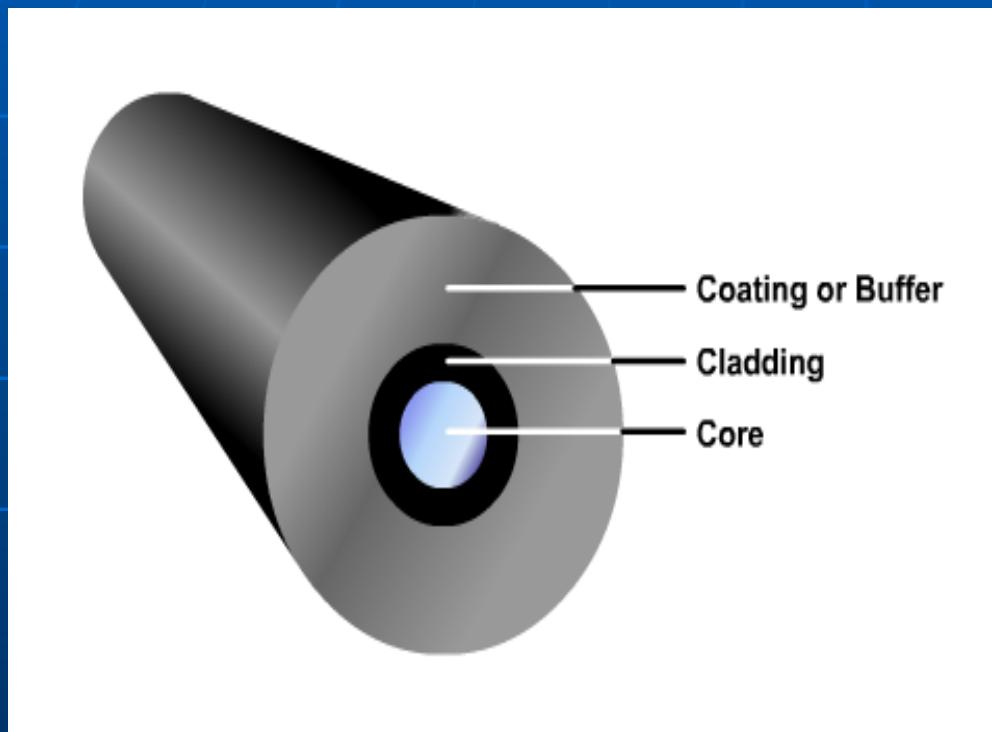

# Refleksija optičkog zraka

- Jezgro optičkog vlakna mora imati veći indeks refrakcije ( $n$ ) od kladinga
- Ugao pod kojim ulazi svjetlosni zrak (ugao incidencije)

# Komponente optičkog kabla

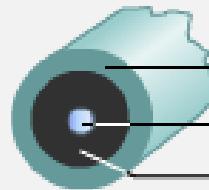

- Omotač (coating)
- Klading
- Jezgro (core)

# Single-mode i Multimod

## Single-mode

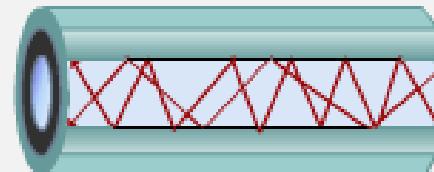

Requires very straight path

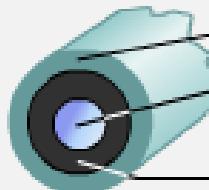

- Polymeric Coating
- Glass Core = 5-8 microns
- Glass Cladding 125 microns dia.

- Small core
- Less dispersion
- Suited for long distance applications (up to ~3km, 9,840 ft)
- Uses lasers as the light source often within campus backbones for distances of several thousand meters

## Multimode

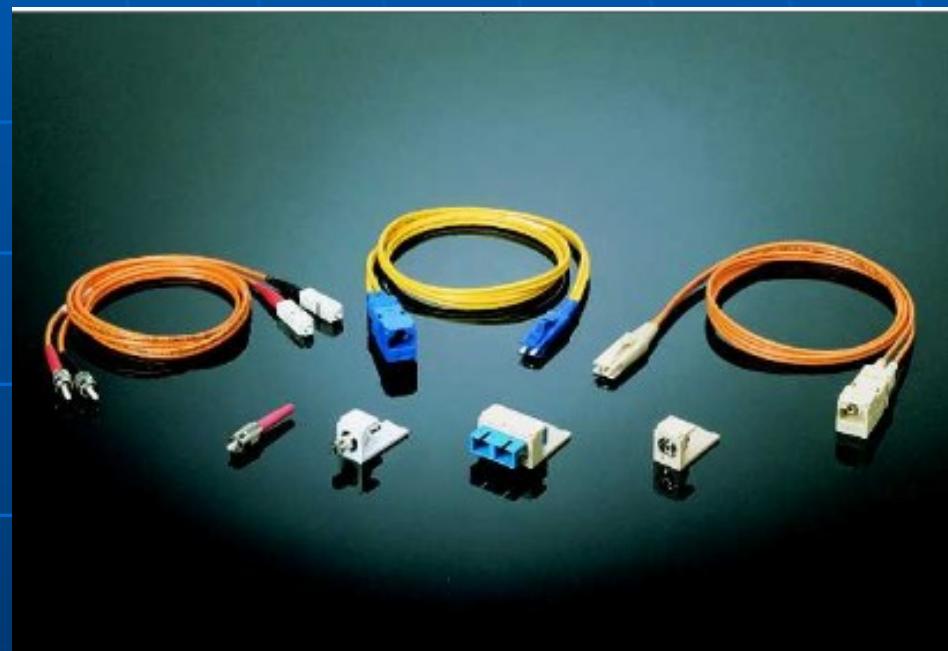

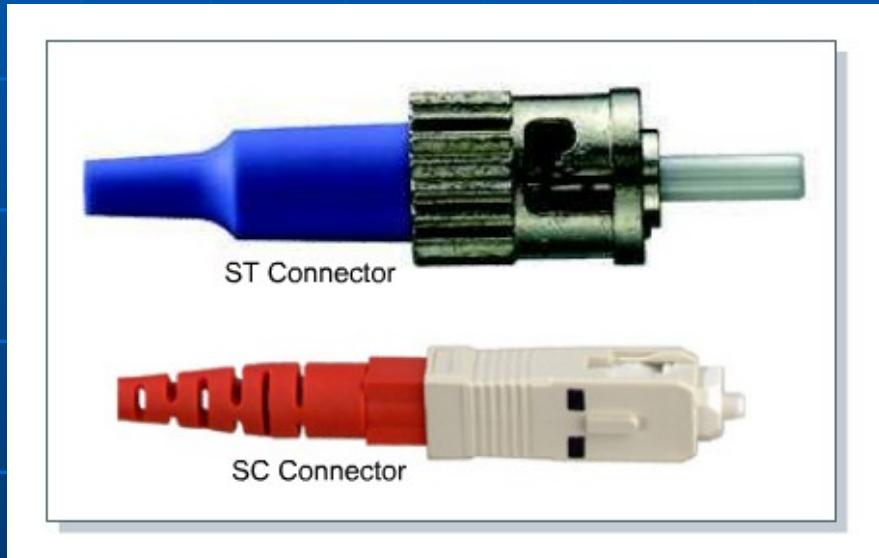

Multiple paths-sloppy

- Coating
- Glass Core 50 or 62.5 microns
- Glass Cladding 125 microns dia.

- Larger core than single-mode cable (50 or 62.5 microns or greater)
- Allows greater dispersion and therefore, loss of signal
- Used for long distance application, but shorter than single-mode (up to ~2km, 6,560 ft)
- Uses LEDs as the light source often within LANs or distances of a couple hundred meters within a campus network

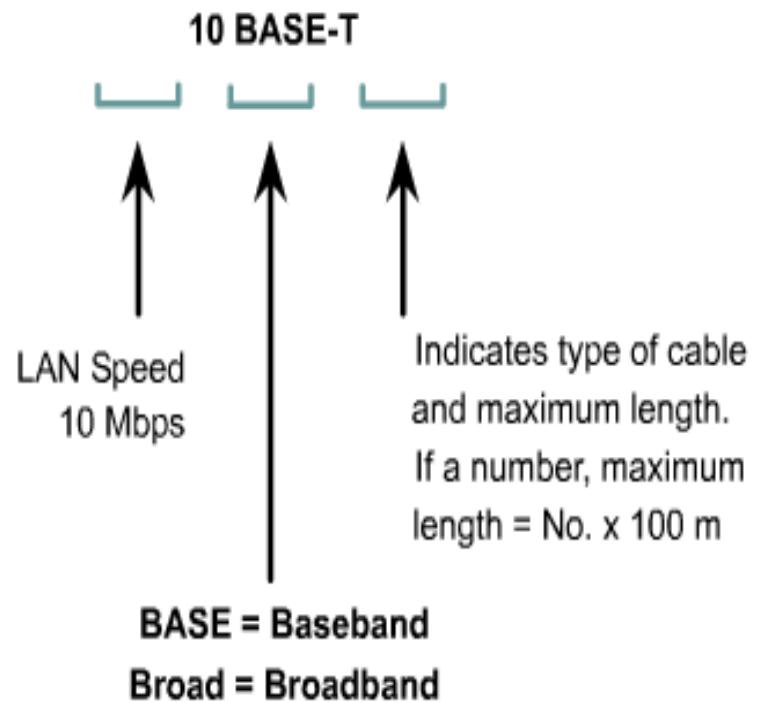

# Konektori za optičke kablove

Laserski zrak u single-mod optičkim kablovima može da izazove teška oštećenja oka !!!!

Some Typical Media	Maximum Theoretical Bandwidth	Maximum Physical Distance
50-Ohm Coaxial Cable (Ethernet 10Base2, ThinNet)	10-100 Mbps	200m
75-Ohm Coaxial Cable (Ethernet 10Base5, ThickNet)	10-100 Mbps	500m
Category 5 Unshielded Twisted Pair (UTP) (Ethernet 10BaseT, 100Base-TX)	10 Mbps	100m
Category 5 Unshielded Twisted Pair (UTP) (Ethernet 100Base-TX)(Fast Ethernet)	100 Mbps	100m
Multimode (62.5/125um) Optical Fiber 100Base-FX	100 Mbps	2000m
Singlemode (10um core) Optical Fiber 1000Base-LX	1000Mbps (1.000 Gbps)	3000m
Other technologies being researched	2400 Mbps (2.400 Gbps)	40km = 40,000m
Wireless	2.0 Mbps	100m

# Mrežni adapter - NIC network interface card

© Cisco Systems, Inc. 1999

- LAN adapter
- Komunicira sa mrežom preko serijske konekcije a sa računarom preko paralelne konekcije
- Zahtjevaju IRQ i I/O adresu

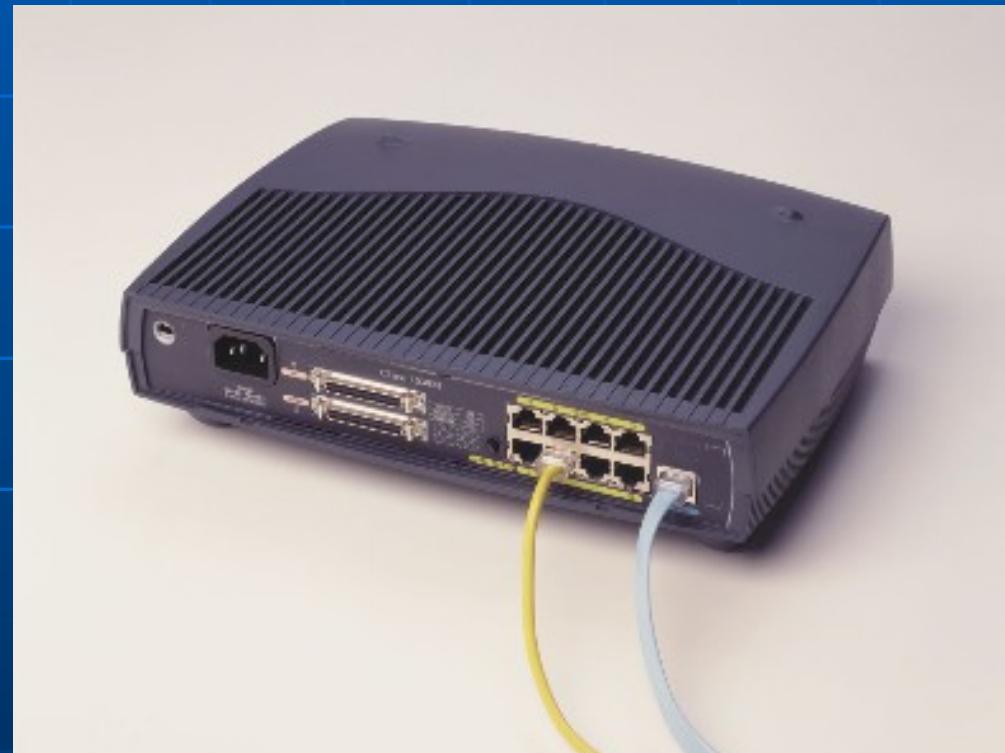

# Hub

- Regeneriše signal
- Koristi se kao mjesto koncentracije
- Ne filtrira saobraćaj
- Ne definiše put podacima
- Naziva se i multiport repeater

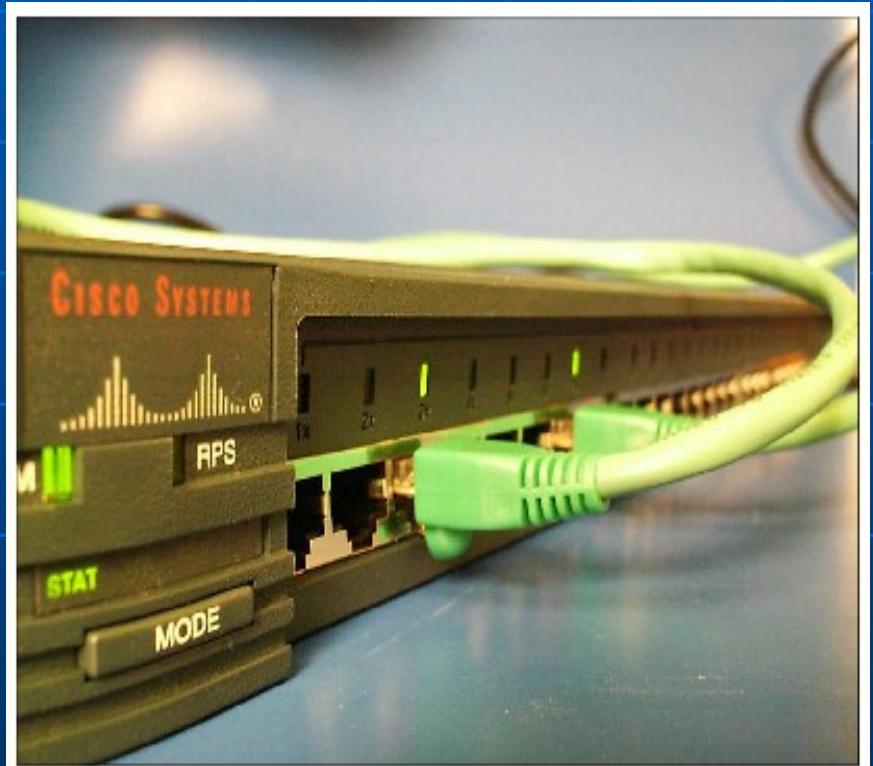

# Hub

- Uređaji priključeni na HUB primaju sav saobraćaj koji prolazi kroz HUB
- Više priključenih uređaja - veća vjerovatnoća da će doći do kolizije
- Uređaji priključeni na isti mrežni segment su u jednom kolizionom domenu

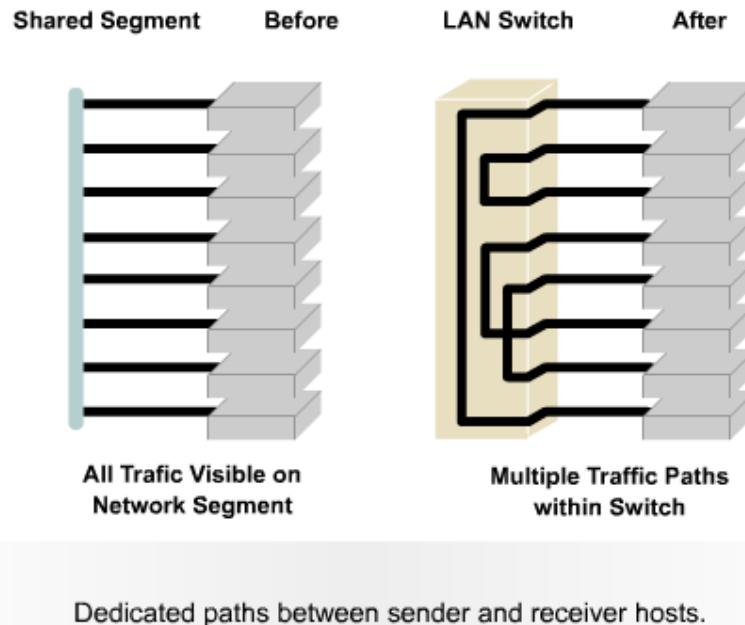

# Switch

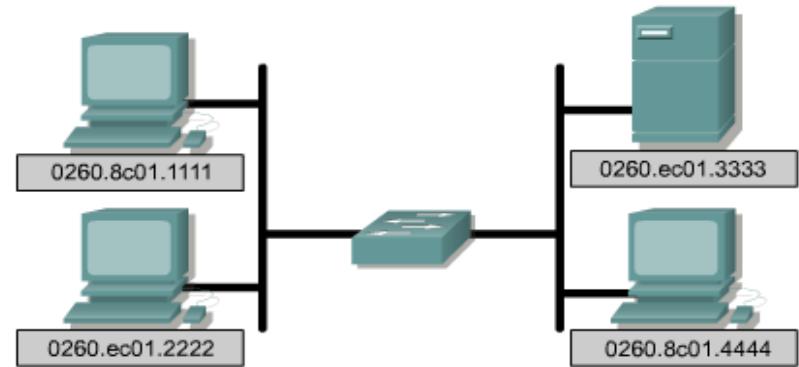

- Koriste se kao mjesto koncentracije
- Kombinuju konektivnost HUB-a i mogućnost regulacije bridge-a
- Obezbjeduju odvojene puteve za podatke

# Switch

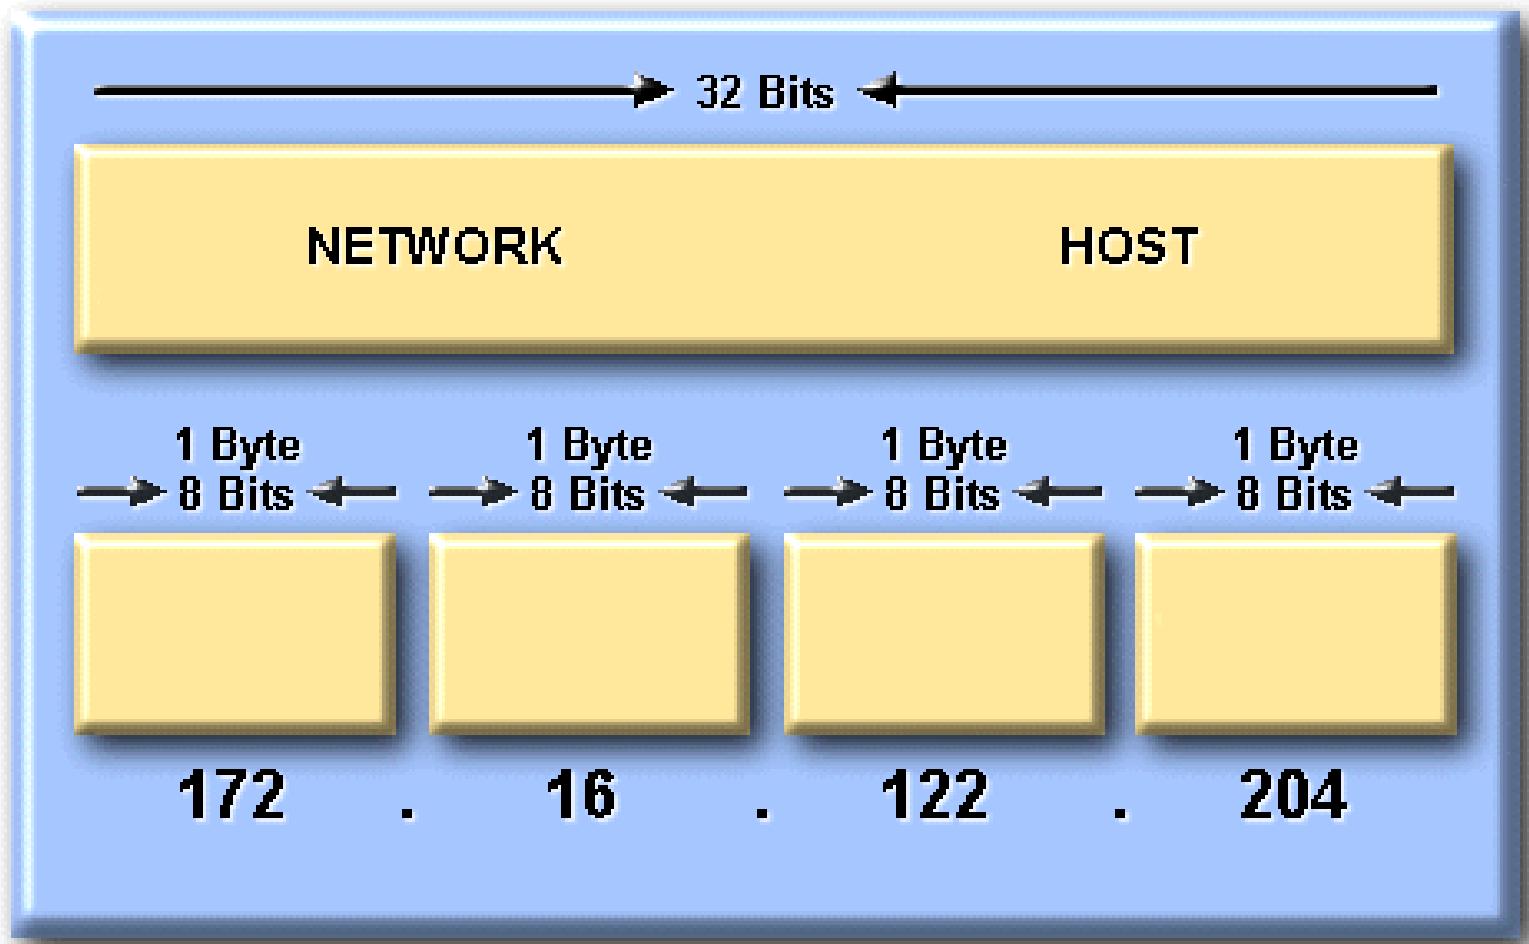

Interface	MAC Address
E0	0260.8c01.1111
E0	0260.ec01.2222

Uspostavljanje puta  
namjenjenog komuniciranju  
dva uređaja

Pravljenje tabela na osnovu  
portova i MAC adresa

## IP Addressing

# IP adrese

- IP adresa sastoji se od 32 bita.
- Predstavljena je u četiri okteta.
- Sastoji se iz dva dijela:
  - mrežni ID
  - host ID

233.14.17.0

# Subnet Mask - Podmrežna maska

IP adresa 172.16.2.120

Subnet Mask

0000

Mrežna adresa

172.16.2.0

Mrežna adresa pomaže pri određivanju puta-rute

# Rezervisane adrese

- Broadcast adresa – koristi se za slanje podataka svim uređajima na mreži.
- Broadcast IP adresa se završava sa binarnim jedinicama u host dijelu IP adrese.

(decimalno 255 = binarno 11111111)
