

Z-skor

Vježbe VI

Z-skorovi

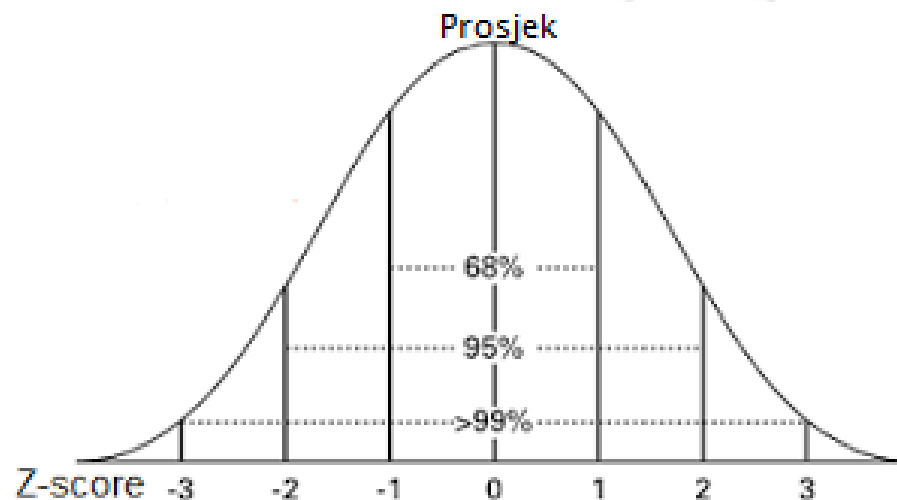

- ❑ Mjeri odstupanje od aritmetičke sredine
- ❑ Izražava se u jedinici standardne devijacije
- ❑ Ekstremne vrijednosti (outlier) smatraju se vrijednosti niže od -3 ili iznad +3
- ❑ Svrha: omogućiti smislenu komparaciju između odvojenih skupova podataka

- ❑ Formula:

$$Z = \frac{X - \bar{X}}{S}$$

Empirijsko pravilo

- $\mu \pm 1\sigma$ sadrži oko 68% vrijednosti u populaciji ili uzorku
- $\mu \pm 2\sigma$ sadrži oko 95% vrijednosti u populaciji ili uzorku
- $\mu \pm 3\sigma$ sadrži oko 99.7% vrijednosti u populaciji ili uzorku

Zadatak IV

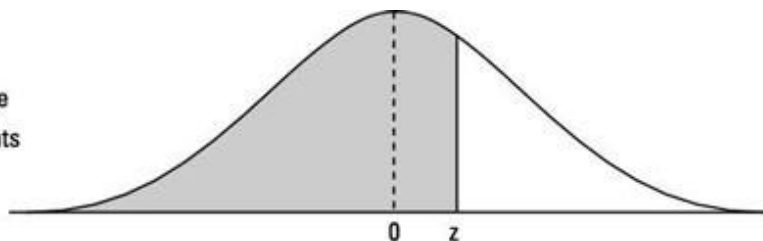

Distribucija rezultata ispita ima aritmetičku sredinu $\mu = 78$.

1. Ukoliko student dobije 70 poena, koja standardna devijacija bi mu dala bolju ocjenu: $SD = 4$ ili $SD = 8$.
2. Ukoliko student dobije 80 poena, koja standardna devijacija bi mu dala bolju ocjenu: $SD = 4$ ili $SD = 8$.
