

Zadatak:

Realizovati digitalni frekvencometar uz pomoć mikrokontrolerske razvojne ploče LV24-33. Signal čija se frekvencija mjeri predstavlja eksterni takt *Timer1*-a. Po definisanoj periodi *Timer1*-a PR1 generiše se prekid. Vrijeme T_x između dva prekida brojača mjeri *Timer23*. Frekvencija signala se računa kao $f=PR1/T_x$. Rezultat mjerenja prikazati na displeju. U cilju testiranja instrumenta, generisati signal frekvencije 500 Hz, pin RC3, koji će se voditi na ulaz frekvencometra, slika 1.
